## 1. General Description

The LP133X8-A2M1 is a Color Active Matrix Liquid Crystal Display with an integral Cold Cathode Fluorescent Lamp(CCFL) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. This TFT-LCD has a 13.3 inches diagonally measured active display area with XGA resolution(768 vertical by 1024 horizontal pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 6-bit gray scale signal for each dot, thus, presenting a palette of more than 262,144 colors.

The LP133X8-A2M1 has been designed to apply the interface method that enables low power, high speed, low EMI. Flat Link must be used as a LVDS(Low Voltage Differential Signaling) chip.

The LP133X8-A2M1 is intended to support applications where thin thickness, low power are critical factors and graphic displays are important. In combination with the vertical arrangement of the sub-pixels, the LP133X8-A2M1 characteristics provide an excellent flat panel display for office automation products such as Notebook PC.

## General Features

Active screen size	13.3 inches(33.78cm) diagonal
Outline dimensions	284(H) X 214.5(V) X 5.2(D) mm (Typ.)
Pixel pitch	0.264 mm X 0.264 mm
Pixel format	1024 horiz. by 768 vert. pixels
	RGB stripe arrangement
Color depth	6-bit, 262,144 colors
Luminance,White	150 cd/m <sup>2</sup> (Typ.)
Power Consumption	Total 4.7 Watt(Typ.)
Weight	390g (Typ.)
Display operating mode	Transmissive mode, normally white
Surface treatments	Hard coating (3H), Anti-glare treatment of the front polarizer

Product Specification

## 2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

**Table 1 ABSOLUTE MAXIMUM RATINGS**

Parameter	symbol	Values		Units	Notes
		Min.	Max.		
Power Input Voltage	V <sub>CC</sub>	-0.3	4.0	Vdc	at 25 ± 5°C
Operating Temperature	T <sub>OP</sub>	0	50	°C	1
Operating Tempe. for Panel	-	0	60	°C	2
Storage Temperature	T <sub>ST</sub>	-20	60	°C	1
Operating Ambient Humidity	H <sub>OP</sub>	10	90	%RH	1
Storage Humidity	H <sub>ST</sub>	10	90	%RH	1

Note: 1. Temperature and relative humidity range are shown in the figure below.

Wet bulb temperature should be 39°C Max, and no condensation of water.

2. The surface temperature caused by self heat radiation of cell itself is specified on this item.

**Product Specification**

### 3. Electrical Specifications

#### 3-1. Electrical Characteristics

The LP133X8-A2M1 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input which powers the CCFL, is typically generated by an inverter. The inverter is an external unit to the LCD.

**Table 2 ELECTRICAL CHARACTERISTICS:**

Parameter	Symbol	Values			Units	Notes
		Min.	Typ.	Max.		
<b>Module</b>						
Power Supply Input Voltage	V <sub>CC</sub>	3.0	3.3	3.6	Vdc	
Power Supply Input Current	I <sub>CC</sub>	-	270	390	mA	1
Differential Impedance	Z <sub>m</sub>	90	100	110	Ohm	2
Power Consumption	P <sub>c</sub>	-	0.9	1.2	W	1
Rush Current	I <sub>RUSH</sub>	-	1.5	1.8	A	3
<b>Lamp</b>						
Operating Voltage	V <sub>BL</sub>	-	620	682	V <sub>RMS</sub>	4
Operating Current	I <sub>BL</sub>	3.0	6.0	6.5	mA	
Established Starting Voltage at	25°C	-	-	1050	V <sub>RMS</sub>	5
		0°C	-	-	1260	V <sub>RMS</sub>
Discharge Stabilization Time	T <sub>s</sub>			3	min	7
Operating Frequency	f <sub>BL</sub>	40	60	80	kHz	6
Power Consumption	P <sub>BL</sub>	-	3.8	4.2	Watts	8
Life Time		10,000		-	Hours	9

Notes: **The design of the inverter must have specifications for the lamp in LCD Assembly.**

The performance of the Lamp in LCM, for example life time or brightness, is extremely influenced by the characteristics of the DC-AC Inverter. So all the parameters of an inverter should be carefully designed so as not to produce too much leakage current from high-voltage output of the inverter.

When you design or order the inverter, please make sure unwanted lighting caused by the mismatch of the lamp and the inverter (no lighting, flicker, etc) never occurs. When you confirm it, the LCD Assembly should be operated in the same condition as installed in your instrument.

- The specified current and power consumption are under the  $V_{CC} = 3.3V$ ,  $25^\circ C$ ,  $f_v = 60Hz$  condition whereas 64 gray pattern is displayed.
- This impedance value is needed to proper display and measured from LVDS Tx to the mating connector.
- The duration of rush current is about 20ms.
- The variance of the voltage is  $\pm 10\%$ . (At typical current)
- The voltage above  $V_s$  should be applied to the lamps for more than 1 second for start-up. Otherwise, the lamps may not be turned on.
- The output of the inverter must have symmetrical (negative and positive) voltage waveform and symmetrical current waveform. (Unsymmetrical ratio is less than 10%)  
Please do not use the inverter which has unsymmetrical voltage and unsymmetrical current and spike wave. Lamp frequency may produce interference with horizontal synchronous frequency and as a result this may cause beat on the display.  
Therefore lamp frequency shall be as away as possible from the horizontal synchronous frequency and from its harmonics in order to prevent interference.
- Let's define the brightness of the lamp after being lighted for 5 minutes as 100%.  
 $T_s$  is the time required for the brightness of the center of the lamp to be not less than 95%.
- The lamp power consumption shown above does not include loss of external inverter. (At typical current)

**Product Specification**

9. The life time is determined as the time at which brightness of lamp is 50% compared to that of initial value at the typical lamp current on condition of continuous operating at  $25 \pm 2^\circ\text{C}$ .

