Product Specification
1. General Description

The LD101WX1 is a Color Active Matrix Liquid Crystal Display with an integral LED backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally black mode. This TFT-LCD has 10.1 inches diagonally measured active display area with WXGA resolution (1280 horizontal by 800 vertical pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 6bit + 2bit FRC gray scale signal for each dot, thus, presenting a palette of 16,777,216 colors. The LD101WX1 has been designed to apply the interface method that enables low power, high speed, low EMI. The LD101WX1 is intended to support applications where thin thickness, low power are critical factors and graphic displays are important. In combination with the vertical arrangement of the sub-pixels, the LD101WX1 characteristics provide an excellent flat display.

The LCD Module is standard Industrial product which occurs possibility of Lamination Mura when using Direct bonding type Touch and cannot be modified In order prevent Mura. Lamination Mura require Pre-Matching with LCD module when Touch setting on set side.

General Features

Active Screen Size	10.1 inches diagonal
Outline Dimension	LCD : 228.96(H) × 148.5(V) × 2.5(D,Max), 4.8(D,Max. W/PCB) mm
Pixel Pitch	0.1695mm × 0.1695 mm
Pixel Format	1280 horiz. By 800 vert. Pixels RGB strip arrangement
Color Depth	6-bit + FPC, 16.7M colors
Luminance, White	400 cd/m ² (Typ.) / 320cd/m ² (min.)
Power Consumption	Total 3.02 W(typ.) (Logic :0.6 W (typ. @ Mosaic), B/L : 2.42W
Weight	145g (Max.)
Display Operating Mode	Transmissive mode, normally Black
Surface Treatment	Hard coat on polarizer
RoHS Compliance	Yes

2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Table 1. ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Values		Units	Notes
		Min	Max		
Power Input Voltage	VCC	-0.3	4.0	Vdc	at 25 ± 5°C
Operating Temperature	TOP	0	50	°C	1
Storage Temperature	HST	-20	60	°C	1

Note : 1. Temperature and relative humidity range are shown in the figure below.
Wet bulb temperature should be 39°C Max, and no condensation of water.

Product Specification

3. Electrical Specifications

3-1. Electrical Characteristics

The LD101WX1 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input which powers the LED BL.

Table 2. ELECTRICAL CHARACTERISTICS

Parameter	Symbol	Values			Unit	Notes
		Min	Typ	Max		
LOGIC :						
Power Supply Input Voltage	VCC	3.0	3.3	3.6	V	1
Power Supply Input Current	ICC	-	181	208	mA	2
Power Consumption	PCC	-	0.6	0.69	W	2
Power Supply Inrush Current	ICC_P	-	1500	3000	mA	
LVDS Impedance	ZLVDS	90	100	110	Ω	3
BACKLIGHT : (with LED Driver)						
LED Power Input Voltage	VDD+(VLED)	7	12	15	V	4
LED Power Input Current	ILED	-	202	205	mA	5
LED Power Consumption	PLED	-	2.42	2.46	W	5
LED Power Inrush Current	ILED_P	-		3000	mA	6
PWM Duty Ratio		5	-	100	%	7
PWM Jitter	-	0	-	0.2	%	8
PWM Frequency	FPWM	100	-	20000	Hz	
PWM High Level Voltage	LED_PWM_H	3.0	3.3	3.6	V	
PWM Low Level Voltage	LED_PWM_L		0		V	Ground
LED_EN High Voltage	LED_EN_H	3.0	3.3	3.6	V	
LED_EN Low Voltage	LED_EN_L		0		V	Ground

Product Specification

Note)

1. The measuring position is the connector of LCM and the test conditions are under 25°C , $f_v = 60\text{Hz}$, Black pattern.
2. The specified I_{cc} current and power consumption are under the $V_{cc} = 3.3\text{V}$, 25°C , $f_v = 60\text{Hz}$ condition and Mosaic pattern.

3. This impedance value is needed for proper display and measured from LVDS Tx to the mating connector.
4. The measuring position is the connector of LCM and the test conditions are under 25°C .
5. The current and power consumption with LED Driver are under the $V_{led} = 3.0\text{V}$, 25°C , Dimming of Max luminance and White pattern with the normal frame frequency operated (60Hz).
6. The below figures are the measuring V_{led} condition and the V_{led} control block LGD used.
 V_{LED} control block is same with V_{cc} control block.

7. The operation of LED Driver below minimum dimming ratio may cause flickering or reliability issue. The PWM resolution is 8bit (256 step).
8. This Spec. is not effective at 100% dimming ratio as an exception because it has DC level equivalent to 0Hz. In spite of acceptable range as defined, the PWM Frequency should be fixed and stable for more consistent brightness control at any specific level desired.

