Product Specification	
Product Name	Smartwatch X1
Model Number	SW-X1-001
Color Options	Black, Silver, Gold
Screen Size	1.6 inches
Resolution	240 x 240 pixels
Material	Aluminum Case, Silicone Strap
Weight	35g
Water Resistance	50m
Battery Life	7 days
Connectivity	Bluetooth 5.0, Wi-Fi
OS Support	iOS 12+, Android 8.0+
Warranty	1 Year

[illegible]

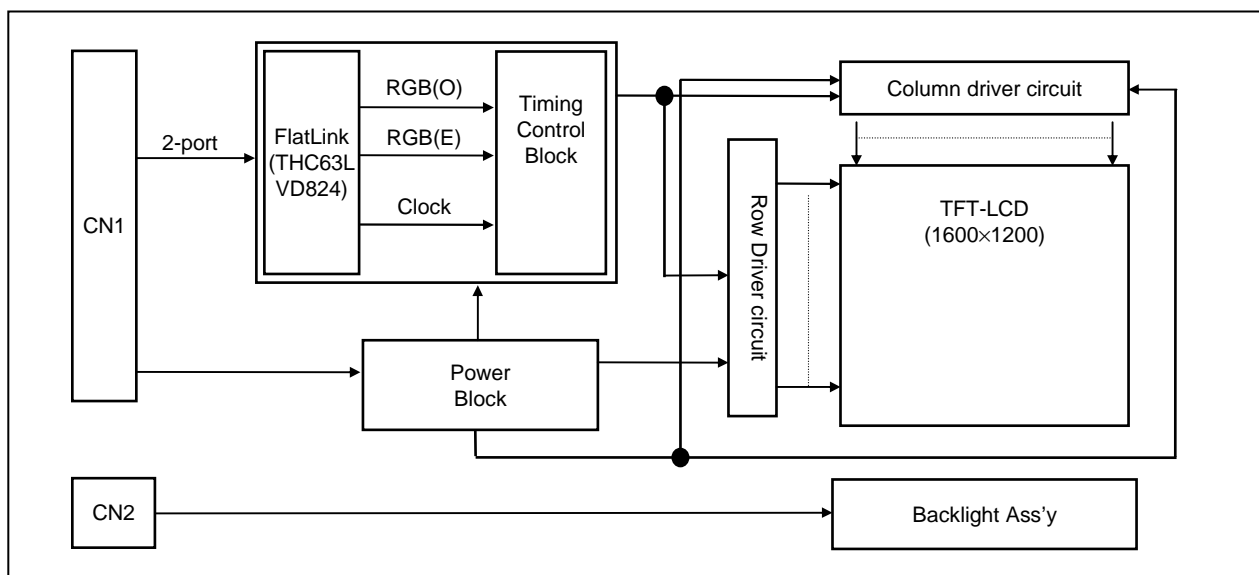

## Product Specification

### 1. General Description

The LP150U03 is a Color Active Matrix Liquid Crystal Display with an integral Cold Cathode Fluorescent Lamp(CCFL) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. This TFT-LCD has 15.0 inches diagonally measured active display area with UXGA resolution(1200 vertical by 1600 horizontal pixel array) Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 6-bit gray scale signal for each dot, thus, presenting a palette of more than 262,144 colors.

The LP150U03 has been designed to apply the interface method that enables low power, high speed, low EMI.

The LP150U03 is intended to support applications where thin thickness, low power are critical factors and graphic display are important. In combination with the vertical arrangement of the sub-pixels, the LP150U03 characteristics provide an excellent flat display for office automation products such as Notebook PC.

### General Features

Active Screen Size	15.0 inches(38.1cm) diagonal
Outline Dimension	317.3(H) x 241.5(V) mm(Typ.), x 6.1(D) mm(Max.)
Pixel Pitch	0.1905 mm x 0.1905 mm
Pixel Format	1600 horiz. By 1200 vert. Pixels RGB strip arrangement
Color Depth	6-bit, 262,144 colors
Luminance, White	150 cd/m <sup>2</sup> (Typ.)
Power Consumption	Circuit : (1.45W, at Mosaic), Backlight : (3.43W Typ.)
Weight	570 g (typ.)
Display Operating Mode	Transmissive mode, normally white
Surface Treatment	Hard coating(3H) Anti-glare treatment of the front polarizer

