### 1. General Description

LM238WR2 is a Color Active Matrix Liquid Crystal Display with a Light Emitting Diode (LED) backlight Assembly without LED driver. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally black mode. It has a 23.8 inch diagonally measured active display area with UHD resolution (3840 horizontal by 2160 vertical pixel array) Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 10-bit gray scale signal for each dot, thus, presenting a palette of more than 1.07Billion colors with A-FRC (Advanced Frame Rate Control).

It has been designed to apply eDP interface.

It is intended to support displays where high brightness, super wide viewing angle, high color saturation, and high color are important.

### General Features

**[ FIG.1 ] Block diagram**

Active Screen Size	23.8 inches(60.47cm) (Aspect ratio 16:9)
Outline Dimension	545.0(H) x 323.4(V) x 12.5(D) mm (Typ.)
Pixel Pitch	0.13725 mm x 0.13725 mm
Pixel Format	3840 horiz. By 2160 vert. Pixels RGB stripes arrangement
Color Depth	1.07 Billion colors, 10Bit (8Bit + A-FRC)
Luminance, White	300 cd/m <sup>2</sup> ( Center 1 Point, Typ.)
Viewing Angle(CR>10)	View Angle Free (R/L 178(Typ.), U/D 178(Typ.))
Power Consumption	Total 31.1 Watt (6.7 Watt @VLCD 23.4 Watt @Is=120mA)
Weight	Typ : 1850 g
Display Operating Mode	Transmissive mode, normally black
Panel type	Reverse type
Surface Treatment	Advanced Anti-glare treatment of the front polarizer (3H)

### 2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

**Table 1. ABSOLUTE MAXIMUM RATINGS**

Parameter	Symbol	Values		Units	Notes
		Min	Max		
Power Input Voltage	V <sub>LCD</sub>	-0.3	12	V <sub>dc</sub>	at 25 ± 2°C
Operating Temperature	T <sub>OP</sub>	0	50	°C	1, 2, 3
Storage Temperature	T <sub>ST</sub>	-20	60	°C	
Operating Ambient Humidity	H <sub>OP</sub>	10	90	%RH	
Storage Humidity	H <sub>ST</sub>	10	90	%RH	

Note : 1. Temperature and relative humidity range are shown in the figure below.

Wet bulb temperature should be 39 °C Max, and no condensation of water.

2. Maximum Storage Humidity is up to 40°C, 70% RH only for 4 corner light leakage Mura.

3. Storage condition is guaranteed under packing condition

4. LCM Surface Temperature should be Min. 0°C and Max. 65°C under the V<sub>LCD</sub>=10V, f<sub>V</sub>=60Hz, 25°C ambient Temp. no humidity control and LED string current is typical value.

### 3. Electrical Specifications

#### 3-1. Electrical Characteristics

It requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input power for the LED/Backlight, is typically generated by a LED Driver. The LED Driver is an external unit to the LCDs.

**Table 2-1. ELECTRICAL CHARACTERISTICS**

Parameter	Symbol	Values			Unit	Notes
		Min	Typ	Max		
MODULE :						
Power Supply Input Voltage	V <sub>LCD</sub>	9.5	10.0	10.5	V <sub>dc</sub>	5
Permissive Power Input Ripple	V <sub>ripple</sub>			200	mV <sub>p-p</sub>	1
Power Supply Input Current	I <sub>LCD</sub>	-	670	840	mA	2
		-	880	1100	mA	3
Power Consumption	P <sub>c</sub> TYP	-	6.7	8.4	Watt	2
	P <sub>c</sub> MAX	-	8.8	11	Watt	3
Rush current	I <sub>RUSH</sub>	-		3	A	4

Note :

1. Permissive power ripple should be measured under V<sub>LCD</sub>=10.0V, 25°C, f<sub>V</sub>=60Hz condition and at that time, we recommend the bandwidth configuration of oscilloscope is to be under 20Mhz.
2. The specified current and power consumption are under the V<sub>LCD</sub>=10.0V, 25°C, f<sub>V</sub>=60Hz condition whereas mosaic pattern(8 x 6) is displayed and f<sub>V</sub> is the frame frequency.
3. The current is specified at the maximum current pattern.
4. Maximum Condition of Inrush current :  
The duration of rush current is about 2ms and rising time of power Input is 1ms(min.).
5. V<sub>LCD</sub> level must be measured at two points on LCM PCB - between V<sub>LCD</sub> (test point) and LCM Ground.  
The measured results need to meet the Power supply input voltage specification.  
(Test condition : maximum power pattern , 25°C, fV=60Hz)

