These specification sheets are the proprietary product of AUO and include materials protected under copyright of AUO. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of AUO.

The device listed in these technical literature sheets was designed and manufactured for use in OA equipment.

In case of using the device for applications such as control and safety equipment for transportation (aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.

Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment (trunk lines), nuclear power control equipment and medical or other equipment for life support.

AUO assumes no responsibility for any damage resulting from the use of the device, which does not comply with the instructions, and the precautions specified in these technical literature sheets.

Contact and consult with a AUO sales representative for any questions about this device.

1. Application

This specification applies to a color TFT-LCD module, QD12TL0203.

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit, power supply circuit and a backlight unit. Graphics and texts can be displayed on a 1280×3×800 dots panel with 262,144 colors by using LVDS (Low Voltage Differential Signaling) to interface and supplying +3.3V DC supply voltage for TFT-LCD panel driving and supply voltage for backlight.

The TFT-LCD panel used for this module has very high aperture ratio. A low-reflection and higher-color-saturation type color filter is also used for this panel. Therefore, high-brightness and high-contrast image, which is suitable for the multimedia use, can be obtained by using this module.

Optimum viewing direction is 6 o'clock.

[Features]

- 1) High aperture ratio, high-brightness.
- 2) Brilliant and high contrast image.
- 3) Small footprint and thin shape.
- 4) WXGA resolution (800 vertical by 1280 horizontal pixel array).
- 5) LVDS interface.
- 6) Low power consumption.
- 7) RoHS compliant

3. General Specifications

Parameter	Specifications	Unit
Display size	12.1" Diagonal	in
Active area	261.12 (H)×163.2 (V)	mm
Pixel format	1280 (H)×800 (V)	Pixel
	(1 pixel = R+G+B dots)	
Pixel pitch	0.204(H) × 0.204 (V)	mm
Pixel configuration	R, G, B vertical stripe	
Display mode	Normally white	
Unit outline dimensions (typ.)*1	275.82 (H)×178 (V)×5.2 (T) Max	mm
Mass	260 max.	g
Surface treatment	Anti Glare + Hard Coating 3H	

[Note] : excluding backlight cables. Outline dimensions are shown in this specification.

4. Input Connectors

4-1 Signal Interface Connector

CN1 (1 channel, LVDS signals – NSC/Ti standard and +3.3V DC power supply)

Using connector: DF19L-20P-1H by Hirose or equivalent

6-2. Backlight driving

The backlight system is an edge-lighting type with single CCFT (Cold Cathode Fluorescent Tube).

The characteristics of the lamp are shown in the following table.

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
Lamp current range	I_L	3.0	6.0	6.5	mArms	[Note1]
Lamp voltage	V_L	522	580	638	Vrms	
Lamp power consumption	P_L	—	3.48	—	W	$I_L=6.0\text{mA}$ [Note2]
Lamp frequency	F_L	40	—	60	kHz	[Note3]
Kick-off voltage	V_s	—	—	1110	Vrms	$T_a=25^\circ\text{C}$
		—	—	1330	Vrms	$T_a=0^\circ\text{C}$ [Note4]
Lamp life time	L_L	15000	—	—	hour	[Note5]

[Note1] Lamp current is measured with current meter for high frequency as shown below.

[Note2] Calculated Value for reference ($I_L \times V_L$)

[Note3] Lamp frequency may produce interference with horizontal synchronous frequency, and this may cause beat on the display. Therefore lamp frequency shall be detached as much as possible from the horizontal synchronous frequency and from the harmonics of horizontal synchronous to avoid interference.

[Note4] The voltage above this value should be applied to the lamp for more than 1 second to start-up. Otherwise the lamp may not be turned on.

[Note5] Lamp life time is defined as the time when either ① or ② occurs in the continuous operation under the condition of $T_a = 25^\circ\text{C}$ and $I_L = 6.0 \text{ mArms}$.

- ① Brightness becomes 50 % of the original value under standard condition.
- ② Kick-off voltage at $T_a = 0^\circ\text{C}$ exceeds maximum value.

[Note] The performance of the backlight, for example life time or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp. When you design or order the inverter, please make sure that a poor lighting caused by the mismatch of the backlight and the inverter (miss-lighting, flicker, etc.) never occur. When you confirm it, the module should be operated in the same condition as it is installed in your instrument.

The optical characteristics shall be measured in a dark room or equivalent state with the method shown in Fig.3.

[Note1] Definitions of viewing angle range:

[Note2] Definition of contrast ratio:

The contrast ratio is defined as the following.

$$\text{Contrast Ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

[Note3] Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

[Note4] This shall be measured at center of the screen.

[Note5] Definition of white uniformity:

$$\delta_w = \frac{\text{Maximum Luminance of 5/13 points}}{\text{Minimum Luminance of 5/13 points}}$$

*1) 5 Points are A~E

*1) 13 Points are A~M

11. Display Quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standard.

12. Handling Precautions

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.
- b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- c) Since the front polarizer is easily damaged, pay attention not to scratch it.
- d) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- g) Since CMOS LSI is used in this module, take care of static electricity and injure the human earth when handling.
- h) Observe all other precautionary requirements in handling components.
- i) This module has its circuitry PCBs on the rear side and should be handled carefully in order not to be stressed.
- j) Laminated film is attached to the module surface to prevent it from being scratched. Peel the film off slowly just before the use with strict attention to electrostatic charges. Ionized air shall be blown over during the action. Blow off the 'dust' on the polarizer by using an ionized nitrogen gun, etc..
- k) Cold cathode fluorescent lamp in LCD panel contains a small amount of mercury, please follow local ordinance or regulation for disposal.
- l) Mounting screw hole can stand torque 1.3~1.5 Kgf-cm.

13. Reliability test items

No.	Test item	Conditions
1	High temperature storage test	Ta = 60 °C 240h
2	Low temperature storage test	Ta = -25 °C 240h
3	High temperature & High humidity operation test	Ta = 40 °C ; 90%RH 240h, (As remark #3) (No condensation)
4	High temperature operation test	Ta = 50 °C 240h (The panel temp. must be less than 60 °C)
5	Low temperature operation test	Ta = 0 °C 240h
6	Vibration test (non - operating)	Frequency : 10 ~ 500 Hz, 1.5Grms Test period: 3hrs (1Hr for each of X, Y, Z)
7	Shock test (Non- operating)	Max. Gravity: 220G Pulse width: 2 ms, Half sine wave Direction: $\pm X, \pm Y, \pm Z$; Once for each direction.
8	Altitude test (Operating)	0-10000 feet (3048m) / -20 °C / +60 °C / 24hr
9	Altitude test (Storage)	0-40000 feet (12192m) / 0 °C / +55 °C / 24hr

Remark:

- (1) A failure is defined as the appearance of pixel failed on any color layer or the appearance of horizontal or vertical lines, bars etc.
- (2) Low temperature storage “ Panel must return to operating temperature range prior to activation.”
- (3) Hi temperature / Humidity test
Max. wet-bulb temperature is less than 39°C ; At glass temperature high than 40°C.
Temperature and relative humidity range is shown in the figure below.

14. Others**1) Lot No. Label:**

- 2) Adjusting volume has been set optimally before shipment, so do not change any adjusted value. If adjusted value is changed, the specification may not be satisfied.
- 3) Disassembling the module can cause permanent damage and should be strictly avoided.
- 4) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- 5) If any problem occurs in relation to the description of this specification, it shall be resolved through discussion with spirit of cooperation.
