Product Specification

1. General Description

The LP133WH1 is a Color Active Matrix Liquid Crystal Display with an integral LED backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. This TFT-LCD has 13.3 inches diagonally measured active display area with WHD resolution(1366 horizontal by 768 vertical pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 6-bit gray scale signal for each dot, thus, presenting a palette of more than 262,144 colors.

The LP133WH1 has been designed to apply the interface method that enables low power, high speed, low EMI.

The LP133WH1 is intended to support applications where thin thickness, low power are critical factors and graphic displays are important. In combination with the vertical arrangement of the sub-pixels, the LP133WH1 characteristics provide an excellent flat display for office automation products such as Notebook PC.

General Features

| | |
|----------------------------|--|
| Active Screen Size | 13.3 inches diagonal |
| Outline Dimension | 308.1 (H) × 183.6 (V) × 5.5(D, max.) mm |
| Pixel Pitch | 0.2148 mm × 0.2148 mm |
| Pixel Format | 1366 horiz. by 768 vert. Pixels RGB strip arrangement |
| Color Depth | 6-bit, 262,144 colors |
| Luminance, White | 200 cd/m ² (Typ., 5 points) |
| Power Consumption | Total 4.5 Watt(Max.) @ LCM circuit 1.2 Watt(Max.), B/L input 3.3Watt(Max. with Driver) |
| Weight | 350g(Max.) |
| Display Operating Mode | Transmissive mode, normally white |
| Surface Treatment | Hard Coating(3H), Glare treatment of the front polarizer |
| RoHS Comply & Halogen Free | Yes |

Product Specification

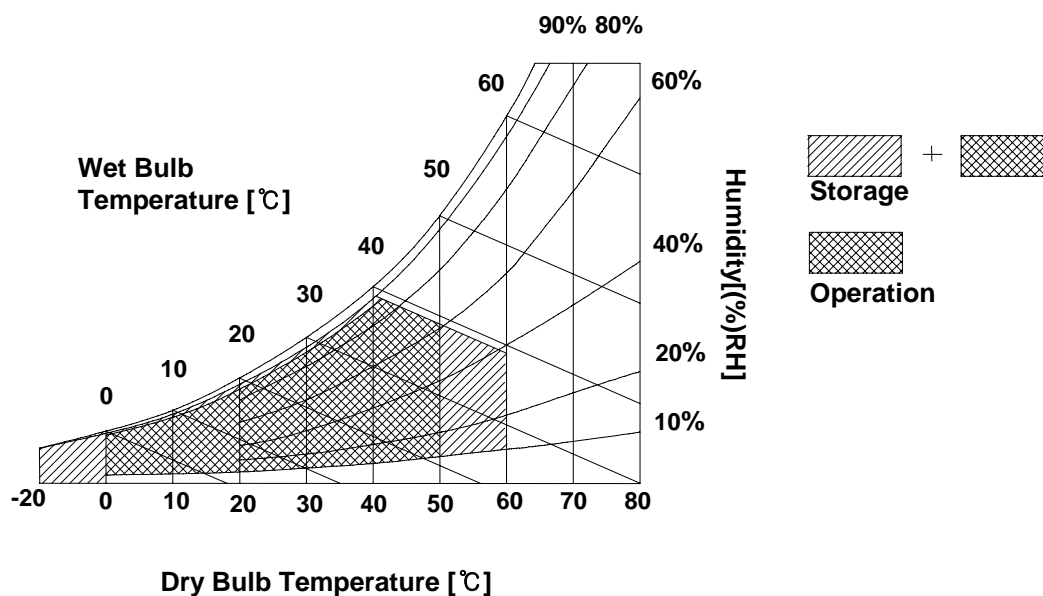

2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Table 1. ABSOLUTE MAXIMUM RATINGS

| Parameter | Symbol | Values | | Units | Notes |
|----------------------------|--------|--------|-----|-------|-------------|
| | | Min | Max | | |
| Power Input Voltage | VCC | -0.3 | 4.0 | Vdc | at 25 ± 5°C |
| Operating Temperature | TOP | 0 | 50 | °C | 1 |
| Storage Temperature | HST | -20 | 60 | °C | 1 |
| Operating Ambient Humidity | HOP | 10 | 90 | %RH | 1 |
| Storage Humidity | HST | 10 | 90 | %RH | 1 |

Note : 1. Temperature and relative humidity range are shown in the figure below.
Wet bulb temperature should be 39°C Max, and no condensation of water.

Product Specification

3. Electrical Specifications

3-1. Electrical Characteristics

The LP133WH1 requires two power inputs. The first logic is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second backlight is the input about LED B/L.with LED Driver.

