INTRODUCTION

No part of this document shall be copied in any form or by any means without the prior written consent of NEC Corporation.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a product described herein or any other liability arising from use of such application. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or of others.

While NEC Corporation has been making continuous effort to enhance the reliability of its products, the possibility of failures cannot be eliminated entirely. To minimize risks of damage to property or injury to person arising from a failure in an NEC product, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment and anti-failure features.

NEC products are classified into the following three quality grades:

"Standard", "Special", "Specific"

The *"Specific"* quality grade applies only to applications developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a product depend on its quality grade, as indicated below. Customers must check the quality grade of each application before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Military systems, aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems (medical equipment, etc.) and any other equipment

The quality grade of this product is *"Standard"* unless otherwise specified in this document. If customers intend to use this product for applications other than those specified for *"Standard"* quality grade, they should contact NEC Corporation sales representative in advance.

Anti-radioactive design is not implemented in this product.

1. OUTLINE

1.1 STRUCTURE AND PRINCIPLE

NL12876AC39-01 module is composed of the amorphous silicon thin film transistor liquid crystal display (a-Si TFT LCD) panel structure with driver LSIs for driving the TFT (Thin Film Transistor) array and a backlight unit.

The a-Si TFT LCD panel structure is injected liquid crystal material into a narrow gap between the TFT array glass substrate and a color-filter glass substrate.

Color (Red, Green, Blue) data signals from a host system (e.g. PC, signal generator, etc.) are modulated into best form for active matrix system by a signal processing board, and sent to the driver LSIs which drive the individual TFT arrays.

The TFT array as an electro-optical switch regulates the amount of transmitted light from the backlight assembly, when it is controlled by data signals. Color images are created by regulating the amount of transmitted light through the TFT array of red, green and blue dots.

1.2 APPLICATIONS

- Multimedia monitor

1.3 FEATURES

- High luminance
- Ultra wide viewing angles (Lateral electric field)
- High contrast
- High definition
- 8-bit digital RGB signals
- Single link LVDS interface
- Direct light type
- Replaceable backlight unit and inverter

2. GENERAL SPECIFICATIONS

Display area	501.1 (W) × 300.7 (H) mm (typ.)
Diagonal size of display	58.4 cm (23.0 inches)
Drive system	a-Si TFT active matrix
Display color	16,777,216 colors
Pixel	1,280 (H) × 768 (V) pixels
Pixel arrangement	RGB (Red dot, Green dot, Blue dot) vertical stripe
Dot pitch	0.1305 (W) × 0.3915 (H) mm
Pixel pitch	0.3915 (W) × 0.3915 (H) mm
Module size	528.0 (W) × 326.0 (H) × 30.1 (D) mm (typ.)
Weight	2,600 g (typ.)
Contrast ratio	350:1 (typ.)
Viewing angle	<i>At the contrast ratio 10:1</i> <ul style="list-style-type: none"> • Horizontal: Left side 85° (typ.), Right side 85° (typ.) • Vertical: Up side 85° (typ.), Down side 85° (typ.)
Designed viewing direction	<ul style="list-style-type: none"> • Viewing angle with optimum grayscale ($\gamma=2.2$): normal axis
Polarizer surface	Low reflection treatment
Polarizer pencil-hardness	2H (min.) [by JIS K5400]
Color gamut	<i>At LCD panel center</i> 72 % (typ.) [against NTSC color space]
Response time	12 ms (typ.)
Luminance	450 cd/m ² (typ.)
Signal system	Single link LVDS (Receiver: THC63LVD824, THine Electronics Inc.) [8-bit digital signals for data of RGB colors, Dot clock (CLK), Data enable (DE)]
Power supply voltage	LCD panel signal processing board: 5.0V Backlight inverter: 12.0V
Backlight	Direct light type: 12 cold cathode fluorescent lamps (Replaceable parts • Backlight unit: type No. 230LHS01 • Inverter: type No. 230PW011)
Power consumption	<i>At maximum luminance and checkered flag pattern</i> 57.4W (typ.)