Power Consumption	PBar	-	23.4	25.0	Watt	1, 2, 4
LED Life Time	LED_LT	30,000	-	-	Hrs	3

Notes) The LED Bar consists of 64 LED packages, 4 strings (parallel) x 16packages (serial) x 1 bar

### LED driver design guide

: The design of the LED driver must have specifications for the LED in LCD Assembly.

The performance of the LED in LCM, for example life time or brightness, is extremely influenced by the characteristics of the LED driver.

So all the parameters of an LED driver should be carefully designed and output current should be Constant current control.

Please control feedback current of each string individually to compensate the current variation among the strings of LEDs.

When you design or order the LED driver, please make sure unwanted lighting caused by the mismatch of the LED and the LED driver (no lighting, flicker, etc) never occurs.

When you confirm it, the LCD module should be operated in the same condition as installed in your instrument.

1. The specified values are for a single LED bar.
2. The specified current is defined as the input current for a single LED string with 100% duty cycle.
3. The LED life time is defined as the time when brightness of LED packages become 50% or less than the initial value under the conditions at  $T_a = 25 \pm 2^\circ\text{C}$  and LED string current is typical value.
4. The power consumption shown above does not include loss of external driver.  
 The typical power consumption is calculated as  $P_{\text{Bar}} = V_s(\text{Typ.}) \times I_s(\text{Typ.}) \times \text{No. of strings}$ .  
 The maximum power consumption is calculated as  $P_{\text{Bar}} = V_s(\text{Max.}) \times I_s(\text{Typ.}) \times \text{No. of strings}$ .
5. LED operating conditions are must not exceed Max. ratings.

14	AUX_CHP	True Signal for Auxiliary Channel	29	NC	No Connection
15	GND	Ground	30	GND	Ground

- Note: 1. All GND(ground) pins should be connected together and to Vss which should also be connected to the LCD's metal frame.  
2. All VLCD (power input) pins should be connected together.  
3. BIST (Build In Self Test) : If Pin 28 is "High(3.3V)", T-Con generates Rotational Pattern.  
Time to stay at every pattern is about 2sec.

### 3-3. eDP Signal Specifications

#### 3-3-1. eDP Main Link Signal

Parameter	Symbol	Min	Typ	Max	Unit	Notes
Unit Interval for high bit rate (5.4Gbps / lane)	UI_HBR2	-	185	-	ps	
Link Clock Down Spreading	Amplitude	0	-	0.5	%	
	Frequency	30		33	kHz	
Differential peak-to-peak voltage at Sink side connector	$V_{RX-DIFFp-p}$	150	-	1320	mV	Note 7,8)
EYE width at Sink side connector	$T_{RX-EYE-CONN}$	0.51	-	-	UI	Note 7,8)
Rx DC common mode voltage	$V_{RX CM}$	-	0	2.0	V	
Lane-to-Lane skew	$L_{RX-SKEW-INTER\_PAIR}$	-	-	5200	ps	
Lane intra-pair skew	$L_{RX-SKEW-INTRA\_PAIR}$	-	-	50	ps	
AC Coupling Capacitor	$C_{SOURCE-ML}$	75		200	nF	Source side

Note)

1. Termination resistor is typically integrated into the transmitter and receiver implementations.
2. In cabled embedded system, it is recommended the system designer ensure that EYE width and voltage are met at the sink side connector pins.
3. Mismatched common mode voltage will occur abnormal display.
4. All eDP electrical spec is measured at sink connector side.
5. eDP cable Impedance recommend 100ohm  $\pm$  5%.
6. At sink side main link cap. are for protection ESD/EOS damage.