## Product Specification

### 2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

**Table 1. ABSOLUTE MAXIMUM RATINGS**

Parameter	Symbol	Values		Units	Notes
		Min	Max		
Power Input Voltage-ON	VCC	2.7	4.0	Vdc	at 25 ± 5°C
Power Input Voltage-OFF	GND	-0.3	0.3	Vdc	at 25 ± 5°C
Operating Temperature	T <sub>OP</sub>	0	50	°C	1
Storage Temperature	T <sub>ST</sub>	-20	60	°C	1
Operating Ambient Humidity	H <sub>OP</sub>	10	90	%RH	1
Storage Humidity	H <sub>ST</sub>	10	90	%RH	1
Electrostatic Durability (ESD)	V <sub>ESD</sub>	± 8.0		kV	2

Note : 1. Temperature and relative humidity range are shown in the figure below.

Wet bulb temperature should be 39°C Max, and no condensation of water.

2. Condition 1) Non-operation, 150pF-330Ω, 25°C, 40~60%RH
- 2) I/F Connector pins are subjected.
- 3) The surface of Metal bezel and LCD are subjected **except interface connector(LCD side).**
- 4) Discharge interval time 1sec, 10 times each place

Product Specification

### 3. Electrical Specifications

#### 3-1. Electrical Characteristics

The LP150U03 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input which powers the CCFL, is typically generated by an inverter. The inverter is an external unit to the LCD.

**Table 2. ELECTRICAL CHARACTERISTICS**

Parameter		Symbol	Values			Unit	Notes
			Min	Typ	Max		
MODULE :							
Power Supply Input Voltage		VCC	3.0	3.3	3.6	Vdc	
Power Supply Input Current		I <sub>CC</sub>	380	440	500	mA	1
Power Consumption		Pc	1.25	1.45	1.65	Watt	1
Differential Impedance		Zm	90	100	110	ohm	2
LAMP :							
Operating Voltage		V <sub>BL</sub>	655(6mA <sub>RMS</sub> )	685(5mA <sub>RMS</sub> )	805(3mA <sub>RMS</sub> )	V <sub>RMS</sub>	4
Operating Current		I <sub>BL</sub>	3.0	5.0	6.0	mA <sub>RMS</sub>	
Established Starting Voltage		Vs					5
	at 25 °C		-	-	1140	V <sub>RMS</sub>	
	at 0 °C		-	-	1370	V <sub>RMS</sub>	
Operating Frequency		f <sub>BL</sub>	45	58	80	kHz	6
Discharge Stabilization Time		Ts	-	-	3	Min	7
Power Consumption		P <sub>BL</sub>	-	3.43	3.77	Watt	8
Life Time			10,000	-	-	Hrs	9

Note : The design of the inverter must have specifications for the lamp in LCD Assembly.

The performance of the Lamp in LCM, for example life time or brightness, is extremely influenced by the characteristics of the DC-AC inverter. So all the parameters of an inverter should be carefully designed so as not to produce too much leakage current from high-voltage output of the inverter. When you design or order the inverter, please make sure unwanted lighting caused by the mismatch of the lamp and the inverter(no lighting, flicker, etc) never occurs. When you confirm it, the LCD – Assembly should be operated in the same condition as installed in you instrument.

1. The specified current and power consumption are under the VCC=3.3V, 25°C, f<sub>v</sub>=60Hz condition whereas Mosaic pattern is displayed and f<sub>v</sub> is the frame frequency.
2. This impedance value is needed to proper display and measured from LVDS T<sub>x</sub> to the mating connector.
3. The duration of rush current is about 20ms.
4. The variance of the voltage is ± 10%.
5. The voltage above V<sub>s</sub> should be applied to the lamps for more than 1 second for start-up. Otherwise, the lamps may not be turned on. The used lamp current is the lamp typical current.