3. BLOCK DIAGRAM

4. DETAILED SPECIFICATIONS

4.1 MECHANICAL SPECIFICATIONS

Parameter	Specification	Unit
Module size	528.0 ± 0.5 (W) \times 326.0 ± 0.5 (H) \times 30.1 ± 2.0 (D) Note1	mm
Display area	501.1 ± 0.5 (W) \times 300.7 ± 0.5 (H) Note1	mm
Weight	2,600 (typ.), 2,900 (max.)	g

Note1: See "7.OUTLINE DRAWINGS".

4.2 ABSOLUTE MAXIMUM RATINGS

Parameter		Symbol	Rating	Unit	Remarks
Power supply voltage	LCD panel signal board	VCC	-0.3 to +6.0	V	Ta = 25°C
	Backlight inverter	VDDb	-0.3 to +14	V	
Input voltage for signals	Display signals Note1	VD	-0.3 to 3.4	V	
	BRTI signal	VBI	-0.3 to +1.5	V	
	BRTP signal	VBP	-0.3 to +5.5	V	
	BRTC signal	VBC	-0.3 to +5.5	V	
	PWSEL signal	VBS	-0.3 to +5.5	V	
Storage temperature		Tst	-20 to +60	°C	-
Operating temperature	Front surface	TopF	0 to +55	°C	
	Rear surface	TopR	0 to +66	°C	
Relative humidity Note2		RH	≤ 95	%	Ta ≤ 40°C
			≤ 85	%	40 < Ta ≤ 50°C
			≤ 70	%	50 < Ta ≤ 55°C
Absolute humidity Note2		AH	≤ 73 Note3	g/m³	Ta > 55°C

Note1: Display signals are DA0+/-, DA1+/-, DA2+/-, DA3+/- and CK+/- . Also controller with LVDS receiver are worked by +3.3V from DC/DC converter.

Note2: No condensation

Note3: Ta = 55°C, RH = 70%

4.3 ELECTRICAL CHARACTERISTICS

4.3.1 Driving for LCD panel signal processing board

(Ta = 25°C)

Parameter	Symbol	min.	typ.	max.	Unit	Remarks
Power supply voltage	VCC	4.7	5.0	5.3	V	-
Power supply current	ICC	-	670 Note1	1,000 Note2	mA	VCC = 5.0V
Input voltage for LVDS receiver	Low	VDRL	0	-	0.8	V
	High	VDRH	2.0	-	2.4	V
Differential input threshold voltage for LVDS receiver	Low	VTL	-100	-	-	mV
	High	VTH	-	-	+100	mV

Note1: Checkered flag pattern (by EIAJ ED-2522)

Note2: Pattern for maximum current

Note3: Common mode voltage for LVDS receiver

4.3.2 Driving for backlight inverter

(Ta = 25°C)

Parameter			Symbol	min.	typ.	max.	Unit	Remarks
Power supply voltage			VDDb	11.4	12.0	12.6	V	-
Power supply current			IDDb	-	4,500	5,000	mA	at maximum luminance, VDDb = 12.0V Note1
Input voltage for control system signals	BRTI signal		VBI	0	-	1.0	V	-
	BRTP signal	Low	VBPL	0	-	0.8	V	
		High	VBPH	2.0	-	5.0	V	
	BRTC signal	Low	VBCL	0	-	0.8	V	
		High	VBCH	2.0	-	5.0	V	
	PWSEL signal	Low	VBSL	0	-	0.8	V	
		High	VBSH	2.0	-	5.0	V	
Input current for control system signals	BRTI signal		IBI	-130	-	-	μA	
	BRTP signal	Low	IBPL	-1580	-	-	μA	
		High	IBPH	-	-	3500	μA	
	BRTC signal	Low	IBCL	-610	-	-	μA	
		High	IBCH	-	-	440	μA	
	PWSEL signal	Low	IBSL	-610	-	-	μA	
		High	IBSH	-	-	440	μA	

Note1: The power supply lines (VDDDB and GNDB) occurs large ripple voltage (See "4.3.3 Power supply voltage ripple".) while luminance control. There is the possibility that the ripple voltage produces acoustic noise and signal wave noise in audio circuit and so on. Put a capacitor (5,000 to 6,000μF) between the power source lines (VDDDB and GNDB) to reduce the noise, if the noise occurred in the circuit.

4.3.3 Power supply voltage ripple

This product works, even if the ripple voltage levels are beyond the permissible values as following the table, but there might be noise on the display image.