Notes: Do not attach a conduction tape to lamp connection wire

If the lamp wire attach to a conducting tape, TFT-LCD Module has a low luminance

And the inverter has abnormal action. Because leakage current is occurred

Between lamp wire and conducting tape.

### 3-2. Interface Connections

Interface chip must be used FlatLink, part No. SN75LVDS84(Transmitter) made by Texas Instrument Inc. or equivalent..

This LCD employs two interface connections, a 20 pin connector is used for the module electronics and the other connector is used for the integral backlight system.

The electronics interface connector is a model DF19KR-20P-1H manufactured by HIROSE or equivalent. The pin configuration for the connector is shown in the table below.

**Table 3 MODULE CONNECTOR PIN CONFIGURATION (LVDS)**

Pin	Symbol	Description	Notes
1	Vcc	Power (3.3V)	1. Interface chips 1.1 LCD : SN75LVDS88B(LCD Controller) including LVDS Receiver 1.2 System : SN75LVDS84 or equivalent * Pin to Pin compatible with THINE LVDS  2. Product Specification

### 3-3. Signal Timing Specifications

This is the signal timing required at the input of the LVDS Transmitter. All of the interface signal timing should be satisfied with the following specifications for it's proper operation.

**Table 6 Timing Table**

ITEM		SYMBOL	MIN.	TYP.	MAX.	UNIT	NOTE
Dclk	Period	$t_{CLK}$	15.32	15.4	15.48	ns	TYP. 65MHz
Hsync	Period	$t_{HP}$	1206	1344	1364	$t_{CLK}$	
	Width-Active	$t_{WH}$	8	136	240		
Vsync	Period	$t_{VP}$	780	806	830	$t_{HP}$	
	Frequency	$f_V$	-	60	-	Hz

	H-Front Porch	$t_{HFP}$	10	-	-		
	V-Back Porch	$t_{VBP}$	2	-	-	$t_{HP}$	
	V-Front Porch	$t_{VFP}$	1	-	-		

### 3-4. Signal Timing Waveforms

Product Specification

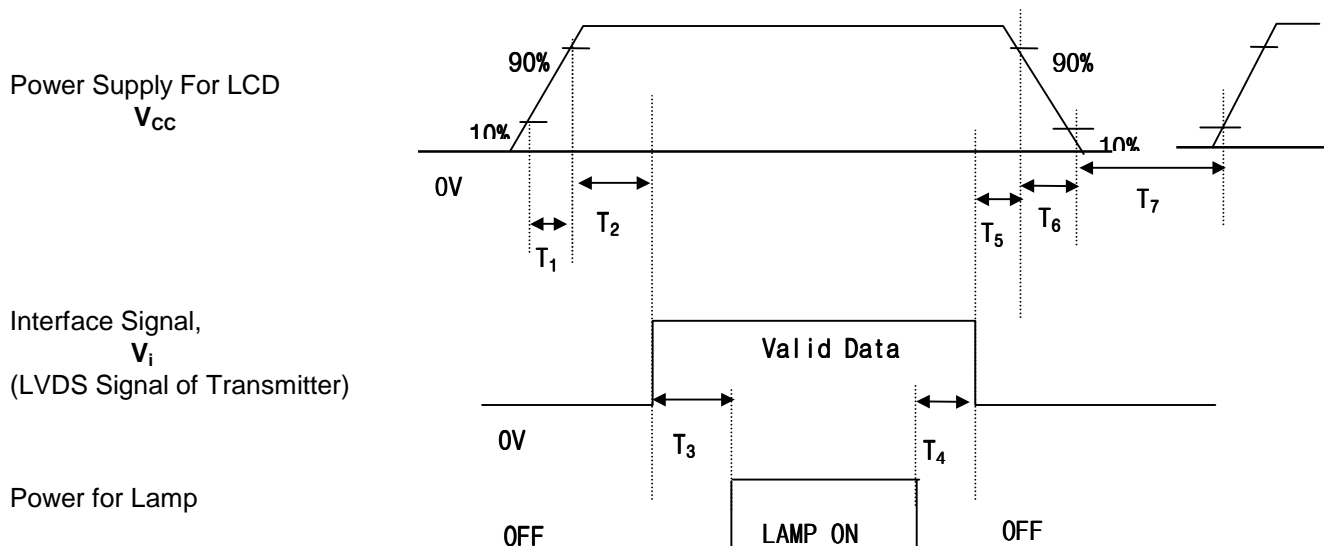

### 3-5. Color Input Data Reference

The brightness of each primary color(red, green and blue) is based on the 6-bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