Product Specification

6. The output of the inverter must have symmetrical(negative and positive) voltage waveform and symmetrical current waveform.(Unsymmetrical ratio is less than 10%) Please do not use the inverter which has unsymmetrical voltage and unsymmetrical current and spike wave.  
Lamp frequency may produce interface with horizontal synchronous frequency and as a result this may cause beat on the display. Therefore lamp frequency shall be as away possible from the horizontal synchronous frequency and from its harmonics in order to prevent interference.
7. Let's define the brightness of the lamp after being lighted for 5 minutes as 100%.  
 $T_s$  is the time required for the brightness of the center of the lamp to be not less than 95%.
8. The lamp power consumption shown above does not include loss of external inverter.  
The used lamp current is the lamp typical current.
9. The life is determined as the time at which brightness of the lamp is 50% compared to that of initial value at the maximum lamp current( $6.0\text{mA}_{\text{RMS}}$ ) on condition of continuous operating at  $25 \pm 2^\circ\text{C}$
10. Requirements for a system inverter design, which is intended to have a better display performance, a better power efficiency and a more reliable lamp, are following.  
It shall help increase the lamp lifetime and reduce leakage current.
  - a. The asymmetry rate of the inverter waveform should be less than 10%.
  - b. The distortion rate of the waveform should be within  $\sqrt{2} \pm 10\%$ .

\* Inverter output waveform had better be more similar to ideal sine wave.

\* Asymmetry rate:

$$|I_p - I_{-p}| / I_{\text{rms}} * 100\%$$

\* Distortion rate

$$I_p \text{ (or } I_{-p}) / I_{\text{rms}}$$

- ※ Do not attach a conducting tape to lamp connecting wire.  
If the lamp wire attach to a conducting tape, TFT-LCD Module has a low luminance and the inverter has abnormal action. Because leakage current is occurred between lamp wire and conducting tape.

Product Specification

### 3-2. Interface Connections

The interface connections are compatible with **ISP (Industry Standard Panels) 15.0" Mounting and Top Level Interface Requirements (Version2, June,2000)** defined by **SPWG (Standard Panels Working Group)**. This LCD employs two interface connections, a 30 pin connector is used for the module electronics and the other connector is used for the integral backlight system.

The electronics interface connector is a model FI-XB30SR-HF11 manufactured by JAE or equivalent. The pin configuration for the connector is shown in the table below.

**Table 3. MODULE CONNECTOR PIN CONFIGURATION (CN1)**

Pin	Symbol	Description	Notes
1	VSS	Ground	<p>1. Interface chips 1.1 LCD : LPZ4E204S6L (Thine) (THC63LVDF824 core + Timing Controller) 1.2 System : THC63LVDM823A (Thine)</p> <p>2. Connector 2.1 LCD : FI-XB30SR-HF11 (JAE) or compatible 2.2 Mating - Wire type : FI-X30H (JAE) - FPC type : FI-X30M (JAE) 2.3 Connector pin arrangement</p> 
2	VCC	Power Supply, 3.3V Typ.	
3	VCC	Power Supply, 3.3V Typ.	
4	VEDID	DDC 3.3V power	
5	NC	No Connection	
6	ClkEDID	DDC Clock	
7	DATAEDID	DDC Data	
8	RA1-	Odd Channel Differential signal	
9	RA1+	Odd Channel Differential signal	
10	VSS	Ground	
11	RB1-	Odd Channel Differential signal	
12	RB1+	Odd Channel Differential signal	
13	VSS	Ground	
14	RC1-	Odd Channel Differential signal	
15	RC1+	Odd Channel Differential signal	
16	VSS	Ground	
17	RCLK1-	Odd Channel differential clock	
18	RCLK1+	Odd Channel differential clock	
19	VSS	Ground	
20	RA2P1-	Even Channel Differential signal	
21	RA2P1+	Even Channel Differential signal	
22	VSS	Ground	
23	RB2-	Even Channel Differential signal	
24	RB2+	Even Channel Differential signal	
25	VSS	Ground	
26	RC2-	Even Channel Differential signal	
27	RC2+	Even Channel Differential signal	
28	VSS	Ground	
29	RCLK2-	Even Channel differential clock	
30	RCLK2+	Even Channel differential clock	

Note: All GND(ground) pins should be connected together and to GND which should also be connected to the LCD's metal frame. All VCC (power input) pins should be connected together.

The backlight interface connector is a model BHSR-02VS-1, manufactured by JST. The mating connector part number is SM02B-BHSS-1 or equivalent.