Note)

1. Termination resistor is typically integrated into the transmitter and receiver implementations.
2.  $V_{AUX-DIFFp-p} = 2 * |V_{AUXP} - V_{AUXN}|$
3. Termination resistor should be  $\pm 50\Omega$  at source side to AUX level.
4. At sink side AUX cap. are for protection ESD/EOS damage.
5. Mismatched common mode voltage will occur abnormal display.

### 3-3-3. eDP HPD Signal

Parameter	Symbol	Min	Typ	Max	Unit	Notes
HPD Voltage	HPD	2.25	-	3.6	V	Sink side Driving
Hot Plug Detection Threshold		2.0	-	-	V	Source side Detecting
Hot Unplug Detection Threshold		-	-	0.8	V	
HPD_IRQ Pulse Width	HPD_IRQ	0.5	-	1.0	ms	
HPD_TimeOut		2.0	-	-	ms	HPD Unplug Event

Note)

1. HPD IRQ : Sink device wants to notify the Source device that Sink's status has changed so it toggles HPD line, forcing the Source device to read its Link / Sink Receiver DPCD field via the AUX-CH
2. HPD Unplug : The Sink device is no longer attached to the Source device and the Source device may then disable its Main Link as a power saving mode
3. Plug / Re-plug : The Sink device is now attached to the Source device, forcing the Source device to read its Receiver capabilities and Link / Sink status Receiver DPCD fields via the AUX-CH

	Vertical Blank	-	62	62	62		tWV+ tVBP+ tVFP

Note:

1. DE Only mode operation. The input of Hsync & Vsync signal does not have an effect on LCD normal operation.
2. The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rates.
3. Horizontal period should be even.

1. Do not insert the mating cable when system turn on.
  2. Valid Data have to meet "3-4. Signal Timing Specifications"
  3. When the Video signal is invalid, be sure to pull down the power supply for LCD VLCD to 0V.
  4. The above power sequence should be satisfied the basic power on/off and resolution, timing transition.
  5. LED power must be turn on after power supply for LCD and valid status of Video Signal.
  6. Link Training duration is dependant on the customer's system.

### 4. Optical Specifications

Optical characteristics are determined after the unit has been 'ON' for approximately 30 minutes in a dark environment at  $25 \pm 2^\circ\text{C}$ . The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\theta$  equal to  $0^\circ$  and aperture 1 degree.

FIG. 6 presents additional information concerning the measurement equipment and method.

### Notes

1. Contrast Ratio(CR) is defined mathematically as : **(By PR880)**

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

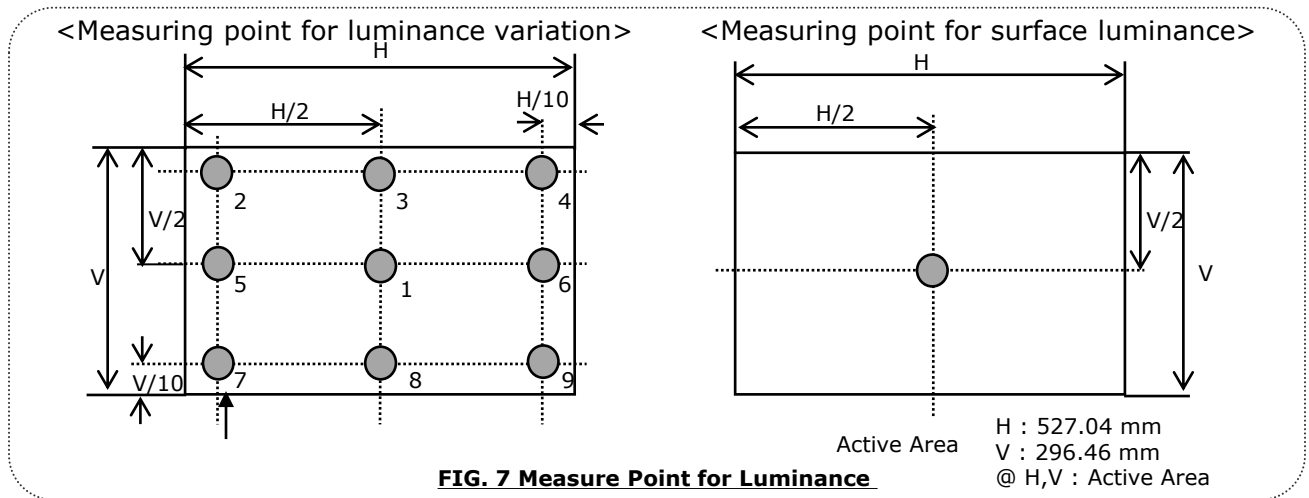

It is measured at center point(Location P1)