Table 2. ELECTRICAL CHARACTERISTICS

| Parameter | Symbol | Values | | | Unit | Notes |
|--------------------------------|------------------------------|--------|------|------|------|-------|
| | | Min | Typ | Max | | |
| LOGIC : | | | | | | |
| Power Supply Input Voltage | V _{CC} | 3.0 | 3.3 | 3.6 | V | 1 |
| Power Supply Input Current | Mosaic I _{CC} | - | 315 | 365 | mA | 2 |
| | Black I _{CC_max} | | 360 | 410 | mA | 3 |
| Power Consumption | P _{CC} | - | 1.0 | 1.2 | W | 2 |
| Power Supply Inrush Current | I _{CC_P} | - | - | 1500 | mA | 4 |

| Life Time | | 12,000 | - | - | Hrs | 12 |

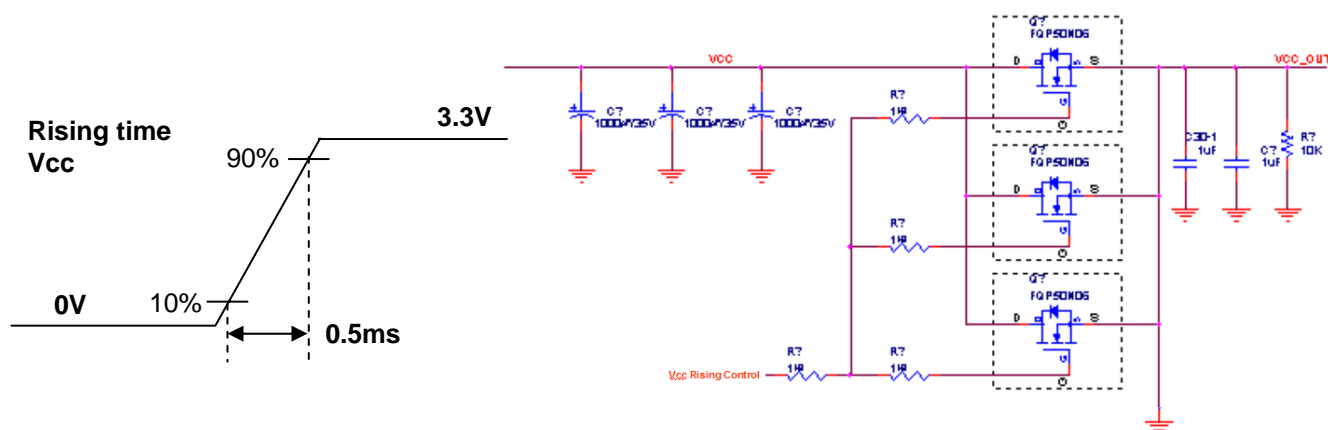

Product Specification

Note)

1. The measuring position is the connector of LCM and the test conditions are under 25 °C , $f_v = 60\text{Hz}$, Black pattern.
2. The specified I_{cc} current and power consumption are under the $V_{cc} = 3.3\text{V}$, 25 °C , $f_v = 60\text{Hz}$ condition whereas Mosaic pattern is displayed and f_v is the frame frequency.

3. This Spec. is the max load condition for the cable impedance designing.
4. The below figures are the measuring V_{cc} condition and the V_{cc} control block LGD used.
The V_{cc} condition is same the minimum of T1 at Power on sequence.

5. This impedance value is needed to proper display and measured form eDP Tx to the mating connector.
6. The measuring position is the connector of LCM and the test conditions are under 25 °C .
7. The current and power consumption with LED Driver are under the $V_{led} = 12.0\text{V}$, 25 °C , Dimming of Max luminance whereas White pattern is displayed and f_v is the frame frequency.
8. The below figures are the measuring V_{led} condition and the V_{led} control block LGD used.
 V_{LED} control block is same with V_{cc} control block.

9. The operation of LED Driver below minimum dimming ratio may cause flickering or reliability issue.
10. If Jitter of PWM is bigger than maximum. It may cause flickering.
11. This Spec. is not effective at 100% dimming ratio as an exception because it has DC level equivalent to 0Hz. In spite of acceptable range as defined, the PWM Frequency should be fixed and stable for more consistent brightness control at any specific level desired.
- 12 The life time is determined as the time at which the typical brightness of LCD is 50% compare to that of initial value at the typical LED current. These LED backlight has 6 strings on it and the typical current of LED's string is base on 20mA.

Product Specification

3-2. Interface Connections

This LCD employs one interface connections, a 40 pin connector is used for the module electronics interface and LED Driver.