Product Specification
3-2. Interface Connections

This LCD employs two interface connections, a 44 pin connector used for the module electronics interface and the other connector used for the integral backlight system.

Pin	Symbol	Description	Notes
1	VCC	LCD Logic and driver power(3.3V)	[Connector] Socket(LGD): Panasonic AXE54412 Header: Panasonic AXE644124
2	VCC	LCD Logic and driver power(3.3V)	
3	VCC	LCD Logic and driver power(3.3V)	
4	IOVDD	Power supply for EDID (3.3V)	
5	NC	No connection	[Connector pin arrangement] 
6	GND	Ground	
7	GND	Ground	
8	NC	No connection	
9	LED_PWM	Back light LED driver PWM (equal to IOVDD level)	[LCD Module Rear View] 
10	SDA	DDC Data (Only for EDID) (equal to IOVDD level)	
11	SCL	DDC clock (Only for EDID) (equal to IOVDD level)	
12	LED_EN	LED enable input level (equal to IOVDD level)	
13	GND	Ground	
14	NC	NC	
15	LVDS 0-	LVDS0 data negative signal	
16	NC	NC	
17	LVDS 0+	LVDS0 data positive signal	
18	NC	No connection	
19	GND	Ground	
20	VDD-	Ground	
21	LVDS 1-	LVDS1 data negative signal	
22	VDD-	Ground	
23	LVDS 1+	LVDS1 data positive signal	
24	VDD-	Ground	
25	GND	Ground	
26	VDD-	Ground	
27	LVDS 2-	LVDS2 data negative signal	
28	VDD-	Ground	
29	LVDS 2+	LVDS2 data positive signal	
30	NC	No connection	
31	GND	Ground	
32	VDD+	Power supply for LED (12V)	
33	LVDS CLK-	LVDS Clock negative signal	
34	VDD+	Power supply for LED (12V)	
35	LVDS CLK+	LVDS Clock positive signal	
36	VDD+	Power supply for LED (12V)	
37	GND	Ground	
38	VDD+	Power supply for LED (12V)	
39	LVDS 3-	LVDS3 data negative signal	
40	VDD+	Power supply for LED (12V)	
41	LVDS 3+	LVDS3 data positive signal	
42	NC	No connection (LGD Only)	
43	GND	Ground	
44	NC	No connection (LGD Only)

