1.0 GENERAL DESCRIPTION

1.1 Introduction

EV101WXM-N80 is a color active matrix TFT LCD module using amorphous silicon TFT 's (Thin Film Transistors) as an active switching devices. This module has a 10.1 inch diagonally measured active area with WXGA resolutions (1280 horizontal by 800 vertical pixel array). Each pixel is divided into RED, GREEN, BLUE dots which are arranged in vertical stripe and this module can display 16.2M colors.

1.2 Features

- 1 Port LVDS Interface Input;
- 6+2bit color depth, display 16.2M colors
- Thin and light weight
- High luminance and contrast ratio, low reflection and wide viewing angle
- RoHS compliant

1.3 Application

- Medical Monitor

1.4 General Specification

The followings are general specifications at the EV101WXM-N80-3850

<Table 1. LCD Module Specifications>

Parameter	Specification	Unit	Remarks
Active Area	216.96 (H) × 135.6(V)	mm	
Number Of Pixels	1280(H)×800(V)	pixels	
Pixel Pitch	56.5(H) × RGB × 169.5(V)	um	
Pixel Arrangement	Pixels RGB stripe arrangement		
Display Mode	Normally Black		
Display Colors	16.2M	colors	6+ FRC
Surface Treatment	Normal		
Contrast Ratio	900:1(Typ.); 700:1(Min.)		
Viewing Angle(CR>10)	85/85/85/85(Typ.); 80/80/80/80(Min.)	deg.	
Response Time	30(Typ.); 40(Max.)	ms	
Color Gamut	48%(Typ.); 43%(Min.)		
Brightness	400 nit(Typ.); 340 nit(Min.)	cd/m2	
Brightness Uniformity	9 point: min 65% (Before RA) 9 point: min 60% (After RA)		
Power Consumption	3.4(Typ.)	watt	
Outline Dimension	233.2(H)*152.9(V)*6.70(typ)(LCM)	mm	
Weight	505	gram	
Display Orientation	Landscape Only

2.0 ABSOLUTE MAXIMUM RATINGS

The followings are maximum values which, if exceed, may cause faulty operation or damage to the unit. The operational and non-operational maximum voltage and current values are listed in Table 2.

< Table 2. Absolute Maximum Ratings >

Parameter		Symbol	Min.	Max.	Unit	Remarks
Power Supply	LCD Module	VDD	VSS-0.3	4.0	V	Ta = 25 °C
	BLU	VLED	VSS-0.3	13.2	V	
		PWM	VSS-0.3	6	V	
		BRTC	VSS-0.3	6	V	
Operating Temperature		T _{OP}	-20	+70	°C	Note 1
Storage Temperature		T _{ST}	-30	+80	°C	

Note :

1. Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be 39 °C max. and no condensation of water.

PRODUCT GROUP		REV	ISSUE DATE	BOE

3.2 Back-Light Unit

Table 4. LED Driver Electrical Specifications >

[Ta =25±2 °C]

Parameter		Symbol	Values			Unit	Notes
			Min.	Typ.	Max.		
BLU Supply Voltage		VDD	11.5	12	12.5	V	
BLU Forward Current		I _{VDD}	-	220	280	mA	
Power Consumption		P _{LED}	-	2.6	-	W	Note 1
BLU BRTC Level		BLU ON	3.0	3.3	3.6	V	
		BLU OFF	0		0.5	V	
PWMIN	Level	High Level	3.0	3.3	3.6	V	
		Low Level	0		0.5	V	
	Frequency	F _{PWM}	180	200	10K	Hz	
	Duty Ratio	D _{PWM}	5	-	100	%	
LED Life Time		TLED	30000	-	-	Hrs	Note 2/3

Notes:

1. PLED = VDD × I_{VDD} (Without LED converter transfer efficiency)
2. The life time of LED, 30,000Hrs, is determined as the time at which luminance of the LED is 50% compared to that of initial value at the typical LED current on condition of continuous operating at 25 ± 2°C.
3. Only under the above operating conditions could the life time of LED be guaranteed.