The electronics interface connector is a model 20455-040E-0x manufactured by I-PEX.

| | Vertical front porch | t_{VFP} | 1 | 3 | 5 | |

Note)

- In this documentation, all reliabilities are specified for timing specification based on refresh rate of 60Hz. However, LP133WH1 has a good actual performance even at lower refresh rate(eg. 40Hz or 50Hz) for power saving mode, whereas LP133WH1 is secured only for function under lower refresh rate. 60Hz at Normal mode, 50Hz ,40 Hz at Power save mode. Don't care Flicker level (power save mode).

3-5. Signal Timing Waveforms

Product Specification

3-6. Color Input Data Reference

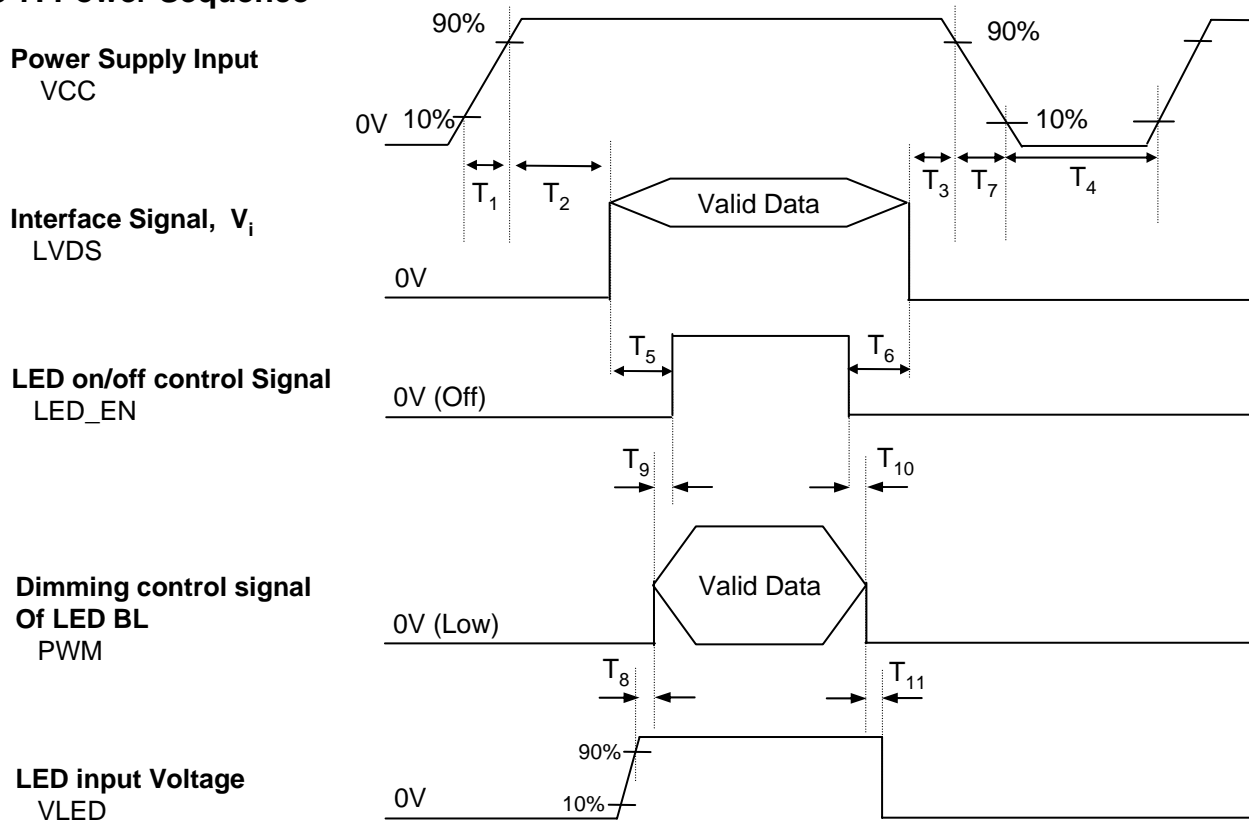

The brightness of each primary color (red, green and blue) is based on the 6-bit gray scale data input for the color ; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

Table 6. COLOR DATA REFERENCE

| Color | | Input Color Data | | | | | | | | | | | | | | | | | |
|-------------|------------|------------------|-----|-----|-----|-----|-----|-------|-----|-----|-----|-----|-----|------|-----|-----|-----|-----|-----|

Note)

1. Valid Data is Data to meet "3-3. LVDS Signal Timing Specifications"
2. Please avoid floating state of interface signal at invalid period.
3. When the interface signal is invalid, be sure to pull down the power supply for LCD VCC to 0V.
4. LED power must be turn on after power supply for LCD and interface signal are valid.

