Specification of FUJITSU TFT-LCD module

FLC43XWC6V-02

Approval
 Date : By :

This Product is designed, developed and manufactured as contemplated for general use, including without limitation, general office use, personal use, household use, and ordinary industrial use, but is not designed, developed and manufactured as contemplated for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could lead directly to death, personal injury, severe physical damage or other loss (hereinafter "High Safety Required Use"), including without limitation, nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system. If customer's product possibly falls under the category of High Safety Required Use, please consult with our sales representatives in charge before such use. In addition, Fujitsu shall not be liable against the Customer and/or any third party for any claims or damages arising in connection with the High Safety Required Use of the Product without permission.

Specification No. : Tech Bes LCD-00087

Issue Date : Nov. 7, 2001

Issued by :

【FLC43XWC6V-02】																																																															
A	<h3>1. APPLICATIONS</h3> <p>This specification is applied to the 17.0 in. XGA-WIDE supported TFT-LCD module.</p>																																																														
	<h3>2. PRODUCT NAME AND MODEL NUMBER</h3> <p><u>2-1. Product Name</u> : LCD Module</p> <p><u>2-2. Model Name</u> : FLC43XWC6V-02</p>																																																														
B	<h3>3. OVERVIEW</h3> <p>This LCD module has a TFT active matrix type liquid crystal panel 1280×768 pixels, and diagonal size of 43cm (17.0-inch). This module supports 1280×768 XGA-WIDE mode (Non-interlace).</p> <p>This LCD has a digital RGB interface and can display 262,144 colors.</p> <p>Timing control signal is “Data enable signal : ENAB” only. (Data enable mode)</p> <p>Even and odd data are transmitted at the same timing in the interface, so data lines are 36. (R, G, B each 6 bit ×2) The signal level of this interface is +3.3V CMOS level or 5V TTL level.</p> <p>The power supply of this LCD module is +5v DC single.</p>																																																														
C	<h3>4. CONFIGURATION</h3> <p>This LCD module consists of a LCD panel, LCD driving circuit, control circuit, interface circuit and backlight unit.</p> <p>The LCD panel is active matrix TFT type and Fujitsu’s unique MVA (<u>M</u>ulti-<u>d</u>omain <u>V</u>ertical <u>A</u>lignment) liquid crystal technology is adopted in it. The LCD driving circuit is integrated in IC chips, which are bonded on plastic wiring film (hereinafter TAB driver-IC), and the output terminals of the IC chips are connected to the LCD panel. The control circuit and the interface circuit are mounted on three kinds of printed circuit board (hereinafter PCB) and the input of the TAB driver-ICs are connected to the PCBs.</p> <p>With such circuit construction, the image data received by the interface circuit is forwarded to the control circuit and the control circuit modulates the image data to LCD driving signals. The TAB driver ICs buffer the LCD driving signals and output driving voltages to the LCD panel.</p> <p>These LCD parts such as the LCD panel, the TAB-ICs and the PCBs are assembled together with the backlight module in a plastic case and a metal frame.</p> <p>Fig.4-1 shows a block diagram of this LCD module.</p>

D	<p>(*1) Typical current value is measured when color bar pattern is displayed at V_{CC}=5.0V. Maximum current value is measured when 55/63 and 63/63 gray scale pattern every 2 pixel is displayed at V_{CC}=4.75V. Without rush current.</p> <p>(*2) These items prescribe the rush current for starting internal DC/DC. Charging current to capacitors of V_{CC} is not prescribed.</p> <p>(*3) Backlight specifications are valid when using a suitable inverter such as the “FLCV-15” of Fujitsu Limited.</p> <p>(*4) Tube current (I_L) shows the value of the current that is consumed at one lamp. This LCD module has 4 lamps. Each 2 lamps are placed at upper and lower side of the display. 2 lamps are connected in parallel. Each low voltage terminals are bound into 1 line cable, which connected to the backlight connector.</p>

Note 6) Definition of Optimum Viewing Angle

Based on Fig.9-7.

Fig.9-7. Definition of Viewing AngleNote 7) Definition of Brightness Uniformity

Brightness uniformity is defined by the following formula.

Brightness (I1~I9) are measured at the following 9 points (① ~ ⑨) on the display area shown in Fig.9-8.

$$\text{Brightness Uniformity } (\Delta L) = \frac{|\text{Min. In}|}{|\text{Max. In}|} \times 100 (\%), n=1 \text{ to } 9$$

Note) Each measurement point (① ~ ⑨) defines the center spot of Brightness Meter view.
The tolerance of measurement position is $\pm 5\text{mm}$.

Fig.9-8. Measurement Points

10-3. Input Signal Timing

Table 10-3 and Fig.10-3 shows the input signal timing.