**Table 4. BACKLIGHT CONNECTOR PIN CONFIGURATION (CN2)**

Pin	Symbol	Description	Notes
1	HV	Power supply for lamp (High voltage side)	1
2	LV	Power supply for lamp (Low voltage side)	1

Notes : 1. The high voltage side terminal is colored pink and the low voltage side terminal is White

## Product Specification

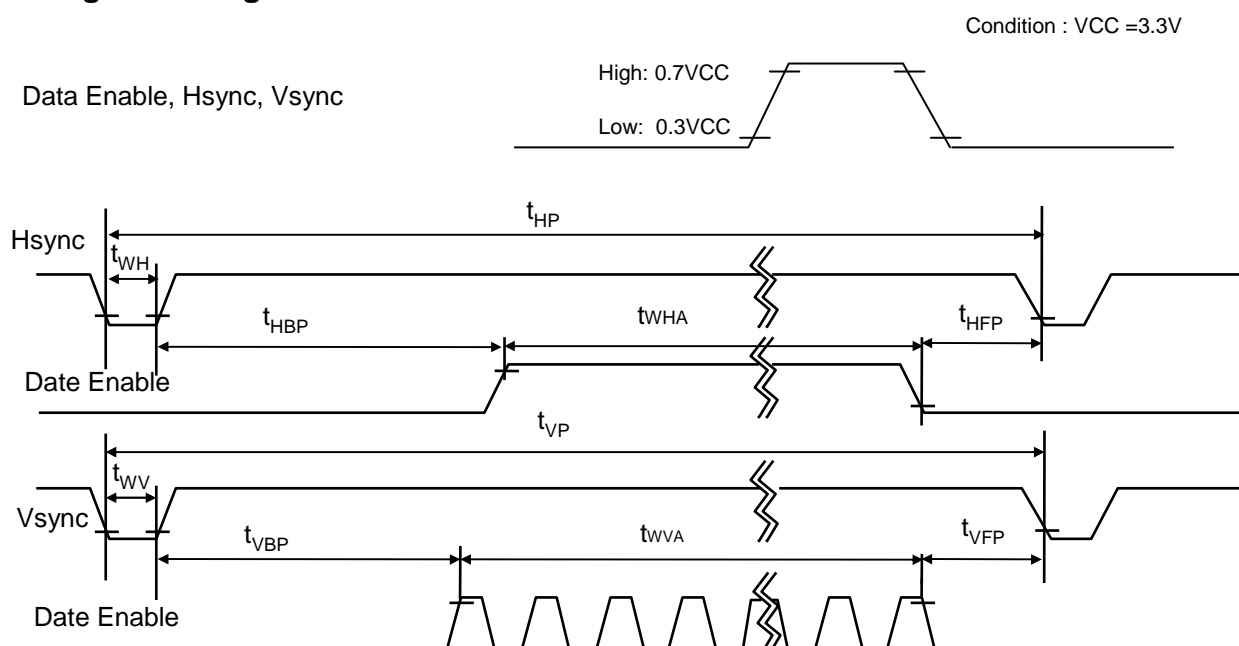

### 3-3. Signal Timing Specifications

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications and specifications of LVDS Tx/Rx for it's proper operation.

**Table 5. TIMING TABLE**

ITEM	Symbol		Min	Typ	Max	Unit	Note
DCLK	Frequency	fCLK	80	81	82	MHz	12.35ns
Hsync	Period	tHP	900	1080	1100	tCLK	
	Width	tWH	8	96	-		
Vsync	Period	tVP	1210	1250	1400	tHP	
	Frequency	fv	60	60	60		
	Width	tWV	2	3	-		
Data Enable	Horizontal back porch	tHBP	32	152	-	tCLK	
	Horizontal front porch	tHFP	16	32	-		
	Vertical back porch	tVBP	3	46	-	tHP	
	Vertical front porch	tVFP	2	3	-		

### 3-4. Signal Timing Waveforms

**Product Specification**
**3-5. Color Input Data Reference**

The brightness of each primary color (red, green and blue) is based on the 6-bit gray scale data input for the color ; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

**Table 6. COLOR DATA REFERENCE**

Color		Input Color Data																	
		RED						GREEN						BLUE					
		MSB			LSB			MSB			LSB			MSB			LSB		
		R 5	R 4	R 3	R 2	R 1	R 0	G 5	G 4	G 3	G 2	G 1	G 0	B 5	B 4	B 3	B 2	B 1	B 0
Basic Color	Black	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0

T <sub>4</sub>	200	-	-	ms
T <sub>5</sub>	0	-	50	ms
T <sub>6</sub>	0	-	100	ms
T <sub>7</sub>	400	-	-	ms

- Notes :
1. Please avoid floating state of interface signal at invalid period.
  2. When the interface signal is invalid, be sure to pull down the power supply for LCD VCC to 0V.
  3. Lamp power must be turn on after power supply for LCD and interface signal are valid.