Parameter	Power supply voltage	Ripple voltage (Measure at input terminal of power supply)	Note1 Unit
VCC	5.0 V	≤ 100	mVp-p
VDDDB	12.0 V	≤ 200	mVp-p

Note1: The permissible ripple voltage includes spike noise.

4.3.4 Fuses

Fusing line	Fuse		Rating	Unit	Remark
	Type	Supplier			
VCC	ICP-S2.3	Rohm Co., Ltd.	4.6	A	Fusing current Note1
			50	V	-
VDDDB	R451010	Littelfuse Inc.	20	A	Fusing current Note1
			125	V	-

Note1: The power capacity should be more than the fusing current rating. If the power capacity is less than the criteria value, the fuse may not blow, and then nasty smell, smoking and so on may occur.

4.4 POWER SUPPLY VOLTAGE SEQUENCE

4.4.1 Sequence for LCD panel signal processing board

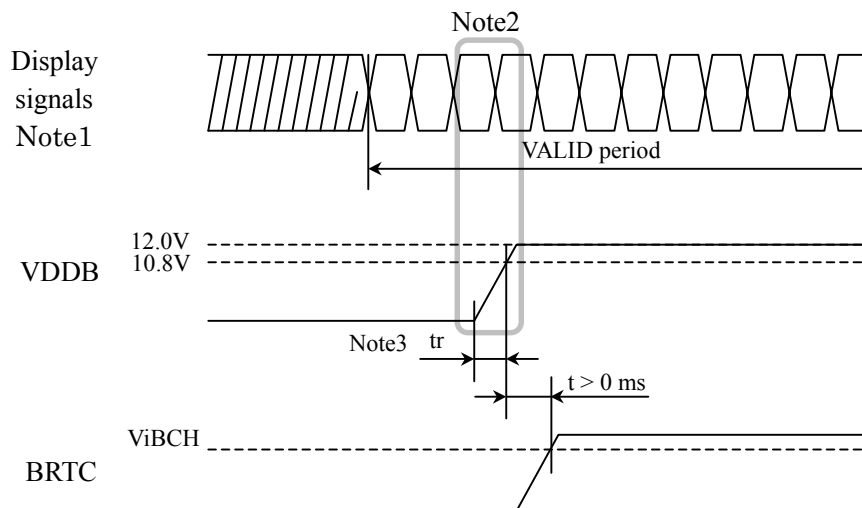

Note1: In terms of voltage variation (voltage drop) while VCC rising edge is below 4.7V, a protection circuit may work, and then this product may not work.

Note2: Display signals (DA0+/-, DA1+/-, DA2+/-, DA3+/- and CK+/-) with 100Ω (Characteristic impedance) must be Low or High-impedance, exclude the VALID period (See above sequence diagram), in order to avoid that internal circuits is damaged.

If some of display signals of this product are cut while this product is working, even if the signal input to it once again, it might not work normally. If customer stops the display signals, they should be cut VCC.

4.4.2 Sequence for backlight inverter

Note1: These are the display signals for LCD panel signal processing board.

Note2: The backlight power voltage (VDDb) should be inputted within the valid period of display signals, in order to avoid unstable data display.

Note3: The t_r should be less than 800ms when BRTC terminal [Socket: CN202, Pin No.: 4] (See "4.5.2 Backlight inverter".) is Open.

4.5 CONNECTIONS AND FUNCTIONS FOR INTERFACE PINS

4.5.1 LCD panel signal processing board

CN1 socket (Module side): FI-SEB20P-HF (Japan Aviation Electronics Industry Limited)

Adaptable plug: FI-SE20M / FI-S20S (Japan Aviation Electronics Industry Limited)

iv><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div><div><div><div></div></div></div></div></div></div>		

Note1: In case of the resistor control method and the voltage control method, noises may appear on the display image depending on the input signals timing for LCD panel signal processing board.

Use PWM method, if interference noises appear on the display image!

Note2: In case BRTC signal is High or Open, the inverter will stop work when BRTP signal is fixed to Low. In this case, backlight will not turn on, even if BRTP signal is inputted again. This is not out of order. Backlight inverter will start to work when power is supplied again.

Note3: These data are the target values.

