## 4.0 OPTICAL SPECIFICATIONS

### 4.1 Overview

The test of optical specifications shall be measured in a dark room (ambient luminance  $\leq 1$  lux and temperature =  $25 \pm 2^\circ\text{C}$ ) with the equipment of Luminance meter system (Goniometer system and TOPCON BM-5A) and test unit shall be located at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Theta$  and  $\Phi$  equal to  $0^\circ$ . We refer to  $\Theta_{\varnothing=0}$  ( $= \Theta_3$ ) as the 3 o'clock direction (the "right"),  $\Theta_{\varnothing=90}$  ( $= \Theta_{12}$ ) as the 12 o'clock direction ("upward"),  $\Theta_{\varnothing=180}$  ( $= \Theta_9$ ) as the 9 o'clock direction ("left") and  $\Theta_{\varnothing=270}$  ( $= \Theta_6$ ) as the 6 o'clock direction ("bottom"). While scanning  $\Theta$  and/or  $\varnothing$ , the center of the measuring spot on the Display surface shall stay fixed.  $V_{CC}$  shall be  $3.3 \pm 0.3\text{V}$  at  $25^\circ\text{C}$ .

Notes :

1. Viewing angle is the angle at which the contrast ratio is greater than 10. The viewing angles are determined for the horizontal or 3, 9 o'clock direction and the vertical or 6, 12 o'clock direction with respect to the optical axis which is normal to the LCD surface (see Figure1).

2. Contrast measurements shall be made at viewing angle of  $\Theta = 0$  and at the center of the LCD surface. Luminance shall be measured with all pixels in the view field set first to white, then to the dark (black) state (see Figure1). Luminance Contrast Ratio (CR) is defined mathematically as  $CR = \text{Luminance when displaying a white raster} / \text{Luminance when displaying a black raster}$ .

3. Reference only / Standard Front Surface Treatment Measured with green cover glass. The color chromaticity coordinates specified in Table 4 shall be calculated from the spectral data measured with all pixels first in red, green, blue and white. Measurements shall be made at the center of the panel.

4. Real color coordinates might be changeable after measurement or detail tuning.

5. The luminance value of Typ. 450cd/m2 means the brightness of PWM is 100%.

### 4.3 Optical Measurements

**Figure 1. Measurement Set Up**

**Figure 2. Uniformity Measurement Locations (9 points)**

Note 6.

The White luminance uniformity on LCD surface is then expressed as :

$\Delta Y = ( \text{Minimum Luminance of 9 points} / \text{Maximum Luminance of 9 points} ) * 100$  Refer Figure 2 about measurement points

**Figure 4. Cross Modulation Test Description**

$$\text{Cross-Talk (\%)} = \left| \frac{Y_B - Y_A}{Y_B} \right| \times 100$$

Where:

$Y_A$  = Initial luminance of measured area (cd/m<sup>2</sup>)

$Y_B$  = Subsequent luminance of measured area (cd/m<sup>2</sup>)

The location measured will be exactly the same in both patterns

Note 7.

The electro-optical response time measurements shall be made as Figure 3 by switching the “data” input signal ON and OFF. The times needed for the luminance to change from 10% to 90% is Tr, and 90% to 10% is Td.

Note 8.

Cross-Talk of one area of the LCD surface by another shall be measured by comparing the luminance ( $Y_A$ ) of a 25mm diameter area, with all display pixels set to a gray level, to the luminance ( $Y_B$ ) of that same area when any adjacent area is driven dark (Refer to Figure 4).

## 13.0 HANDLING & CAUTIONS

### 13.1 Cautions when taking out the module

- Pick the pouch only, when taking out module from a shipping package.

### 13.2 Cautions for handling the module

- As the electrostatic discharges may break the LCD module, handle the LCD module with care. Peel a protection sheet off from the LCD panel surface as slowly as possible.
- As the LCD panel and back - light element are made from fragile glass (epoxy) material, impulse and pressure to the LCD module should be avoided.
- As the surface of the polarizer is very soft and easily scratched, use a soft dry cloth without chemicals for cleaning.
- Do not pull the interface connector in or out while the LCD module is operating.
- Put the module display side down on a flat horizontal plane.
- Handle connectors and cables with care.

### 13.3 Cautions for the operation

- When the module is operating, do not lose CLK, DE signals. If any one of these signals were lost, the LCD panel would be damaged.
- Obey the supply voltage sequence. If wrong sequence is applied, the module would be damaged.

### 13.4 Cautions for the atmosphere

- Dew drop atmosphere should be avoided.
- Do not store and/or operate the LCD module in a high temperature and/or humidity atmosphere. Storage in an electro-conductive polymer packing pouch and under relatively low temperature atmosphere is recommended.

### 13.5 Cautions for the module characteristics

- Do not apply fixed pattern data signal to the LCD module at product aging.
- Applying fixed pattern for a long time may cause image sticking.

### 13.6 Other cautions

- Do not re-adjust variable resistor or switch etc.
- When returning the module for repair or etc., Please pack the module not to be broken.  
We recommend to use the original shipping packages.