Table 10-3. Timing Characteristics

(T=0~50°C, V_{cc}=5±0.25V)

Item		Symbol	Min.	Typ.	Max.	Unit	Remark	
DCLK signal (Clock)	Period	Tc	30.764	30.764	40.000	ns	fc=1/Tc *1	
	Frequency	fc	25.000	32.505	32.505	MHz		
	Duty	Tch/Tc	45	50	55	%		
	High time	TclkH	5.0	—	—	ns		
	Low time	TclkL	5.0	—	—	ns		
	Rise time	Tclkr	—	—	5.0	ns		
	Fall time	Tclkf	—	—	5.0	ns		
DCLK·Data Timing	Setup time	Tset	4.5	—	—	ns		
	Hold time	Thold	6.5	—	—	ns		
Data·ENAB timing	Horizontal	Period	Th	672	672	1566	DCLK	fh=1/Th *2,3
		Frequency	fh	46.6	48.3	48.3	kHz	
		Display period	Thd	640	640	640	DCLK	
	Vertical	Period	Tv	776	806	806	Th	16.67ms *2,3
		Frequency	fv	60	60	60	Hz	
		Display period	Tvd	768	768	768	Th	
	Data·ENAB timing		Tdn	0	0	0	DCLK	*4

*1) DCLK signal input must be valid while power supply is applied.

*2) Display position is specified by the ENAB signal.

- Horizontal display position is specified by the rise of ENAB signal. The data of a horizontal line, which is latched by the falling edge of 1st DCLK right after the rise of ENAB, is displayed on the left edge of the screen.
- Vertical display position is specified by the rise of ENAB after a “Low” level period equivalent to eight times of horizontal period. The 1st data corresponding to one horizontal line after the rise of ENAB is displayed at the top line of screen.

*3) If a period of ENAB “High” is less than 640 DCLK or less than 768 lines, the rest of the screen displays black.

*4) The display position does not fit to the screen if the ENAB period and the effective data period do not synchronize with each other.

Fig.10-4. Correspondence Data and Display Position												
10-5. Power Supply Sequence												
The sequence of input signals and On/Off of the power supply of this LCD module should be in the specification shown in Fig.10-4 to prevent latch-up of the driver ICs and DC driving of the LCD panel.												
<p>The diagram shows two waveforms: Vcc and Input signal. Vcc transitions from OFF (0V) to ON (4.75V) with a rise time T4 ≤ 20ms, and from ON (4.75V) to OFF (0V) with a fall time T5 ≤ 20ms (Voltage descent). The Input signal transitions from L to H with a rise time T1 (10% to 90%) and from H to L with a fall time T2 (90% to 10%). Both T1 and T2 are constrained to 10ms ≤ T1 ≤ 40ms and 10ms ≤ T2 ≤ 40ms. A third transition T3 is shown from H to L with a constraint of 0ms ≤ T3 ≤ 40ms. A low-level pulse on Vcc is shown with a width of 0.1s ≤ T6 and a level of 0.5V. High-level levels are 4.75V and a low-level level is 4.5V.</p>

11. BACKLIGHT SPECIFICATIONS

11-1. Pin Configuration for Backlight

Table 11-1(a) and 11-1(b) shows the description and pin assignment of the connectors (CN-A and B) for the Backlight of this LCD module.

Table 11-1(a) Pin Assignment of CN-A

Pin	Signal	Function
1	V _{L1}	Power supply for CCFL 1
2	V _{L2}	Power supply for CCFL 2
3	NC	
4	GND	Ground (for V _{L1} , 2)

Table11-1(b) Pin Assignment of CN-B

Pin	Signal	Function
1	V _{L3}	Power supply for CCFL 3
2	V _{L4}	Power supply for CCFL 4
3	NC	
4	GND	Ground (for V _{L3} , 4)

Cable color (CN-A and B) : White at GND, Pink at V_{L1,2,3} and 4

Connector	: Housing	: BHR-04VS-1
	: Contact	: SBH-001T-P0.5
User's Connector	: Post with base	: SM04(4.0)B-BHS-1-TB
Supplier	: Japan Solderless Terminal Trading Company LTD. (J.S.T.)	

11-2. CCFL

Supplier : SANKEN ELECTRIC CO., LTD Part No. SD26E3850E8350B3113000

11-3. Life

The life of the backlight is a minimum of 25,000 hours at the following conditions.

(1) Working conditions

Ambient temperature : $25 \pm 5^\circ\text{C}$
 Tube current(I_L) : (10.5mA or less)

(2) Definition of life

Brightness becomes 50% or below 50% of the minimum brightness value shown in Table 9-1.
The lamp cannot be lit by the breakdown voltage of 1600Vrms.
Lamp is flashing.

11-4. Lamp Assembly set (for replacement)

Lamp Assembly set (with charge) is prepared for maintenance.
This set consists of an upper lamp assembly and a lower lamp assembly.