Note4: See "4.6.2 Detail of PWM timing".

4.6.2 Detail of PWM timing

(1) Timing diagrams

• Outline chart

• Detail of **A** part

(2) Each parameter

Parameter	Symbol	min.	typ.	max.	Unit	Remarks
Luminance control frequency	FL	230	255	280	Hz	Note1, Note2
Duty ratio	DL	0.2	-	1.0	-	Note1, Note3
Non signal period	tPWL	0	-	50	ms	Note4

Note1: Definition of parameters is as follows.

$$FL = \frac{1}{tPW}, DL = \frac{tPWH}{tPW}$$

Note2: See the following formula for luminance control frequency.

$$\text{Luminance control frequency} = tv \times (n+0.25) \text{ [or } (n + 0.75)]$$

$$n = 1, 2, 3 \dots \dots$$

tv: See "4.10.4 Timing characteristics".

The interference noise of luminance control frequency and input signal frequency for LCD panel signal processing board may appear on a display. Set up luminance control frequency so that the interference noise does not appear!

Note3: See "4.6.1 Luminance control methods".

Note4: If tPWL is more than 50ms, the backlight will be turned off by a protection circuit for inverter.

4.7 DISPLAY COLORS AND INPUT DATA SIGNALS

This product can display in equivalent to 16,777,216 colors in 256 scale. Also the relation between display colors and input data signals is as the following table.

Display colors		Data signal (0: Low level, 1: High level)																							
		R7 R6 R5 R4 R3 R2 R1 R0	G7 G6 G5 G4 G3 G2 G1 G0	B7 B6 B5 B4 B3 B2 B1 B0																					
Basic colors	Black	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
	Blue	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	1	1	1	1	1	1	1	1
	Red	1	1	1	1	1	1	1	1	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0

	Blue	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	1	1	1	1	1	1	1	1

4.8 DISPLAY POSITIONS

The following table is the coordinates per pixel (See figure of "4.9 SCANNING DIRECTIONS").

C(0, 0)	C(1, 0)	...	C(X, 0)	...	C(1278, 0)	C(1279, 0)
C(0, 1)	C(1, 1)	...	C(X, 1)	...	C(1278, 1)	C(1279, 1)
• • •	• • •	• •• •	• • •	• •• •	• • •	• •• •
C(0, Y)	C(1, Y)	...	C(X, Y)	...	C(1278, Y)	C(1279, Y)
• • •	• • •	• •• •	• • •	• •• •	• • •	• • •
C(0,766)	C(0,766)	...	C(X,766)	...	C(1278,766)	C(1279,766)
C(0,767)	C(1,767)	...	C(X,767)	...	C(1278,767)	C(1279,767)

4.9 SCANNING DIRECTIONS

The following figures are seen from a front view. Also the arrow shows the direction of scan.

Note1

Note1: Meaning of C (X, Y) and D (X, Y)

C (X, Y): The coordinates of the display position (See "4.8 DISPLAY POSITIONS".)