Product Specification

4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 20 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and Θ equal to 0°.

FIG. 1 presents additional information concerning the measurement equipment and method.

FIG. 1 Optical Characteristic Measurement Equipment and Method

Product Specification

Notes)

1. Contrast Ratio(CR) is defined mathematically as

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

2. Surface luminance is the 5point (1~5)average across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 2.

When I_{LED} = TBD mA, L_{WH} =200cd/m²(Typ.)

3. The variation in surface luminance , The panel total variation (δ_{WHITE}) is determined by measuring L_N at each test position 1 through 13 and then defined as followed numerical formula.
For more information see FIG 2.

$$\delta_{WHITE} = \frac{\text{Maximum}(L_1, L_2, \dots L_{13})}{\text{Minimum}(L_1, L_2, \dots L_{13})}$$

4. Response time is the time required for the display to transition from white to black (rise time, Tr_R) and from black to white(Decay Time, Tr_D). For additional information see FIG 3.

5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.

6. Gray scale specification

* f_v =60Hz

| Gray Level | Luminance [%] (Typ) |

| L39 | 34.82 |
| L47 | 52.49 |
| L55 | 74.17 |
| L63 | 100 |

The diagram shows a rectangular domain with a grid of points. The horizontal axis is labeled H and the vertical axis is labeled V . The domain is bounded by solid lines. The top and bottom boundaries are labeled 10mm with arrows pointing inward. The left and right boundaries are labeled 10mm with arrows pointing inward. The grid consists of 13 points, numbered 1 through 13. Points 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, and 13 are arranged in a grid. Points 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, and 13 are arranged in a grid. The points are numbered as follows: 1 is in the center, 2 is to the right of 1, 3 is to the right of 2, 4 is to the left of 1, 5 is to the right of 4, 6 is to the left of 4, 7 is to the left of 6, 8 is to the left of 7, 9 is to the left of 9, 10 is to the right of 9, 11 is to the left of 11, 12 is to the right of 11, and 13 is to the right of 12. The points are numbered 1 through 13. The points are numbered 1 through 13. The points are numbered 1 through 13.

H,V : ACTIVE AREA
A : H/4 mm
B : V/4 mm
POINTS: 13 POINTS

Active Area

The graph illustrates the optical response of a photoconductor. The y-axis represents the Optical Response in percentage (%), with marked values at 0, 10, 90, and 100. The x-axis represents time. The response is at 100% for a 'white' background and drops to 0% for a 'black' background. Two specific transition times are highlighted: T_{rR} (rise time) for the transition from black to white, and T_{rD} (fall time) for the transition from white to black. Horizontal dashed lines are drawn at the 10% and 90% response levels to indicate the measurement points for these times.

Diagram illustrating the viewing angle range for a rectangular panel. The panel is shown in perspective, with a normal vector pointing upwards. An eye is positioned at a distance r from the center of the panel. The viewing angle range is defined by the angle θ between the normal and the line of sight, and the angle ϕ between the line of sight and the panel's edges. The panel's edges are labeled with their orientation: $\phi = 180^\circ$ Left, $\phi = 0^\circ$ Right, and $\phi = 270^\circ$ Down. The angle $\phi = 90^\circ$ Up is also indicated.

Product Specification

5. Mechanical Characteristics

The contents provide general mechanical characteristics for the model LP133WH1.
In addition the figures in the next page are detailed mechanical drawing of the LCD.

| | | |
|---------------------|--|----------------|
| Outline Dimension | Horizontal | 307.6 ± 0.50mm |
| | Vertical | 183.1 ± 0.50mm |
| | Depth | 5.5mm(Max.) |
| Bezel Area | Horizontal | 299.5 mm |
| | Vertical | 168.4 mm |
| Active Display Area | Horizontal | 293.42mm |
| | Vertical | 164.97mm |
| Weight | 350g (Max.) | |
| Surface Treatment | Hard Coating(3H), Glare treatment of the front polarizer | |

[DETAIL DESCRIPTION OF SIDE MOUNTING SCREW]

Screw Length (A) : Max: 2.5mm / Min: 2.0mm

Screw Depth (B) : Min 2.5mm

Screw Torque : Max 2.5kgf.cm (Measurement Gauge: Torque meter)

Notes : 1. Screw plated through the method of non-electrolytic nickel plating is preferred to reduce possibility that results in vertical and/or horizontal line defect due to the conductive particles from screw surface.

