Specification of FUJITSU TFT-LCD module

FLC38XGC6V-06

Approval
<p>Date :</p> <p>By :</p>

This Product is designed, developed and manufactured as contemplated for general use, including without limitation, general office use, personal use, household use, and ordinary industrial use, but is not designed, developed and manufactured as contemplated for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could lead directly to death, personal injury, severe physical damage or other loss (hereinafter "High Safety Required Use"), including without limitation, nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system. If customer's product possibly falls under the category of High Safety Required Use, please consult with our sales representatives in charge before such use. In addition, Fujitsu shall not be liable against the Customer and/or any third party for any claims or damages arising in connection with the High Safety Required Use of the Product without permission.

Specification No. : Tech Bes LCD-00050

Issue Date : Oct. 30, 2001

Issued by :

T. Naka

Director

LCD Design Dep.

LCD Technology Div.

LCD Group

FUJITSU LIMITED

REVISION HISTORY

Revision	Date	Prepared	Checked		Approved	Summary
01A	Sep.26,2000	M.Miyahara	M.Fukuhara		T.Naka	1st issue
02B	Jul.06,2001	M.Miyahara	M.Fukuhara	T.Minemura	T.Naka	Change connection method to ACF, Color Filter, and position of Gasket. Apply to NA19020-C281.
02B	Oct.30,2001	M.Miyahara	M.Fukuhara	T.Minemura	T.Naka	Add ACF to connection method, change Color Filter. Apply to NA19020-C281 only.

Note 6) Definition of Optimum Viewing Angle

Based on Fig.9-7.

Fig.9-7. Definition of Viewing AngleNote 7) Definition of Brightness Uniformity

Brightness uniformity is defined by the following formula.

Brightness (I1~I9) are measured at the following 9 points (① ~ ⑨) on the display area shown in Fig.9-8.

$$\text{Brightness Uniformity } (\Delta L) = \frac{|\text{Min. In}|}{|\text{Max. In}|} \times 100 (\%), n=1 \text{ to } 9$$

Note) Each measurement point (① ~ ⑨) defines the center spot of Brightness Meter view.
The tolerance of measurement position is $\pm 5\text{mm}$.

Fig.9-8. Measurement Points

Fig.10-4. Correspondence Data and Display Position												
10-5. Power Supply Sequence												
The sequence of input signals and On/Off of the power supply of this LCD module should be in the specification shown in Fig.10-4 to prevent latch-up of the driver ICs and DC driving of the LCD panel.												
<p>The diagram shows two waveforms: Vcc and Input signal. Vcc transitions from OFF (0V) to ON (4.75V) with a rise time T4 ≤ 20ms, and from ON (4.75V) to OFF (0V) with a fall time T5 ≤ 20ms (Voltage descent). The Input signal transitions from L to H with a rise time T1 (10% to 90%) and from H to L with a fall time T2 (90% to 10%). Both T1 and T2 are constrained to 10ms ≤ T1 ≤ 40ms and 10ms ≤ T2 ≤ 40ms. A third transition T3 is shown from H to L with a constraint 0ms ≤ T3 ≤ 40ms. A low-level pulse on Vcc is shown with a width of 0.1s ≤ T6 and a level of 0.5V. High-level levels are 4.75V and a low-level level is 4.5V.</p>

14. INDICATIONS									
This module has the following indications.									
A	(1) Product name		: LCD unit						
	(2) Model number		: FLC38XGC6V-06						
	(3) Product drawing number		: NA19020-C281 or NA19020-C291						
	(4) Manufacturing number		: 8 Y 0 0 0 0 1						
B							Serial number (To be reset every month on 1st.)		
							Manufacturing month (Oct. = X, Nov. =Y, Dec. =Z)		
							Last digit of manufacturing year.		
C	(5) Version number		: 01A (Example)						
			-1st 2 digits “01” means operational version.						
			-3rd alphabet means functional version.						
	(6) Country of origin		: MADE IN JAPAN (NA19020-C281) MADE IN TAIWAN(NA19020-C291)						
D	(7) Company name		: FUJITSU LIMITED						
	(8) Disposal method of cold-cathode tubes. (See Fig.14-1)								
	(9) Caution when changing cold-cathode tubes. (See Fig. 14-2)

16. WARRANTY

The warranty period is one year after manufacturing. Products which fail during this period are repaired or replaced without charge, unless the failure is caused by user.