D (X, Y): The data number of input signal for LCD panel signal processing board

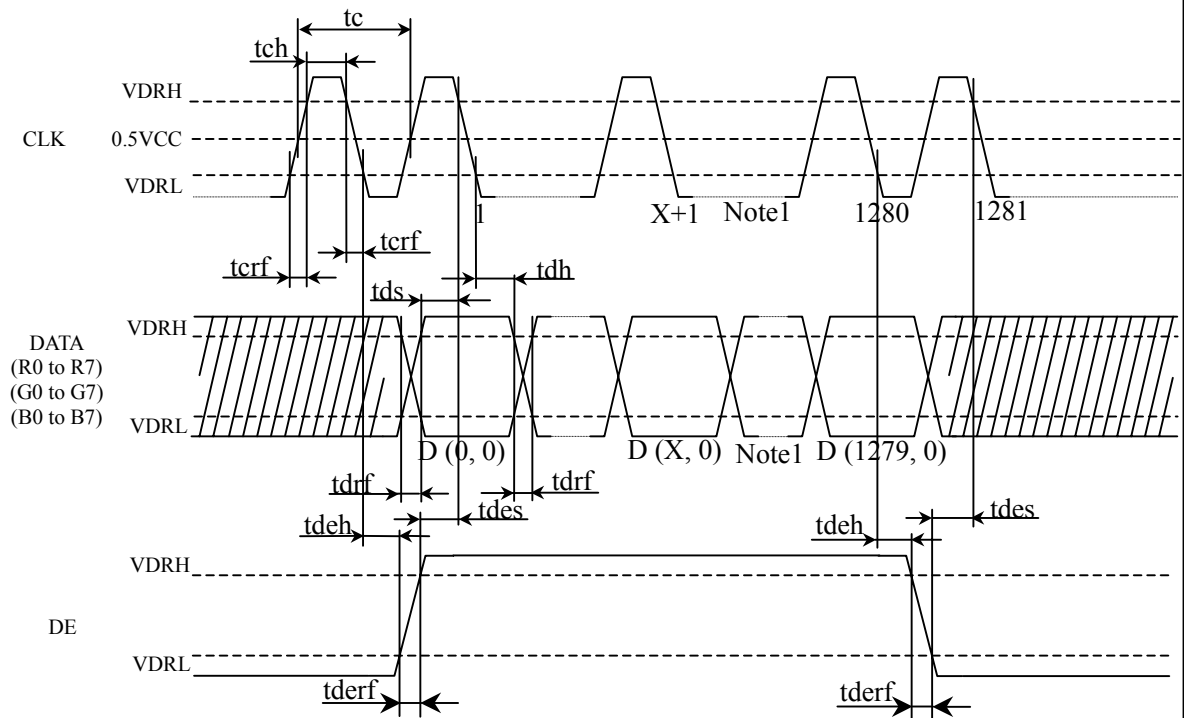

4.10.1 Outline of input signal timings

Timing diagram for DE mode. The diagram shows two signals: Data enable (DE mode) and Display period. The horizontal display period (thd) is indicated by a double-headed arrow above the display period. Note 1 is present below the display period.

The diagram shows the timing of the Data enable (DE) signal in DE mode. The DE signal is high during the display period and low during the vertical display period (tvd). The display period is labeled Note1 and the vertical display period is labeled Note2.

NEC Corporation

• Detail of **A** part

Note1: X is data number from 1 to 1278. See "4.9 SCANNING DIRECTIONS".

4.10.3 Timing characteristics

	Parameter	Note1	Symbol	min.	typ.	max.	Unit	Remarks
CLK	Frequency (LVDS receiver)		tcf	78.0	81.0	84.0	MHz	12.3 ns (typ.) Note1
	Duty		tcd	-	-	-	-	Note1, Note2
	Rise time, Fall time		tcrf	-	-	-	-	
DATA	CLK-DATA	Setup time	tds	-	-	-	-	Note2
		Hold time	tdh	-	-	-	-	
	Rise time, Fall time		tdrf	-	-	-	-	
DE	Horizontal	Cycle	th	-	1,688	-	CLK	Note1, Note3
		Display period	thd	1,280			CLK	Note1
	Vertical (One frame)	Cycle	tv	-	806	-	H	
		Display period	tvd	768			H	
	CLK-DE	Setup time	tdes	-	-	-	-	Note2
		Hold time	tdeh	-	-	-	-	
	Rise time, Fall time		tderf	-	-	-	-	

Note1: Definition of parameters is as follows.

$$tcf = 1/tc, tcd = tch/tc = tch \times tcf, tc = 1CLK, th = 1H$$

Note2: See the data sheet of LVDS transmitter.

Note3: "th" must keep the fluctuation within ± 1 CLK, because of avoidance of image sticking.