Type number : FLCL-21

Zone • Inside display dot area (369.6× 221.8mm) • Display dot area means active area. • One pixel consists of 3 dots (red, green and blue). • Foreign particle and scratch unharmed to display image, such as the foreign particle under polarizer film but outside of the display area and scratch on metal bezel, backlight module or polarizer film out of the display area, etc., are not counted.									
		12-2. Bright spots (1) Bright spots by the defect of TFT. • Visible under bias of 2% ND filter High bright spot R・G • Visible under 5% but invisible under 2% ND filter..... Low bright spot R・G・B • Invisible under bias of 5% ND filter Not counted (2) Bright spots by the light passing through tears, breaks, etc in color filter. • Exceed size of a half dot High bright spot • A half dot or less Not counted (3) Bright spots by the light passing through tears, breaks, etc in chromium mask. • Exceed 50μm High bright spot • 50μm or less Not counted									
		12-3. Test condition • Inspector must observe the LCD screen from the normal direction under the illumination by a single 20W fluorescent lamp. The distance between the LCD screen and the inspector should be a height of 50cm above the worktable. The vertical illuminance is 300 to 600lux (reference value). • Bright spot should be counted under entire black screen. • Dark spot should be counted under entire white screen. • Frame frequency should be 60Hz.									
D	12-4. Specifications Table 12-4 shows the appearance standard. (Note1) Please do not mistake a single bright spot for a bright spot connection due to Cs(supplemental capacitance) line at the center of each dot. (Note2) If a pixel is dark partially, it connects into the number of dark spots in accordance with following rule. (a) $S < 1/3$: Not count. Only one of 4 dark connection is allowed. (b) $1/3 \leq S < 2/3$: Considered as 0.5 dot. (c) $2/3 \leq S$: Considered as 1 dot. <div style="text-align: center;">(S=Dark spot size/dot size)</div>

13. ENVIRONMENTAL SPECIFICATIONS							
Table 13-1 shows the environmental specifications.							
Table 13-1. Environmental Specifications							
Item		Condition		Remark			
Temperature		Operation	0~60°C (Note1)	Temperature on surface of LCD panel (display area.)			
		Storage	-20~60°C				
Humidity		Operation	20~85%RH	Maximum wet-bulb temperature should not exceed 29°C. No condensation.			
		Storage	5~85%RH				
Vibration		Non-operation	10~500Hz, 1 cycle/20minute, 2G, 1.5mm max, 2hour each X, Y and Z directions	For single module without package.(Note2)			
Shock		Non-operation	30G, 6ms, 1time each ±X, ±Y and ±Z directions.				
Note1: Temperature on surface of LCD panel should be under 60 .							
Note2: Table 13-2 and Fig. 13-1 show the shock resistance standard when module is packaged.							
Table 13-2. Shock Resistance Standard when Module is Packaged							
Dropping location		Dropping height		Count			
A ~ J		60cm		1 time

【FLC43XWC6V-02】																																																											
A	16.WARRANTY The warranty period is one year after manufacturing. Products which fail during this period are repaired or replaced without charge, unless the failure is caused by user.											A																																															
B	17.PRECAUTIONS Adhere to the following precautions to properly use this LCD module.											B																																															
	(1) Fail safe design LCD module has an inherent chance of failure. Customers must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.																																																										
C	(2) Handling of LCD panel Do not apply any strong mechanical shock to the LCD panel. Since the LCD panel is made of glass, excessive shock may damage the panel or cause a malfunction.											C																																															
	Do not press hard on the LCD panel surface. In the LCD panel, the gap between two glass plates is kept precisely and uniformly to maintain display's characteristics and reliability. If this panel is pressed hard, the following troubles occurs.																																																										
D	(a) Ununiformity of color (b) Orientation of liquid crystal becomes disordered Problem (a) returns to normal after a while. Problem (b) returns to normal if power is shut off once then turned on again. However these operations should be avoided to insure reliability.											D																																															
	Do not scratch the polarizer film on the LCD panel surface.																																																										
E	• Do not press or rub the display surface with a hard tool, pincet, etc. • For handling, use cotton or conductive gloves so that the display surface is not stained. • For If the display surface is stained by dust or dirt, clean it as follows with a soft cloth (deer skin, etc.)											E																																															
	[Dust] Wipe off with a soft cloth. (do not rub.) [Dirt] Wipe off lightly with a soft cloth after soaking in the clear water and squeezing hard out of water drops. Only if the dirt is hardly wiped off, use isopropyl alcohol or ethanol. Be careful not to splash the water or the solvent and water penetrated between the polarizer and the LCD panel. Do not use solvents such as ketone (acetone, etc.) and aromatics (xylene, toluene, etc.)																																																										
• If saliva or water drops are left for long time, it may deform partial deformation or discolored. Wipe off immediately in the same way as for dirt. • Do not allow oil to adhere to the module, since the cleaning of oil is difficult.																																																											
Do not place or contact objects on the display surface for a long period of time. That's because this may make some parts of the LCD module distorted and the display quality may decline.