17. PRECAUTIONS

Adhere to the following precautions to properly use this LCD module.

④ (1) Fail safe design

LCD module has an inherent chance of failure. Customers must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

(2) Handling of LCD panel

Do not apply any strong mechanical shock to the LCD panel.

Since the LCD panel is made of glass, excessive shock may damage the panel or cause a malfunction.

Do not press hard on the LCD panel surface.

In the LCD panel, the gap between two glass plates is kept precisely and uniformly to maintain display's characteristics and reliability. If this panel is pressed hard, the following troubles occurs.

- Ununiformity of color
- Orientation of liquid crystal becomes disordered

Problem (a) returns to normal after a while. Problem (b) returns to normal if power is shut off once then turned on again.

However these operations should be avoided to insure reliability.

Do not scratch the polarizer film on the LCD panel surface.

- Do not press or rub the display surface with a hard tool, pincet, etc.
- For handling, use cotton or conductive gloves so that the display surface is not stained.
- For If the display surface is stained by dust or dirt, clean it as follows with a soft cloth (deer skin, etc.)

[Dust] Wipe off with a soft cloth. (do not rub.)

[Dirt] Wipe off lightly with a soft cloth after soaking in the clear water and squeezing hard out of water drops. Only if the dirt is hardly wiped off, use isopropyl alcohol or ethanol.

Be careful not to splash the water or the solvent and water penetrated between the polarizer and the LCD panel.

Do not use solvents such as ketone (acetone, etc.) and aromatics (xylene, toluene, etc.)

- If saliva or water drops are left for long time, it may deform partial deformation or discolored. Wipe off immediately in the same way as for dirt.
- Do not allow oil to adhere to the module, since the cleaning of oil is difficult.

Do not place or contact objects on the display surface for a long period of time.

That's because this may make some parts of the LCD module distorted and the display quality may decline.

DATE	DOCUMENT CONTROL SECTION	<p>the polarizer and the LCD panel.</p> <p>Do not use solvents such as ketone (acetone, etc.) and aromatics (xylene, toluene, etc.)</p> <ul style="list-style-type: none">• If saliva or water drops are left for long time, it may deform partial deformation or discolored. 		1			2			3			4
【FLC38XGC6V-06】											
A	(5) Precautions on designing module mounting Do not press the display surface and bottom face of the LCD module. Display quality or reliability may be deteriorated if the installation of the LCD module is inappropriate and, as a result, excessive pressure is applied to the surface of LCD screen. Brightness uniformity or the reliability of CCFL may decrease if the pressure is applied to the backlight module.										
	Consider the module mounting design, so that twisting and bending do not occur to the LCD module. Excessive twisting and bending may damage display quality and reliability.										
	The power cable length between the LCD module and inverter should not be extended. Otherwise the backlight may not light or flickering may occur.										
B	Do not make the power cable of the backlight clung to a metal plate, etc. Backlight frequency current for backlight driving may leak to the metal and desired brightness may not be assured.										
	When Mounting LCD module with M4 screw (x4) should be screw up under 5.75kgf torque.										
C	(6) Storage method Do not store the LCD module in an atmosphere of organic solvent or corrosive gas. In an organic solvent atmosphere, the polarizer film discolors and display quality deteriorates. In a corrosive gas environment, various problems may occur.										
	Store the LCD module in a Fujitsu package. At storing, Fujitsu packages can be stacked up to 4 boxes. The LCD module is in an anti-static bag. Keep the module in that status.										
	It is recommended that the storage environment should be humidity controlled, cool and dark. Recommended storage environment ・Place :Dark (avoid direct sunlight) ・Temperature : 10~35°C ・Humidity : 50~60%RH										
	Note) If the module is left in an environment of 60 or more for a long period of time, optical characteristics may deteriorate.										
D	④ (7) Others ! If the LCD panel is damaged, do not inhale or allow the liquid crystal to enter the mouth If the liquid crystal contacts the body or cloths, wash it off with soap immediately. Follow precautions for regular electronic components.										
	Solder flux on the printed circuit board is harmless to the quality and reliability of LCD module. Fujitsu is practicing non-wash technology on module assembly process.