4.0 OPTICAL SPECIFICATION

4.1 Overview

The test of Optical specifications shall be measured in a dark room (ambient luminance ≤ 1 lux and temperature = $25 \pm 2^\circ\text{C}$) with the equipment of Luminance meter system (Goniometer system and TOPCON BM-5) and test unit shall be located at an approximate distance 50cm from the LCD surface at a viewing angle of θ and Φ equal to 0° . The center of the measuring spot on the Display surface shall stay fixed.

The backlight should be operating for 30 minutes prior to measurement.

4.2 Optical Specifications

<Table 11. Optical Specifications >

Parameter		Symbol	Condition	Min.	Typ.	Max.	Unit	Remark
Viewing Angle Range	Horizontal	Θ3	CR>10	80	85	-	Deg.	Note1
		Θ9		80	85	-	Deg.	
	Vertical	Θ12		80	85	-	Deg.	
		Θ6		80	85	-	Deg.	
Contrast ratio		CR	Θ = 0°	700	900	-		Note2
Transmittance		Tr		4.6	5.4	-	%	Note3

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit	Remark
	Blue	Bx	0.123	0.153	0.183		
		By	0.086	0.116	0.146		
White Chromaticity	Wx	$\Theta = 0^\circ$	0.283	0.313	0.343		
	Wy		0.299	0.329	0.359		
Response Time (Rising + Falling)	$T_r + T_f$	Ta= 25° C $\Theta = 0^\circ$		30	40	ms	Note 7

Note:

1.Viewing angle is the angle at which the contrast ratio is greater than 10. The viewing angles are determined for the horizontal or 3, 9 o' clock direction and the vertical or 6, 12 o' clock direction with respect to the optical axis which is normal to the LCD surface (see FIGURE 1).

2.Contrast measurements shall be made at viewing angle of $\Theta = 0$ and at the center of the LCD surface. Luminance shall be measured with all pixels in the view field set first to white, then to the dark (black) state . (see FIGUR 1)
Luminance Contrast Ratio (CR) is defined mathematically.

$$CR = \frac{\text{Luminance when displaying a white raster}}{\text{Luminance when displaying a black raster}}$$

3.Transmittance is the Value without APF and without CG.

4.Center Luminance of white is defined as the LCD surface. Luminance shall be measured with all pixels in the view field set first to white. This measurement shall be taken at the locations shown in FIGURE 2 for a total of the measurements per display.

PRODUCT GROUP		REV	ISSUE DATE	BOE
TFT- LCD PRODUCT		P3	2019-03-14	
SPEC. NUMBER	SPEC. TITLE			PAGE
S8-*	B3 EV101WXM-N80 Product Specification			21 OF 32

5:Luminance measurement

The test condition is at ILED=20mA and measured on the surface of LCD module at 25 °C.

- The data are measured after LEDs are lighted on for more than 5 minutes and LCM di splays are fully white. The brightness is the average value of 9 measured spots. Measur ement equipment CS2000 or similar equipments(Field of view:1deg,Distance:50cm)
- Measuring surroundings: Dark room.
- Measuring temperature: Ta=25°C.
- Adjust operating voltage to get optimum contrast at the center of the display.
- Measured value at the center point of LCD panel must be after more than 5 minutes while backlight turning on.

$\Delta Y = (\text{Minimum Luminance of 9points} / \text{Maximum Luminance of 9points}) * 100$

6.The color chromaticity coordinates specified in the above table shall be calculated from the spectral data measured with all pixels first in red, green, blue and white. Measurements shall be made at the center of the panel.

7.The electro-optical response time measurements shall be made as FIGURE 2 by switching the “data” input signal ON and OFF. The times needed for the luminance to change from 10% to 90% is Tr, and 90% to 10% is Tf.

6.0 PACKING INFORMATION(产品形态:)

Packing procedure:

- 将1片产品竖向放入PE Bag
- PE Bag开口反折
- 将产品竖向插入卡槽内(1卡槽1片产品)
- 22pcs 产品/白色EPE Box

- 将EPE Bottom 放入纸箱后
- 再放置EPE Cover
- 22pcs 产品/纸箱

- 每个Pallet上放3层Box
- 1层4箱,共计12ea Box
- Pallet外进行缠膜包装
- 264pcs Panel / Pallet

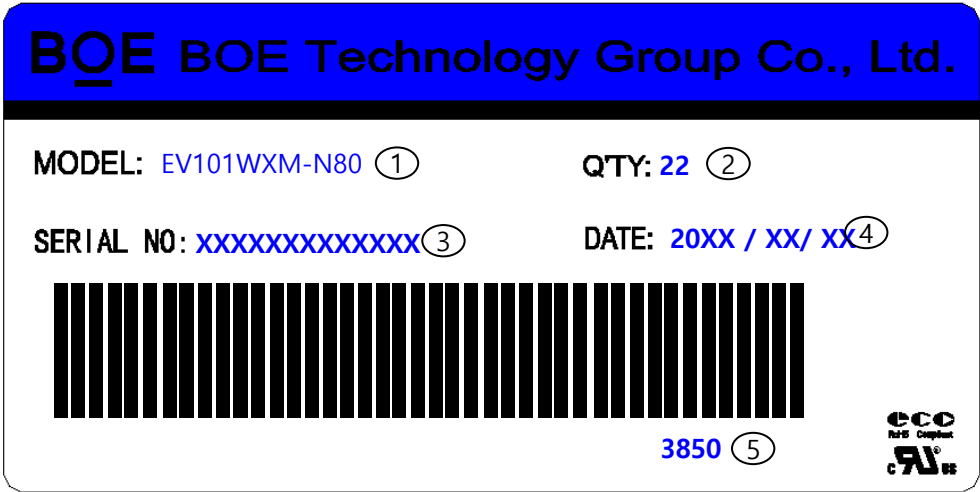

6.1 Packing Note(产品形态: LCM)

8.0 Handling & Cautions

8.1 Mounting Method

- The panel of the LCD consists of two thin glasses with polarizers which easily get damaged. So extreme care should be taken when handling the LCD.
- Excessive stress or pressure on the glass of the LCD should be avoided, and avoid scratching polarizer (The strength should not be more than that of HB pencil). Care must be taken to insure that no torsional or compressive forces are applied to the LCD unit when it is mounted.
- If the customer's set presses the main parts of the LCD, the LCD may show the abnormal display. But this phenomenon does not mean the malfunction of the LCD and should be pressed by the way of mutual agreement.
- To determine the optimum mounting angle, refer to the viewing angle range in the specification for each model.
- Mount a LCD module with the specified mounting parts.
- Avoid stressing PCB and Driver IC during the installation.
- Drawing or bending of the COF & wire in any process is avoided.
- Careful installation and handling are necessary to prevent damage to PCB circuit.
- Installation of heat dissipation structure should meet the temperature requirements.
- Touching or rubbing the POL surface with bare hands or oilcloth is not allowed.

8.2 Caution of LCD Handling and Cleaning

- Since the LCD is made of glass, do not apply strong mechanical impact or static load onto it. Handling with care since shock, vibration, and careless handling may seriously affect the product. If it falls from a high place or receives a strong shock, the glass may be broken.
- The polarizers on the surface of panel are made from organic substances. Be very careful for chemicals not to touch the polarizers or it leads the polarizers to be deteriorated.
- If the use of a chemical is unavoidable, use soft cloth with solvent (recommended below) to clean the LCD's surface with wipe lightly.
-IPA(Isopropyl Alcohol), Ethyl Alcohol, Trichlorotrifluoroethane
- Do not wipe the LCD's surface with dry or hard materials that will damage the polarizers and others. Do not use the following solvent.
-Water, Ketone, Aromatics
- It is recommended that the LCD be handled with soft gloves during assembly, etc. The polarizers on the LCD's surface are vulnerable to scratch and thus to be damaged by sharp particles.
- Do not drop water or any chemicals onto the LCD's surface.
- A protective film is supplied on the LCD and should be left in place until the LCD is required for operation.

PRODUCT GROUP		REV	ISSUE DATE	BOE
TFT- LCD PRODUCT		P3	2019-03-14	
SPEC. NUMBER	SPEC. TITLE			PAGE
S8-*	B3 EV101WXM-N80 Product Specification			28 OF 32

- The ITO pad area needs special careful caution because it could be easily corroded.
- Do not contact the ITO pad area with HCFC,Soldering flux,Chlorine,Sulfur,saliva or fingerprint. To prevent the ITO corrosion, customers are recommended that the ITO area would be covered by UV or silicon.
- Water/oil stains should be wiped immediately to prevent stains pollution and discoloration
- Surface dust could be wiped by hydrophilic cotton cloth or other soft materials (such as the light gasoline solvent soaked suede). The adherent dust should be cleaned by recommended n-hexane instead of acetone, ethanol and toluene, etc.