2. Surface luminance( $L_{WH}$ ) is luminance value at Center 1 point(P1) across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG.7 (By PR880)

3. The variation in surface luminance ,  $\delta$  WHITE is defined as : **(By PR880)**

$$\delta_{WHITE} = \frac{\text{Minimum}(L_{P1}, L_{P2}, \dots, L_{P9})}{\text{Maximum}(L_{P1}, L_{P2}, \dots, L_{P9})} \times 100$$

Where L1 to L9 are the luminance with all pixels displaying white at 9 locations.  
 For more information see FIG.7

## Product Specification

4. Gray to gray response time is the time required for the display to transition from gray to gray. For additional information see Table 9. ( **By PR880** )

**Table 9. Gray to gray response time table**

Gray to Gray		Rising Time				
		G1023	G767	G511	G255	G0
Falling Time	G1023					
	G767					
	G511					
	G255					
	G0					

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

**FIG.8 Response time**

## Product Specification

5. Color shift is the angle at which the average color difference for all Macbeth is lower than 0.02.

For more information see FIG.9 **(By EZ Contrast)**

- Color difference ( $\Delta u'v'$ )

$$u' = \frac{4x}{-2x+12y+3} \quad v' = \frac{9y}{-2x+12y+3} \quad \Delta u'v' = \sqrt{(u'_1 - u'_2)^2 + (v'_1 - v'_2)^2}$$

$$Avg(\Delta u'v') = \frac{\sum_{i=1}^{24} (\Delta u'v')_i}{24}$$

$u'_1, v'_1$  :  $u'v'$  value at viewing angle direction  
 $u'_2, v'_2$  :  $u'v'$  value at front ( $\theta=0$ )  
 $i$  : Macbeth chart number (Define 23 page)

- Pattern size : 25% Box size
- Viewing angle direction of color shift : Horizontal, Vertical

## Product Specification

6. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG.10 **(By PR880)**

Dimension of viewing angle range.

**FIG.10 Viewing angle**

**FIG.11 Sample Luminance vs. gray scale (using a 256 bit gray scale)**

$$L = aV^r + L_b$$

**FIG.12 Sample Log-log plot of luminance vs. gray scale**

$$\log(L - L_b) = r \log(V) + \log(a)$$

Here the Parameter  $a$  and  $\gamma$  relate the signal level  $V$  to the luminance  $L$ .  
The GAMMA we calculate from the log-log representation (FIG.10)

## Product Specification

7. Gamma Value is approximately 2.2. For more information see Table 10.

### 9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

#### 9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.  
Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaked with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.
- (10) As The IPS panel is sensitive & slim, please recommend the metal frame of the system supports the panel by the double side-mount.

#### 9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :  
 $V = \pm 200\text{mV}$  (Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In Higher temperature, it becomes lower.)  
And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.
- (7) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can't be operated its full characteristics perfectly.
- (8) A screw which is fastened up the steels should be a machine screw.  
(if not, it causes metallic foreign material and deal LCM a fatal blow)
- (9) Please do not set LCD on its edge.
- (10) When LCMs are used for public display defects such as Yogore, image sticking can not be guaranteed.
- (11) LCMs cannot support "Interlaced Scan Method"
- (12) When this reverse model is used as a forward-type model (PCB on top side), LGD can not guarantee any defects of LCM.
- (13) Please conduct image sticking test after 2-hour aging with Rolling PTN and normal temperature (25~40°C)

## Product Specification

**9-3. ELECTROSTATIC DISCHARGE CONTROL**

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

**9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE**

Strong light exposure causes degradation of polarizer and color filter.

**9-5. STORAGE**

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.  
It is recommended that they be stored in the container in which they were shipped.

**9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM**

- (1) The protection film is attached to the bezel with a small masking tape.  
When the protection film is peeled off, static electricity is generated between the film and polarizer.  
This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