3-7. Power Sequence for LCD

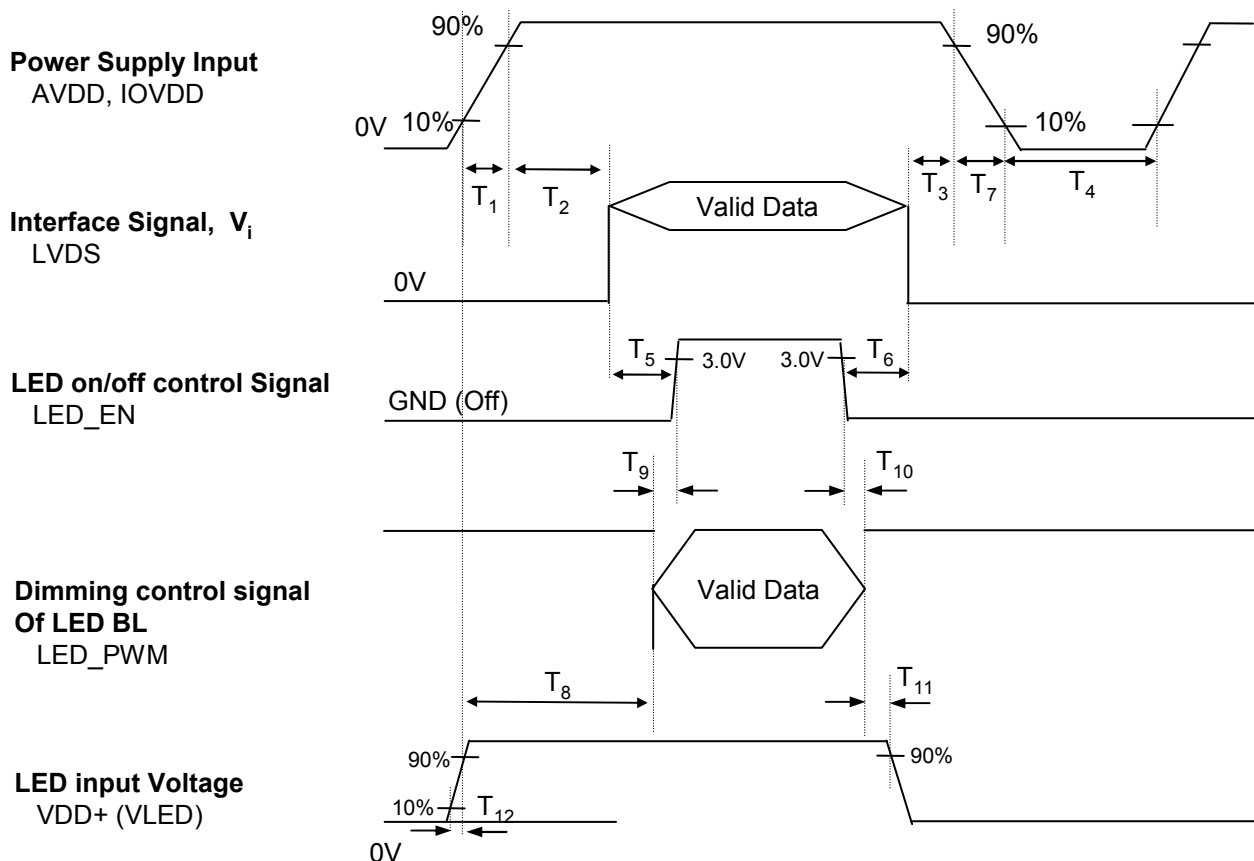

Table 6. POWER SEQUENCE TABLE

Logic Parameter	Value			Units	LED Parameter	Value			Units
	Min.	Typ.	Max.			Min.	Typ.	Max.	
T ₁	0.5	-	10	ms	T ₈	10	-	-	ms
T ₂	0	-	50	ms	T ₉	0	-	-	ms
T ₃	0	-	50	ms	T ₁₀	0	-	-	ms
T ₄	400	-	-	ms	T ₁₁	10	-	-	ms
T ₅	300	-	-	ms	T ₁₂	0.5	-	-	ms
T ₆	200	-	-	ms					
T ₇	3	-	10	ms					

Note)

1. Do not insert the mating cable when system turn on.
2. Valid Data have to meet "3-3. LVDS Signal Timing Specifications"
3. LVDS, LED_EN and PWM need to be on pull-down condition on invalid status.
low status of LED_EN needs to be set as ground. Floating LED_EN makes LED_EN high at the same time with AVDD rising time
4. If wave form is not served as PWM, PWM keeps status as a high level.

Product Specification

4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 30 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and Θ equal to 0°.

FIG. 1 presents additional information concerning the measurement equipment and method.

FIG. 1 Optical Characteristic Measurement Equipment and Method

y axis, down ($\Phi=270^{\circ}$)	Θ_d	85	-	-	degree	
Gray Scale			2.2			

Product Specification

Note)

1. Contrast Ratio(CR) is defined mathematically as

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

2. Surface luminance is the center point across the LCD surface 50cm from the surface with all pixels displaying white.

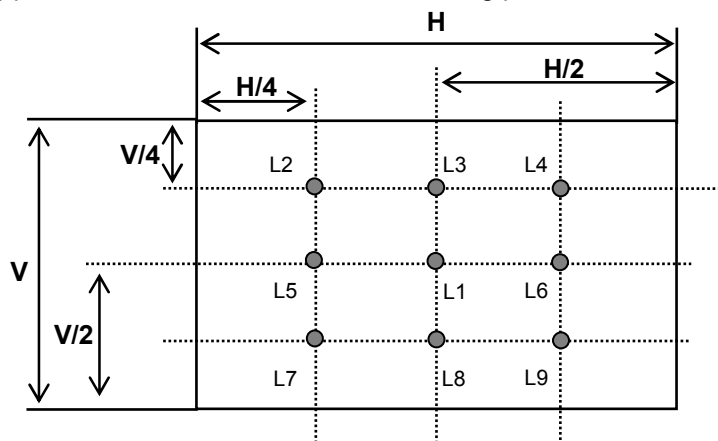

3. Luminance % uniformity is measured for 9 point For more information see FIG 2..

$$\delta 9 = \frac{\text{Minimum}(L1, L2, \dots L9)}{\text{Maximum}(L1, L2, \dots L9)}$$

4. Response time is the time required for the display to transition from white to black (rise time, Tr_R) and from black to white(Decay Time, Tr_D). For additional information see FIG 3.
5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.

FIG. 2 Luminance

<measuring point for surface luminance & measuring point for luminance variation>

* H, V : ACTIVE AREA

FIG. 3 Response Time

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

This is subject to change without prior notice.

8-2. Packing Form

a) Package quantity in one box : 20 pcs

b) Box Size : 355 mm x 468 mm x 220 mm

9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt mounting structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaked with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :
 $V = \pm 200\text{mV}$ (Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)
And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.

9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.
It is recommended that they be stored in the container in which they were shipped.

9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.
Please carefully peel off the protection film without rubbing it against the polarizer.
- (3) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- (4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