8.3 Caution Against Static Charge

- The LCD modules use C-MOS drivers, so customers are recommended that any unused input terminal would be connected to Vdd or Vss, do not input any signals before power is turn on, and ground you body, work/assembly area, assembly equipments to protect against static electricity.
- Remove the protective film slowly, keeping the removing direction approximate 30-degree not vertical from panel surface, If possible, under ESD control device like ion blower, and the humidity of working room should be kept over 50%RH to reduce the risk of static charge.The person who will tear off the protection film should wear anti-static wristband and the wristband should be grounded.
- Avoid the use work clothing made of synthetic fibers. We recommend cotton clothing or other conductivity-treated fibers.
- In handling the LCD, wear non-charged material gloves. And the conducting wrist to the earth and the conducting shoes to the earth are necessary.
- Grounding and shielding actions should be adopted to avoid electromagnetic interference.
- Connection line between the system board and PCB CNT should be as short as possible.
- Connectors are precise devices for connecting PCB and transmitting electrical signals. Operators should insert and unplug the pin connectors parallelly when assembling MDL.
- Bare-handed touching of the pin connector is not allowed.
- Stay away from the static electricity to avoid electrostatic damage.

8.4 Caution For operation

- It is indispensable to drive the LCD within the specified voltage limit since the higher Voltage than the limit causes the shorter LCD's life. An electro-chemical reaction due to DC causes undesirable deterioration of the LCD so that the use of DC drive should avoid.
- Never use the LCD under abnormal conditions of high temperature and high humidity.
- When expose to drastic fluctuation of temperature (hot to cold or cold to hot) ,the LCD may be affected; Specifically, drastic temperature fluctuation from cold to hot ,produces dew on the LCD's surface which may affect the operation of the polarizer and the LCD.
- Response time will be extremely delayed at lower temperature than the operating temperature range and on the other hand at higher temperature LCD may turn black at temperature above its operational range. However those phenomena do not mean malfunction or out of order with the LCD. The LCD will revert to normal operation once the temperature returns to the recommended temperature range for normal operation.
- Do not display the fixed pattern for a long time because it may develop image sticking due to the LCD structure. If the screen is displayed with fixed pattern, use a screen saver.
- Consultation is necessary if a long-time use for the same pattern were required.
- Consultation is necessary when under the non-specified using conditions.
- Extreme operating conditions (high temperature, high humidity, high altitude, special display mode, running time, etc.) should be consulted with the manufacturer, otherwise, reliability of the function may not be guaranteed. Extreme condition usually occurs at airports, stations, banks, stock markets, control systems, etc.
- Specified parameters can not be exceeded. (power supply voltage, input voltage, ambient temperature, etc.)
- Consultation is necessary for a long-time operation.
- Consultation is necessary for outdoor application
- Consultation is necessary when using the vertical mode. (The MDL should be rotated clockwise when using the vertical mode.)

8.5 Packaging

- Modules use LCD element, and must be treated as such.
 - Avoid intense shock and falls from a height.
 - To prevent modules from degradation, do not operate or store them exposed directly to sunshine or high temperature/humidity for long periods.

8.6 Storage

- Original protective film should be used on LCD' s surface (polarizer). Adhesive type protective film should be avoided, because it may change color and/or properties of the polarizers.
- Do not store the LCD near organic solvents or corrosive gasses.
- Keep the LCD safe from vibration, shock and pressure.
- In the case of storing for a long period of time for the purpose or replacement use, the following ways are recommended.
 - Store in a polyethylene bag with sealed so as not to enter fresh air outside in it.
 - It is recommended to be stored in a ventilated dark room to avoid illumination, UV- light and moisture entering and avoid water vapor entering.
 - Keep temperature in the specified storage temperature range.Recommended storage temperature range: 5-40°C, Environment humidity: 35-75%RH, Recommended storage time length: ≤6 Mons. It was recommended that baking process should be done after the product has been stored for a certain period of time. The suggestions are as follows:
 - ①. NO processing is needed when the storage period is less than 2 months;
 - ②. 50 C, 10% RH, 24 hr baking process is needed when the storage period is during 2-3 months;
 - ③. 50 C. 10% RH, baking 48 hr baking process is needed when the storage period .
 - Store with no touch on polarizer surface by the anything else. If possible, store the LCD in the packaging situation LCD when it was delivered.

