Specification of FDTC TFT-LCD module

FLC48SXC8V-11AA

Approval
Date : By :

This Product is designed, developed and manufactured as contemplated for general use, including without limitation, general office use, personal use, household use, and ordinary industrial use, but is not designed, developed and manufactured as contemplated for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could lead directly to death, personal injury, severe physical damage or other loss (hereinafter "High Safety Required Use"), including without limitation, nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system. Fujitsu shall not be liable against the Customer and/or any third party for any claims or damages arising in connection with the High Safety Required Use of the Product without permission.

Specification No. : Tech Bes LCD-00267

Issue Date : July. 8, 2004

8. ELECTRICAL SPECIFICATIONS

Table 8-1 shows the electrical specifications of this LCD module. Figure 8-1 shows the measurement circuit. Figure 8-2(A) shows the equivalent circuit of the logic signal input area. Figure 8-2(B) shows the equivalent circuit of the supply voltage Input area.

Table 8-1 Electrical Specifications

Item	Symbol	Condition	MIN.	TYP.	MAX.	Unit	Remark
Differential-input Voltage (Hign)	V _{IH}	V _{CM} =+1.2V	—	—	100	mV	
Differential-input Voltage (Low)	V _{IL}		-100	—	—	mV	
Input Voltage (High)	V _{IH}	V _{CC} =+5.0±0.25V V _{SS} =0V DCLK=54MHz Ta=25° C	2.0	—	3.3	V	PD SEL LVDS
Input Voltage (Low)	V _{IL}		0	—	0.8	V	
Supply Current	I _{CC}		—	900	1500	mA	*1
Supply Rush Current	I _{SCC}		—	—	3.5	A	*2
Supply Rush Current Duration(1.5A excess)	T _{SCC}		—	—	1.0	ms	
BACK LIGHT (*3)	CCFL Turn on Voltage	V _S	f _L =50kHz, Ta=25°C	—	1400	1600	V _{rms}
		V _S	f _L =50kHz, Ta=0°C	—	1500	1600	
LIGHT	Lighting Voltage	V _L	f _L =50kHz I _L =7mA	—	750	—	V _{rms}
	Lighting Frequency	f _L	V _L =750V _{rms}	40	50	60	kHz
D	Tube Current	I _L	f _L =50kHz V _L =750V _{rms}	4	7	8	mArms
							*4

(*1) Typical current situation : Color bar pattern. V_{CC}=5.0V
Maximum current situation : White pattern. V_{CC}=4.75V
Without rush current.

(*2) These items prescribe the rush current for starting internal DC/DC.
Charging current to capacitors of V_{CC} is not prescribed.

(*3) Back-light specifications are valid when using a suitable inverter such as the FLCV-13

(*4) Tube current (I_L) shows the value of the current that is consumed at one lamp.
This LCD module has 4 lamps. Each 2 lamps are placed at upper side and lower side of the display.
2 lamps is connected in parallel. Each low voltage terminals are connected with separate cable to Back-light connector.

Note 6) Definition of Optimum Viewing Angle

Figure 9-6 Definition of Viewing Angle

Note 7) Definition of Brightness Uniformity

Brightness uniformity is defined by the following formula.

Brightness (I1 ~ I9) are measured at the following 9 points (1 ~ 9) on the display area that is shown in Figure 9-7.

$$\text{Brightness Uniformity (L)} = \frac{|\text{Min. In}|}{|\text{Max. In}|} \times 100 (\%), n = 1 \text{ to } 9$$

Note) Each measurement point (1 ~ 9) defines the center spot of view of Brightness Meter.
The tolerance of measurement position is $\pm 3\text{mm}$.

Figure 9-7 Measurement Points

11. BACK-LIGHT SPECIFICATIONS

11-1 Pin configuration for Back-light

Table 11-1 shows the description and Pin assignment of the connectors (CN-A to D) for the Back-light of this LCD module.

Table 11-1 Pin Assignment of CN-A to CN-D

Pin	Signal				Function	Cable color
	CN-A	CN-B	CN-C	CN-D		
1	V _{L1}	V _{L2}	V _{L3}	V _{L4}	Power supply	Pink ,Orange
2	—	—	—	—	—	—
3	GND	GND	GND	GND	Ground	Blue, Gray

Connector : Housing : BHR-03VS-1
 Contact : SBH-001T-P0.5
 User's Connector : Post with base: SM02(8.0)B-BHS-1-TB
 Supplier : Japan Solderless Terminal Trading Company LTD. (J.S.T.)