4.11 OPTICS

4.11.1 Optical characteristics

Parameter	Note1	Condition	Symbol	min.	typ.	max.	Unit	Remarks
Contrast ratio		White/Black at center $\theta_R = 0^\circ, \theta_L = 0^\circ, \theta_U = 0^\circ, \theta_D = 0^\circ$	CR	200	350	-	-	Note2
Luminance		White at center $\theta_R = 0^\circ, \theta_L = 0^\circ, \theta_U = 0^\circ, \theta_D = 0^\circ$	L	TBD	450	-	cd/m ²	-
Luminance uniformity		-	LU	-	TBD	1.30	-	Note3
Chromaticity	White	x coordinate	Wx	-	0.300	-	-	Note4
		y coordinate	Wy	-	0.315	-	-	
	Red	x coordinate	Rx	-	TBD	-	-	
		y coordinate	Ry	-	TBD	-	-	
	Green	x coordinate	Gx	-	TBD	-	-	
		y coordinate	Gy	-	TBD	-	-	
	Blue	x coordinate	Bx	-	TBD	-	-	
		y coordinate	By	-	TBD	-	-	
Color gamut		$\theta_R = 0^\circ, \theta_L = 0^\circ, \theta_U = 0^\circ, \theta_D = 0^\circ$ at center, against NTSC color space	C	50	72	-	%	
Response time		Black to white	Ton	-	12	TBD	ms	Note5 Note6
		White to black	Toff	-	12	TBD	ms	
Viewing angle	Right	$\theta_U = 0^\circ, \theta_D = 0^\circ, CR = 10$	θ_R	-	85	-	°	Note7
	Left	$\theta_U = 0^\circ, \theta_D = 0^\circ, CR = 10$	θ_L	-	85	-	°	
	Up	$\theta_R = 0^\circ, \theta_L = 0^\circ, CR = 10$	θ_U	-	85	-	°	
	Down	$\theta_R = 0^\circ, \theta_L = 0^\circ, CR = 10$	θ_D	-	85	-	°	

Note1: Measurement conditions are as follows.

$T_a = 25^\circ\text{C}$, $V_{CC} = 5.0\text{V}$, $V_{DDB} = 12.0\text{V}$

Optical characteristics are measured at luminance saturation after 20minutes from working the product, in the dark room. Also measurement method for luminance is as follows.

Note2: See "4.11.2 Definition of contrast ratio".

Note3: See "4.11.3 Definition of luminance uniformity".

Note4: These coordinates are found on CIE 1931 chromaticity diagram.

Note5: Product surface temperature: $T_{opF} = 25^\circ\text{C}$

Note6: See "4.11.4 Definition of response times".

Note7: See "4.11.5 Definition of viewing angles".

4.11.2 Definition of contrast ratio

The contrast ratio is calculated by using the following formula.

$$\text{Contrast ratio (CR)} = \frac{\text{Luminance of white screen}}{\text{Luminance of black screen}}$$

4.11.3 Definition of luminance uniformity

The luminance uniformity is calculated by using following formula.

$$\text{Luminance uniformity (LU)} = \frac{\text{Maximum luminance from ① to ⑤}}{\text{Minimum luminance from ① to ⑤}}$$

The luminance is measured at near the 5 points shown below.

4.11.4 Definition of response times

Response time is measured, the luminance changes from "black" to "white", or "white" to "black" on the same screen point, by photo-detector. Ton is the time it takes the luminance change from 10% up to 90%. Also Toff is the time it takes the luminance change from 90% down to 10% (See the following diagram.).

4.11.5 Definition of viewing angles

5. RELIABILITY TESTS

Test item	Condition	Judgment
High temperature and humidity (Operation)	① $60 \pm 2^{\circ}\text{C}$, RH = 60%, 240hours ② Display data is black.	No display malfunctions Note1
Heat cycle (Operation)	① $0 \pm 3^{\circ}\text{C} \dots 1\text{hour}$ $55 \pm 3^{\circ}\text{C} \dots 1\text{hour}$ ② 50cycles, 4hours/cycle ③ Display data is black.	
Thermal shock (Non operation)	① $-20 \pm 3^{\circ}\text{C} \dots 30\text{minutes}$ $60 \pm 3^{\circ}\text{C} \dots 30\text{minutes}$ ② 100cycles, 30minutes/cycle ③ Temperature transition time is within 5 minutes.	
ESD (Operation)	① 150pF, 150Ω, $\pm 10\text{kV}$ ② 9 places on a panel surface Note2 ③ 10 times each places at 1 sec interval	
Dust (Operation)	① Sample dust: No. 15 (by JIS-Z8901) ② 15 seconds stir ③ 8 times repeat at 1 hour interval	
Vibration (Non operation)	① 5 to 100Hz, 11.76m/s^2 ② 1 minute/cycle ③ X, Y, Z direction ④ 10 times each directions	No display malfunctions Note1 No physical damages
Mechanical shock (Non operation)	① 294m/s^2 , 11ms ② $\pm X$, $\pm Y$, $\pm Z$ direction ③ 3 times each directions	

Note1: Display functions are checked under the same conditions as product inspection.