8.7 Safety

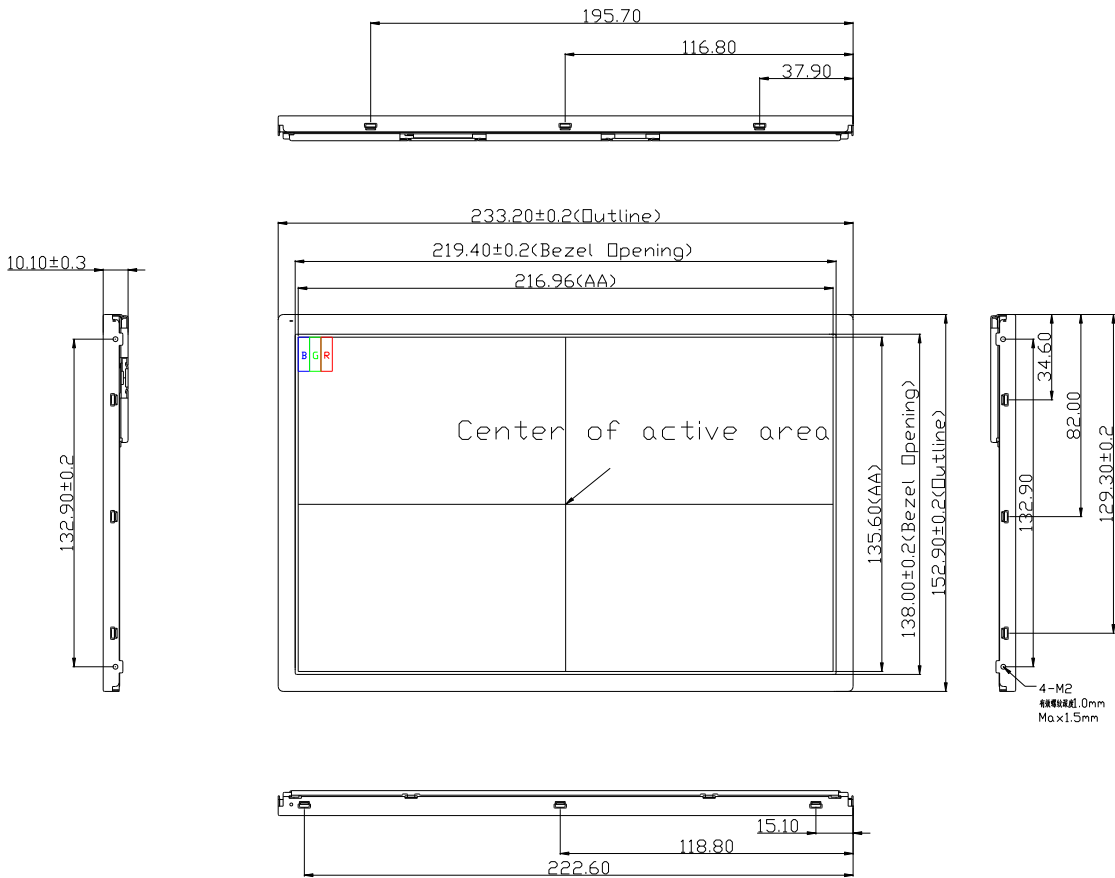

- For the crash damaged or unnecessary LCD, it is recommended to wash off liquid crystal by either of solvents such as acetone and ethanol an should be burned up later.
- In the case the LCD is broken, watch out whether liquid crystal leaks out or not. If your hands touch the liquid crystal, wash your hands cleanly with water an soap as soon as possible.
- If you should swallow the liquid crystal, first, wash your mouth thoroughly with water, then drink a lot of water and induce vomiting, and then, consult a physician.
- If the liquid crystal should get in your eyes, flush your eyes with running water for at least fifteen minutes.
- If the liquid crystal touches your skin or clothes, remove it and wash the affected part of your skin or clothes with soap and running water.