11-2 Life

The life of the back-light is a minimum of 50,000 hours at the following conditions.

(1) Working conditions

Ambient temperature: 25 ± 5
 Tube current (I_L) : 7mA or less

(2) Definition of life

Brightness becomes 50% or less than the minimum brightness value shown in Table 9-1.
 The lamp cannot be lit by the minimum value of the breakdown voltage(1760Vrms) shown in Table 8-1.
 Flashing.

11-4 Lamp assembly set (for replacement)

Lamp assembly set(with charge)is prepared for replacing old lamp to new one.
 This set consists of a upper lamp assembly and a lower lamp assembly.

Type number : FLCL-33
 Minimum order qty. unit : 20 pcs.

B

12-2-2 Bright spots

(1) Bright spots by the defect of TFT.

- Visible under bias of 2% ND filterHigh bright spot R•G
- Visible under 5% but invisible under 2% ND filterLow bright spot R•G•B
- Invisible under bias of 5% ND filter.....Not counted

(2) Bright spots by the light passing through tears, breaks, etc in color filter.

- Exceed size of a half dot.....High bright spot
- A half dot or lessNot counted

(3) Bright spots by the light passing through tears, breaks, etc in chromium mask.

- Exceed 50μmHigh bright spot
- 50μm or lessNot counted

C
C

12-2-3 Test condition

- Inspector must observe the LCD screen from the normal direction under the illumination by a single 20W fluorescent lamp. The distance between the LCD screen and the inspector should be a height of 50cm above the worktable.
The vertical illuminance is 300 to 600lux (reference value).
- Bright spot should be counted under entire black screen.
- Dark spot should be counted under entire white screen.
- Input signal timing should be typical value.

D
D

(Note1) Please do not mistake a single bright spot for a bright spot connection due to Cs(supplemental capacitance) line at the center of each dot.

(Note2) If a pixel is dark partially, it connects into the number of dark spots in accordance with following rule.

(a) $A < 1/3$: Not count. Only one of 4 dark connection is allowed.
(b) $1/3 \leq A < 2/3$: Considered as 0.5 dot.
(c) $2/3 \leq A$: Considered as 1 dot.

(A=Dark spot size/dot size)

13. ENVIRONMENTAL SPECIFICATIONS

Table 13-1 show the environmental specifications.

Table 13-1 Environmental specifications

Item	Condition		Remark
Temperature	Operation	0 ~ 55	Temperature on surface of LCD panel (display area.)
	Storage	-20~60°C	
Humidity	Operation	20~85 %RH	Maximum wet-bulb temperature should not exceed 29°C. No condensation.
	Storage	5~85%RH	
Vibration	Non-operation	10~500Hz, 1octave/ 20minute, 19.6m/s ² (2G), 1.5mm max, 1hour each X, Yand Z directions.	For single module without package.
Shock *1	Non-operation	294m/s ² (30G), 6ms, 1time each ±X, ±Y and ±Z directions.	

NOTE: Table 13-2 and Figure 13-1 show the shock resistance standard when module is packaged.

Table 13-2 Shock resistance standard when module is packaged

Dropping location	Dropping height	Count
A~J	60cm	1 time

14. INDICATIONS

This module has the following indications.

- (1) Product name : LCD unit
- (2) Model Number : FLC48SXC8V-11AA
- (3) Product Drawing Number : NA19026-C281
- (4) Manufacturing Number : 4 7 0 0 0 1

Serial number
(To be reset every month on 1st.)

Manufacturing month
(Oct. = X, Nov. =Y, Dec. =Z)

Last digit of manufacturing year.

- (5) Version number : 01A (Example)
-1st 2 digits "01" means operational version.
-3rd alphabet means functional version.
- (6) Manufacturer Country Name :
- (7) Company Name : FUJITSU DISPLAY TECHNOLOGIES CORP.
- (8) Disposal method of cold-cathode tubes.
- (9) Caution when changing cold-cathode tubes.

Figure 14-1 Product Label (Example)

15. PACKAGING

15-1 Packing specifications

- (1) 5 LCD modules/1package.
- (2) Weight : approximately 14kg /1package.
- (3) Outline dimensions: 499mm (W)x 250mm (D)x 464mm (H)

15-2 Packing method

Figure 15-2 show the packing method.

16.WARRANTY

The warranty period is one year after shipping. Products which fail during this period are repaired or replaced without charge, unless the failure is caused by user.

17.PRECAUTIONS

Adhere to the following precautions to use this LCD module properly.