Note2: See the following figure for discharge points.

6. PRECAUTIONS

6.1 MEANING OF CAUTION SIGNS

The following caution signs have very important meaning. **Be sure to read "6.2 CAUTIONS", after understanding this contents!**

This sign has the meaning that customer will get an electrical shock, if customer has wrong operations.

This sign has the meaning that customer will be injured by himself, if customer has wrong operations.

6.2 CAUTIONS

Do not touch HIGH VOLTAGE PART of the inverter while turned on! Danger of an electrical shock.

- * Pay attention to burn injury for the working backlight! It may be over 35°C from ambient temperature.**
- * Do not shock and press the LCD panel and the backlight! Danger of breaking, because they are made of glass. (Shock: To be not greater 294m/s² and to be not greater 11ms, Pressure: To be not greater 19.6N)**

6.3 ATTENTIONS

6.3.1 Handling of the product

- ① Take hold of both ends without touch the circuit board when customer pulls out products (LCD modules) from inner packing box. If customer touches it, products may be broken down or out of adjustment, because of stress to mounting parts.
- ② Do not hook cables nor pull connection cables such as flexible cable and so on, for fear of damage.
- ③ If customer puts down the product temporarily, the product puts on flat subsoil as a display side turns down.
- ④ Take the measures of electrostatic discharge such as earth band, ionic shower and so on, when customer deals with the product, because products may be damaged by electrostatic.
- ⑤ The torque for mounting screws must never exceed 0.39N·m. Higher torque values might result in distortion of the bezel.
- ⑥ Do not press or rub on the sensitive display surface. If customer clean on the panel surface, NEC Corporation recommends using the cloth with ethanolic liquid such as screen cleaner for LCD.
- ⑦ Do not push-pull the interface connectors while the product is working, because wrong power sequence may break down the product.
- ⑧ Do not give the shock or vibration to the normal direction of a display surface, because image quality may fall.

6.3.2 Environment

- ① Do not operate in dewdrop atmosphere and corrosive gases.
- ② Do not operate or store in high temperature or high humidity atmosphere. Keep the product in antistatic pouch in room temperature, because of avoidance for dusts and sunlight, if customer stores the product.
- ③ Do not operate in high magnetic field. Circuit boards may be broken down by it.
- ④ Use an original protection sheet on the product surface (polarizer). Adhesive type protection sheet should be avoided, because it may change color or properties of the polarizer.

6.3.3 Characteristics

The following items are neither defects nor failures.

- ① Response time, luminance and color may be changed by ambient temperature.
- ② The LCD may be seemed luminance non-uniformity, flicker, vertical seam or small spot by display patterns.
- ③ Optical characteristics (e.g. luminance, display uniformity, etc.) gradually is going to change depending on operating time, and especially low temperature, because the LCD has cold cathode fluorescent lamps.
- ④ Do not display the fixed pattern for a long time because it may cause image sticking. Use a screen saver, if the fixed pattern is displayed on the screen.
- ⑤ The display color may be changed by viewing angle because of the use of condenser sheet in the backlight unit.
- ⑥ The luminance may be changed by voltage variation (voltage drop), even if power source applies recommended voltage to backlight inverter.
- ⑦ Optical characteristics may be changed by input signal timings.

6.3.4 Other

- ① All GND, GNDB, VCC and VDDB terminals should be used without a non-connected line.
- ② Do not disassemble a product or adjust volume without permission of NEC Corporation.
- ③ See "REPLACEMENT MANUAL FOR BACKLIGHT", if customer would like to replace backlight lamps.
- ④ Pay attention not to insert waste materials inside of products, if customer uses screwdrivers.
- ⑤ Pack the product with original shipping package, because of avoidance of some damages during transportation, when customer returns it to NEC Corporation for repair and so on.

REVISION HISTORY

The inside of latest specifications is revised to the clerical error, undecided mater (TBD, etc.) and the major improvement of previous edition. Only a changed part such as functions, characteristic value and so on that may affect a design of customers, are described especially below.

Edition	Document number	Prepared date	Revision contents and signature
