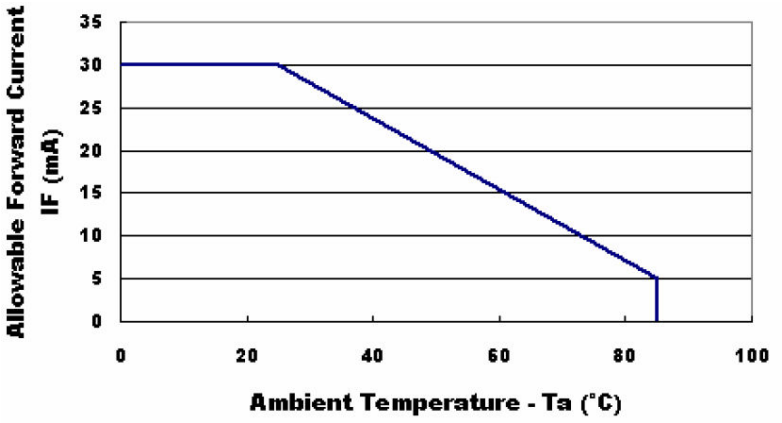
2. Absolute Maximum Ratings

Items	Symbol	Values		Unit	Condition
		Min.	Max.		
Power Voltage	VCC	-0.3	4	V	
LED Reverse Voltage	Vr		5	V	One LED
LED Forward Current	If		30	mA	One LED, Note 2

Note 1.If the operating condition exceeds the absolute maximum ratings, the TFT-LCD module may be damaged permanently. Also, if the module operated with the absolute maximum ratings for a long time, its reliability may drop.

Note 2. If LED current exceeds the limit curve, the lifetime will drop dramatically.



3. Electrical Characteristics

The following items are measured under stable condition and suggested application circuit.

a. TFT- LCD Panel (GND=0V)

Parameter	Symbol	Min	Typ	Max	Unit	Notes
Power Supply	VCC	2.8	3.3	3.6	V

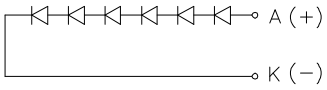
LED Supply Voltage	V_L		19.2		V	single serial
LED Life Time	L_L	10,000	---	---	Hr	Note 2, 3

Note 1: LED backlight is six LEDs serial type.



Note 2: The ”LED Supply Voltage” is defined by the number of LED at Ta=25°C, I_L=20mA. In the case of 6 pcs LED, V_L=3.2*6=19.2V

Note 3: The ”LED life time” is defined as the time for the module brightness to decrease to 50% of the initial value at Ta=25°C, I_L=20mA

Note 4: The LED lifetime could be decreased if operating $I_L$is larger than 25mA

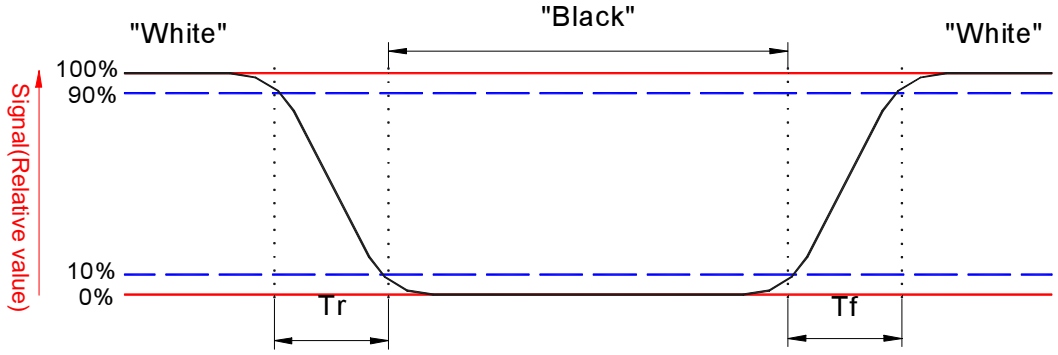
Note 1: Measurement should be performed in the dark room, optical ambient temperature =25°C, and backlight current I_L=20 mA

Note 2: To be measured on the center area of panel with a field angle of 1°by Topcon luminance meter BM-7, after 10 minutes operation.

Note 3: Definition of response time:

The output signals of photo detector are measured when the input signals are changed from “black” to “white”(falling time) and from “white” to “black”(rising time), respectively.



Note 4. From liquid crystal characteristics, response time will become slower and the color of panel will

become darker when ambient temperature is below 25°C.

Note 5. Contrast ratio is calculated with the following formula.

$$\text{Contrastratio} = \frac{\text{Photo detector output when LCD is at "White" state}}{\text{Photo detector output when LCD is at "Black" state}}$$

Note 6. White Vi=Vi50 μ 1.5V

Black Vi=Vi50 ± 2.0V

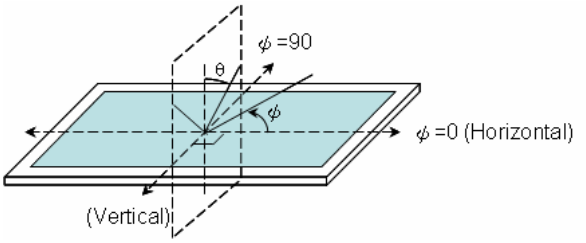
"±" means that the analog input signal swings in phase with COM signal.

"μ" means that the analog input signal swings out of phase with COM signal.

Vi50 :The analog input voltage when transmission is 50%

The 100% transmission is defined as the transmission of LCD panel when all the input terminals of module are electrically opened.