(1) Fail safe design

LCD module has an inherent chance of failure. Customers must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

(2) Handling of LCD panel

Do not apply any strong mechanical shock to the LCD panel.

Since the LCD panel is made of glass, excessive shock may damage the panel or cause a malfunction.

Do not press hard on the LCD panel surface.

In the LCD panel, the gap between two glass plates is kept perfectly even to maintain display properties and reliability. The hard pressure on the LCD panel may cause the following problems. If the pressure is over 2kg/cm², the problem don't return to normal condition.

Ununiformity of color

Disorder of orientation of liquid crystal

Problem returns to normal condition after a while. Problem returns to normal condition by turning the power off and turning on again.

However these operations should be avoided to insure reliability.

Do not scratch the polarizer film on the LCD panel surface.

- Do not press or rub the display surface with a hard tool, tweezers, etc.
- For handling, use cotton or conductive gloves so that the display surface is not soiled.
- If dust or dirt soils the display surface, clean it as follows with a soft cloth (deerskin, etc.)

[Dust] Wipe off with a soft cloth. (do not rub.)

[Dirt] Apply clear water to a soft cloth and squeeze hard out of water drops, then lightly wipe off the specified parts. Only if the dirt is hardly wiped off, use isopropyl alcohol or ethanol.

Be careful not to splash the water or the solvents on the edge of polarizer and in the LCD unit.

The polarizer possibly exfoliates due to the solvent and water penetrated between the polarizer and the LCD panel.

Do not use unspecified solvent such as ketone (acetone, etc.) and aromatics (xylene, toluene, etc.)

A

- B

If control signals (DCLK, ENAB) are not input, or if the timing is out of the specified timing, DC voltage may be applied to the liquid crystal and, as a result, cause image sticking or deterioration of contrast.

C

Brightness uniformity and the reliability of CCFL may decrease if the pressure is applied to the backlight module.

Excessive twist and bend may damage display quality and reliability.

This may cause the backlight to flicker or not to light.

When frequency current for backlight driving leak to the metal enclosure, the desired brightness may not be assured.

D

DOCUMENT CONTROL SECTION

In a corrosive gas environment, various parts of the module may corrode or deteriorate.

F

F

The LCD module is recommended to be stored in humidity controlled, cool and dark locations.

Recommended storage environment

- Place : Dark (avoid direct sunlight)
- Temperature : 10 ~ 35
- Humidity : 50 ~ 60%RH

Note) If the module is left in an environment of 60 and above for a long period of time, optical characteristics may deteriorate.

(7) Disposal Method

LCD module

The components of this LCD module can be grouped into metal, resin, glass and so on. As the backlight contains CCFL which includes mercury, it must be disposed according to the local ordinance or regulations.

Package

All the packages are made of recyclable papers except the anti-ESD bag.

(8) CAUTION IN DESIGNING INVERTER

Fluorescent lamps driven by high voltage are included in this LCD module. Please stand to the instructions below when designing inverter that lights the fluorescent lamps. Otherwise it may lead to FATAL FAILURE, such as SMOKING or FIRING.

APPLY PROTECTIVE CIRCUIT in preparation for lamp breaking, wire breaking and short circuit. The protective circuit should also detect half open circuit and wire breaking in narrow gap etc.. Otherwise it may lead to fatal failure.

KEEP ENOUGH CURRENT CAPACITY of inverter output for leakage current, which leaks from lamps and wire to surrounding metal material. Usually output current of about 1.5 times as same as the lamp current is necessary. But it sometimes varies due to characteristics of the inverter itself. So before determining design, please check characteristics of the inverter by connecting it to the LCD module.

KEEP ENOUGH TEMPERATURE MARGIN for each parts mounted on inverter. Temperature of the parts becomes higher when they are mounted in the final products due to heating inside. The temperature of each parts MUST NOT increase over the guaranteed temperature.

(8) Return method of the LCD module requested for repair or analysis of the problem

- When returning the LCD modules, adhere to the following procedures not to damage the LCD panel or the backlight cables. (Fig. 17-1(a)~(b))
When the LCD module is returned without following the specified packaging procedures, FDTG will not take responsibility for the damages caused by the failure of the packaging method.
- Please be cautious not to put fingerprints or other stains on the display by wearing a glove or fingerstall when managing LCD module modules, including faulty modules that require to be returned .

(1) Attach protective sheet.

(2) Put the backlight cables in slots.

(3) Put the LCD module into the anti-electrostatic bag
(Please do not use torn anti-electrostatic bags)