LGD Proposal for system cover design.(Appendix)

| | | |
|---|--|--|
| 1 | Gap check for securing the enough gap between LCM and System cover. | |
|  <p>The diagram illustrates the assembly of the LCM (Liquid Crystal Module) and the system cover. On the left, a photograph shows the 'LCM Reflector Side' with a green 'PCB' (Printed Circuit Board) at the bottom. To the right, a cross-sectional diagram shows the 'Max Thickness' of the LCM assembly. A 'Boundary Line' is indicated by a dashed red line. Three pink arrows point from the system cover towards the LCM assembly, indicating potential contact. A 'Sponge' is shown between the system cover and the LCM assembly, and the 'System Cover' is shown as a separate component.</p> | | |
| Define | <p>1.Rear side of LCM is sensitive against external stress,and previous check about interference is highly needed.</p> <p>2.In case there is something from system cover comes into the boundary above,mechanical interference may cause the FOS defects. (Eg: Ripple, White spot..)</p> | |
| 2 | Check if antenna cable is sufficiently apart from T-CON of LCD Module. | |
| Define |  <p>The diagram shows two scenarios for the antenna cable placement relative to the T-CON (Thin Film Transistor Driver) of the LCD module. In the 'NO GOOD' scenario, the antenna cable is too close to the T-CON. In the 'GOOD' scenario, the antenna cable is sufficiently apart from the T-CON.</p> | |
| | 1.If system antenna is overlapped with T-CON,it might be cause the noise. | |

LPL Proposal for system cover design.

| | | |
|--|---|--|
| 5 | Using a bracket on the top of LCM is not recommended. | |
| <div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="text-align: center;">  <p>bracket</p>  <p>With bracket</p> </div> <div style="text-align: center;">  <p>Without bracket</p> </div> </div> | | |
| Define | <p>1.Condition without bracket is good for mechanical noise,and can minimize the light leakage from deformation of bracket.</p> <p>2.The results shows that there is no difference between the condition with or without bracket.</p> | |
| 6 | Securing additional gap on CNT area.. | |
|  | | |
| Define | <p>1.CNT area is specially sensitive against external stress,and additional gap by cutting on system cover will be helpful on removing the Ripple.</p> <p>2.Using a thinner CNT will be better. (eg: FPC type)</p> | |

Product Specification

6. Reliability

Environment test condition

| No. | Test Item | Conditions |
|-----|---|--|
| 1 | High temperature storage test | Ta= 60°C, 240h |
| 2 | Low temperature storage test | Ta= -20°C, 240h |
| 3 | High temperature operation test | Ta= 50°C, 50%RH, 240h |
| 4 | Low temperature operation test | Ta= 0°C, 240h |
| 5 | Vibration test (non-operating) | Sine wave, 10 ~ 500 ~ 10Hz, 1.5G, 0.37oct/min 3 axis, 1hour/axis |
| 6 | Shock test (non-operating) | Half sine wave, 180G, 2ms one shock of each six faces(l.e. run 180G 2ms for all six faces) |
| 7 | Altitude operating storage / shipment | 0 ~ 10,000 feet (3,048m) 24Hr 0 ~ 40,000 feet (12,192m) 24Hr |

{ Result Evaluation Criteria }

There should be no change which might affect the practical display function when the display quality test is conducted under normal operating condition.

7. International Standards

7-1. Safety

- a) UL 60950-1:2003, First Edition, Underwriters Laboratories, Inc., Standard for Safety of Information Technology Equipment.
- b) CAN/CSA C22.2, No. 60950-1-03 1st Ed. April 1, 2003, Canadian Standards Association, Standard for Safety of Information Technology Equipment.
- c) EN 60950-1:2001, First Edition, European Committee for Electrotechnical Standardization(CENELEC) European Standard for Safety of Information Technology Equipment.

7-2. EMC

- a) ANSI C63.4 "Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electrical Equipment in the Range of 9kHz to 40GHz. "American National Standards Institute(ANSI), 1992
- b) C.I.S.P.R "Limits and Methods of Measurement of Radio Interface Characteristics of Information Technology Equipment." International Special Committee on Radio Interference.
- c) EN 55022 "Limits and Methods of Measurement of Radio Interface Characteristics of Information Technology Equipment." European Committee for Electrotechnical Standardization.(CENELEC), 1998 (Including A1: 2000)

Serial No. is printed on the label. The label is attached to the backside of the LCD module.
This is subject to change without prior notice.

8-2. Packing Form

a) Package quantity in one box : 30 pcs

b) Box Size : 430X378X268mm

9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :
 $V = \pm 200\text{mV}$ (Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)
And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.

9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.
It is recommended that they be stored in the container in which they were shipped.

9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.
Please carefully peel off the protection film without rubbing it against the polarizer.
- (3) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- (4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