Note 7. Definition of viewing angle: refer to figure as below.



Note 8. The viewing angles are measured at the center area of the panel when all the input terminals of LCD panel are electrically opened.

Note 9. Brightness is measured at the center point of the display area.

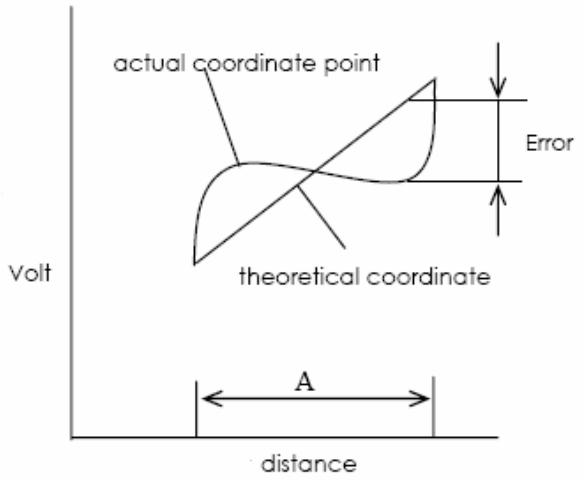
Linearity		-1.5%	1.5%	--	Note 1, test by 250 gf
Chattering			10	ms	At connector pin
Insulation Resistance		10M		Ω	DC 25V

Note 1: Measurement condition of Linearity: difference between actual voltage & theoretical voltage is an error at any points. Linearity is the value max. error voltage divided by voltage difference on active area.



2. Mechanical Characteristics

Item	Min.	Max.	Unit	Remark
Hardness of Surface	3	--	H	JIS K-5400
Operation Force (Pen or Finger)	--	100	gf	Note 1

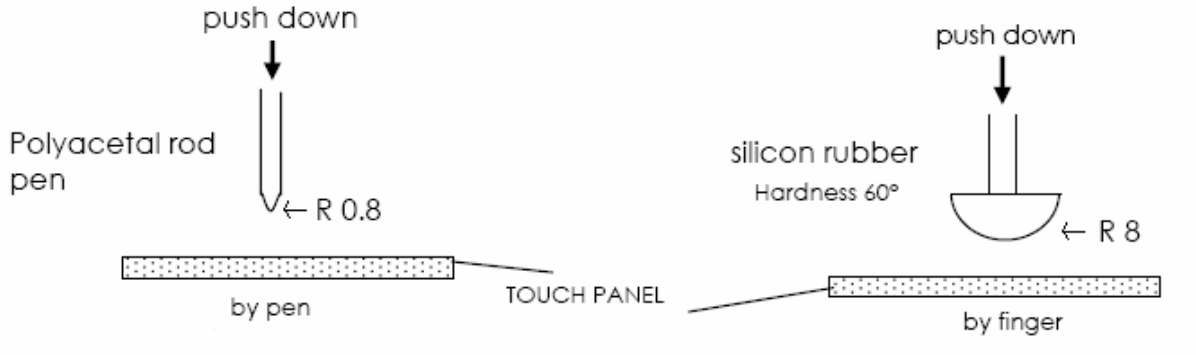
3. Life test Condition

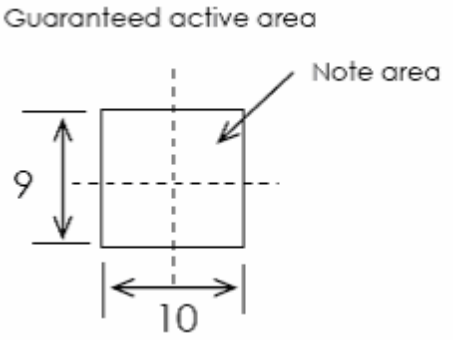
Item	Min.	Max.	Unit	Remark
Notes Life	10^5	--	words	Note 1, 2
Input Life	10^6	--	times	Note 1, 3

Note 1: Measurement condition of Operation Force: Within ”guaranteed active area”. Resistance,

Insulation resistance, and operation force should be under 5.2 & 5.3 condition. When user pushes down on the film, resistance between X & Y axis must be equal or lower than 2kΩ. Below is test figure.



Note 2: Notes Life test condition (by pen): Notes area for pen notes life test is 10×9 mm. Size of word is 7.5×6.75mm. Word is any A.B.C….. letter. Writing speed is 60mm/s. Center of each word is changed at random in notes area.



Note 3: Input Life test condition(by finger): By silicone rubber tapping at same point. Tapping Load is 200g, and tapping frequency is 5Hz.

4. Attention

Please pay attention for below matters at mounting design of touch panel of LCD module.

1. Do not design enclosure pressing the view area to prevent from miss input.
2. Enclosure support must not touch with view area.
3. Use elastic or non-conductive material to enclosure touch panel.
4. Do not bond film of touch panel with enclosure.
5. The touch panel edge is conductive. Do not touch it with any conductive part after mounting.
6. If user wants to cleaning touch panel by air gun, pressure 2kg/cm2 below is suggested. Not to blow glass from FPC site to prevent FPC peeled off.
7. Do not put a heavy shock or stress on touch panel and film surface. Ex. Don't lift the panel by film face with vacuum.

8. Do not lift LCD module by FPC.
9. Please use dry cloth or soft cloth with neutral detergent (after wring dry) or one with ethanol at cleaning. Do not use any organic solvent, acid or alkali liquor.
10. Do not pile touch panel. Do not put heavy goods on touch panel.