**Table 7 COLOR DATA REFERENCE**

Color		Input Color Data																	
		Red						Green						Blue					
		MSB			LSB			MSB			LSB			MSB			LSB		
		R5	R4	R3	R2	R1	R0	G5	G4	G3	G2	G1	G0	B5	B4	B3	B2	B1	B0

### 3-6. Power Sequence

Parameter	Values			Units
	Min.	Typ.	Max.	
T <sub>1</sub>	-	-	10	ms
T <sub>2</sub>	0	-	50	
T <sub>3</sub>	200	-	-	
T <sub>4</sub>	200	-	-	
T <sub>5</sub>	0	-	50	
T <sub>6</sub>	-	-	10	
T <sub>7</sub>	400	-	-	

- Notes:
1. Please avoid floating state of interface signal at invalid period.
  2. When the interface signal is invalid, be sure to pull down the power supply for LCD  $V_{CC}$  to 0V.
  3. Lamp power must be turn on after power supply for LCD and interface signal are valid.

Product Specification

## 4. Optical Specifications

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 30 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\theta$  equal to 0°C.

FIG 1. presents additional information concerning the measurement equipment and method.

**FIG. 1 Optical Characteristic Measurement Equipment and Method**

**Table 8 OPTICAL CHARACTERISTICS** (Ta=25°C, Vcc=3.3V, f<sub>V</sub>=60Hz, Dclk=65MHz, I<sub>BL</sub>= 6 mA)

Parameter		Symbol	Values			Units	Notes
			Min.	Typ.	Max.

	x axis, right (Φ=0°)	θ <sub>r</sub>	40	-	-	degree	5
	x axis, left(Φ=180°)	θ <sub>l</sub>	40	-	-		
	y axis, up(Φ=90°)	θ <sub>u</sub>	10	-	-		
	y axis, down (Φ=270°)	θ <sub>d</sub>	30	-	-		
Gray Scale			-	-	-		6

Notes:

- Contrast Ratio (CR) is defined mathematically as :  

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$
- Surface luminance is the center point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 2.

**Product Specification**

3. The variation in surface luminance,  $\delta$  WHITE is determined by measuring  $L_{ON}$  at each test position 1 through 5, and then dividing the maximum  $L_{ON}$  of 5 points luminance by minimum  $L_{ON}$  of 5 points luminance. For more information see FIG 2.

$$\delta \text{ WHITE} = \text{Maximum } (L_{ON1}, L_{ON2}, \dots, L_{ON5}) \div \text{Minimum } (L_{ON1}, L_{ON2}, \dots, L_{ON5})$$

4. Response time is the time required for the display to transition from white to black (Rise Time,  $Tr_R$ ) and from black to white (Decay Time,  $Tr_D$ ). For additional information see FIG 3.
5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.
6. Gray scale specification.

\* Gamma Value = 2.2

Gray Level	Luminance(%) (Typ.)
L0	0.35
L7	0.90

Mark	7	8	9	0	1	2	3	4	5	6	7

2. MONTH

MONTH	Jan.	Feb.	Mar.	Apr.	May.	Jun.	Jul.	Aug.	Sep.	Oct.	Nov.	Dec.
Mark	1	2	3	4	5	6	7	8	9	A	B	C

3. Serial No.

Serial No.	1 ~ 99999	100000 ~
Mark	00001 ~ 99999	A0001 ~ A9999, ..... , Z9999

b) Location of Lot Mark

Serial NO. Is printed on the label. The label is attached to the backside of the LCD module.  
This is subject to change without prior notice.

### **8-2. Packing Form**

a) Package quantity in one box : 10 pcs

b) Box Size : 371mm X 239mm X 300mm

## **9. PRECAUTIONS**

Please pay attention to the followings when you use this TFT LCD module.

### **9.1 MOUNTING PRECAUTIONS**

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. twisted stress) is not applied to the module.  
And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach a transparent protective plate to the surface in order to protect the polarizer.  
Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.  
Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaked with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

### **9.2 OPERATING PRECAUTIONS**

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :  
 $V = \pm 200\text{mV}$  (Over and under shoot voltage).
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)  
And in lower temperature, response time (required time that brightness is stable after turned on ) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.

### **9.3 ELECTROSTATIC DISCHARGE CONTROL**

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc . And don't touch interface pin directly.

### **9.4 PRECAUTIONS FOR STRONG LIGHT EXPOSURE**

Strong light exposure causes degradation of polarizer and color filter.

### **9.5 STORAGE**

When storing modules as spares for a long time, the following precautions are necessary.

(1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.

(2) The polarizer surface should not come in contact with any other object.

It is recommended that they be stored in the container in which they were shipped.

### **9.6 HANDLING PRECAUTIONS FOR PROTECTION FILM**

(1) When the protection film is peeled off, static electricity is generated between the film and polarizer.

This should be peeled off slowly and carefully by people who are electrically grounded and with well ion- blown equipment or in such a condition, etc.

(2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.

Please carefully peel off the protection film without rubbing it against the polarizer.

(3) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.

(4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