## Product Specification

### 4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 30 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\Theta$  equal to 0°.

FIG. 1 presents additional information concerning the measurement equipment and method.

**FIG. 1 Optical Characteristic Measurement Equipment and Method**

	y axis, down ( $\Phi=270^\circ$ )	$\Theta_d$	35	-	-	degree	
Gray Scale							6

## Product Specification

Notes 1. Contrast Ratio(CR) is defined mathematically as :

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

2. Surface luminance is the average of 5 points across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 1., When  $I_{BL}=6.0\text{mA}$ .

3. The variation in surface luminance, The Panel total variation ( $\delta_{\text{WHITE}}$ ) is determined by measuring  $L_{ON}$  at each test position 1 through 13, and then dividing the maximum  $L_{ON}$  of 13 points luminance by minimum  $L_{ON}$  of 13 points luminance. For more information see FIG 2.

$$\delta_{\text{WHITE}} = \text{Maximum}(L_1, L_2, \dots L_{13}) / \text{Minimum}(L_1, L_2, \dots L_{13})$$

4. Response time is the time required for the display to transition from white to black(Rise Time,  $Tr_R$ ) and from black to white(Decay Time,  $Tr_D$ ). For additional information see FIG 3.

5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.

6. Gray scale specification

\*  $f_v=60\text{Hz}$

Gray Level	Luminance [%] (Typ)
L0	0.40
L7	0.80
L15	4.00
L23	11.7
L31	21.5

[ DETAIL DESCRIPTION OF SIDE MOUNTING SCREW ]

- \* Mounting Screw depth  
   depth Min. : "A" =2.0  
   depth Max : "B" =2.5
- \* Mounting screw Dim. : "C" = 3.1(typ.)
- \*Torque : 2 kgf.cm(Max)  
 (Measurement gauge : torque meter)

Notes : 1. Screw plated through the method of non-electrolytic nickel plating is preferred to reduce possibility that results in vertical and/or horizontal line defect due to the conductive particles from screw surface.

Product Specification

## 6. Reliability

Environment test condition

No.	Test Item	Conditions
1	High temperature storage test	Ta= 60°C, 240h
2	Low temperature storage test	Ta= -20°C, 240h
3	High temperature operation test	Ta= 50°C, 50%RH, 240h
4	Low temperature operation test	Ta= 0°C, 240h
5	Vibration test (non-operating)	Sine wave, 10 ~ 500 ~ 10Hz, 1.5G, 0.37oct/min 3 axis, 1hour/axis
6	Shock test (non-operating)	Half sine wave, 180G, 2ms one shock of each six faces(l.e. run 180G 2ms for all six faces)
7	Altitude operating storage / shipment	0 ~ 10,000 feet (3,048m) 24Hr 0 ~ 40,000 feet (12,192m) 24Hr

{ Result Evaluation Criteria }

There should be no change which might affect the practical display function when the display quality test is conducted under normal operating condition.

Mark	00001 ~ 99999	A0001 ~ A9999, - - - - , Z9999

##### b) Location of Lot Mark

Serial NO. is printed on the label. The label is attached to the backside of the LCD module.  
This is subject to change without prior notice.

#### 8-2. Packing Form

a) Package quantity in one box : 10 pcs

b) Box Size : 374mm × 329mm × 311mm

**Product Specification****9. PRECAUTIONS**

Please pay attention to the followings when you use this TFT LCD module.

**9-1. MOUNTING PRECAUTIONS**

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaked with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

**9-2. OPERATING PRECAUTIONS**

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :  
 $V = \pm 200\text{mV}$  (Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)  
And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.

**Product Specification****9-3. ELECTROSTATIC DISCHARGE CONTROL**

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

**9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE**

Strong light exposure causes degradation of polarizer and color filter.

**9-5. STORAGE**

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.  
It is recommended that they be stored in the container in which they were shipped.

**9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM**

- (1) The protection film is attached to the bezel with a small masking tape.  
When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
