Note: Because this module is operated by DE only mode, Hsync and Vsync input signals are ignored.

$$F_c = F_r \times T_v \times T_h$$

Please make sure the range of pixel clock has follow the below equation and F_c, F_r, T_v, T_h not allowed to get beyond the min or max spec.

INPUT SIGNAL TIMING DIAGRAM

Note (1) The input clock cycle-to-cycle jitter is defined as below figures. $Trcl = |T_1 - T|$

Note (2) Input Clock to data skew is defined as below figures.

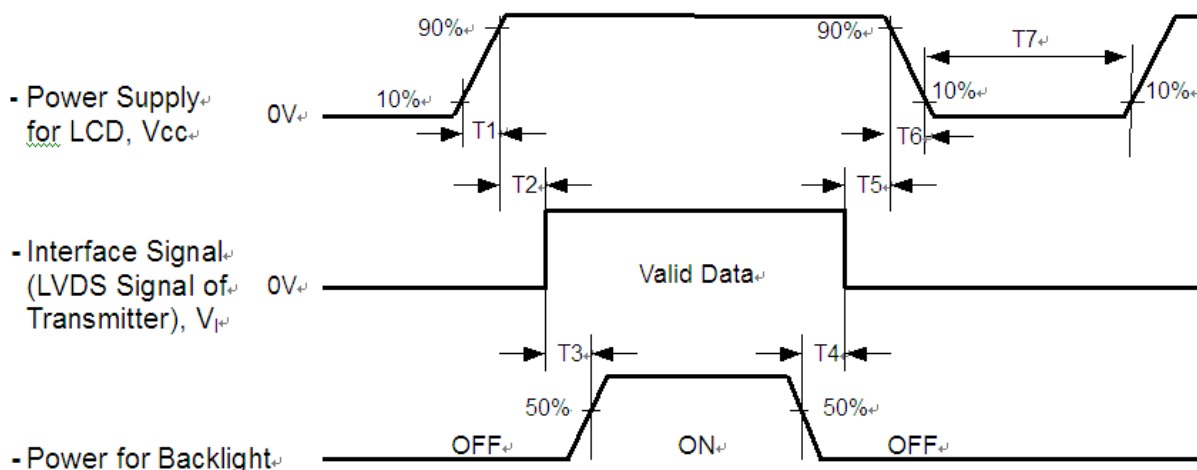

Note (3) The SSCG (Spread spectrum clock generator) is defined as below figures.

Note(4) The DCLK range at last line of V-blank should be set in 0 to Hdisplay/2

4.6 POWER ON/OFF SEQUENCE

The power sequence specifications are shown as the following table and diagram.

Timing Specifications:

Parameters	Values			Units
	Min	Typ.	Max	
T1	0.5	-	10	ms
T2	0	30	50	ms
T3	450	-	-	ms
T4	100	250	-	ms
T5	0	20	50	ms
T6	0.1	-	100	ms
T7	1000	-	-	ms

Note (1) The supply voltage of the external system for the module input should be the same as the definition of Vcc.

Note (2) When the backlight turns on before the LCD operation of the LCD turns off, the display may momentarily become abnormal screen.

Note (3) In case of VCC = off level, please keep the level of input signals on the low or keep a high impedance.

Note (4) T7 should be measured after the module has been fully discharged between power off and on period.

Note (5) Interface signal shall not be kept at high impedance when the power is on.

Note (6) CMI won't take any responsibility for the products which are damaged by the customers not following the Power Sequence.

Note (7) There might be slight electronic noise when LCD is turned off (even backlight unit is also off). To avoid this symptom, we suggest "Vcc falling timing" to follow "t6 spec".

The contrast ratio can be calculated by the following expression.

$$\text{Contrast Ratio (CR)} = L_{255} / L_0$$

L255: Luminance of gray level 255

L 0: Luminance of gray level 0

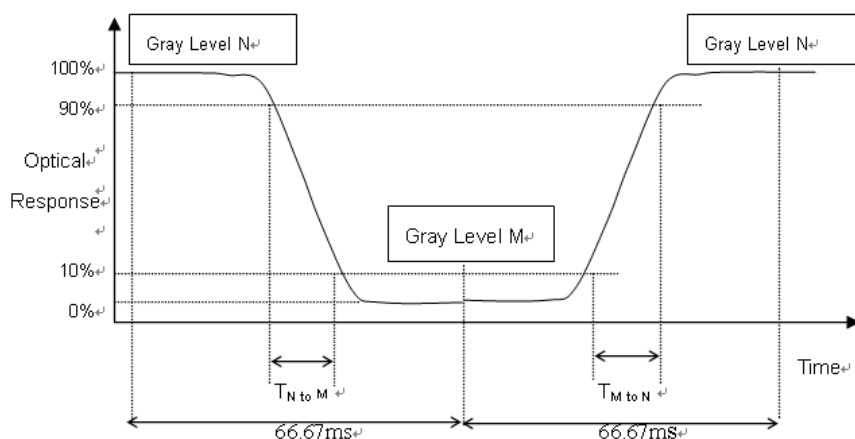

$$\text{CR} = \text{CR} (5)$$

CR (X) is corresponding to the Contrast Ratio of the point X at Figure in Note (6).

Note (3) Definition of Response Time :

-The T_R is the rising-time means the transition time from “Full-Black (gray 0)” to “Full-White (gray 255)” and the T_F is the falling-time means the transition time from “Full-White (gray 255)” to “Full-White (gray 0)” as the following figure.(Measured by TEKTRONIX TDS3054B).

-The T_{GTG} is the response time means the transition time from “Gray N” to “Gray M” ($N, M=0\sim 255$).

- T_{GTG_AVE} is the total average of the T_{GTG} data (Measured by INX GTG instrument)
- The gray (N,M) stands for the (0,31,63,~255) as the following table.
- If system uses ODC (Over Driving Circuit) function, T_{GTG_AVE} may be 5ms~10ms.
- * It depends on Overshoot rate.

Gray to Gray		Rising time								
		0	31	63	95	127	159	191	223	255
Falling time	0									
	31									
	63									
	95									
	127									
	159									
	191									
	223									
	255									

Note (4) Definition of Luminance of White (L_C):

Measure the luminance of gray level 255 at center point

$$L_C = L(5)$$

$L(x)$ is corresponding to the luminance of the point X at Figure in Note (6).

Note (5) Measurement Setup:

The LCD module should be stabilized at given temperature for 40 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting Backlight for 40 minutes in a windless room.

Note (6) Definition of White Variation (δW):

Measure the luminance of gray level 255 at 9 points

$$\delta W = \text{Minimum } [L(1) \sim L(9)] / \text{Maximum } [L(1) \sim L(9)]$$

10. PRECAUTIONS

10.1 ASSEMBLY AND HANDLING PRECAUTIONS

- (1) Do not apply rough force such as bending or twisting to the module during assembly.
- (2) To assemble or install module into user's system can be only in clean working areas. The dust and oil may cause electrical short or worsen the polarizer.
- (3) It's not permitted to have pressure or impulse on the module because the LCD panel and Backlight will be damaged.
- (4) Always follow the correct power sequence when LCD module is connecting and operating. This can prevent damage to the CMOS LSI chips during latch-up.
- (5) Do not pull the I/F connector in or out while the module is operating.
- (6) Do not disassemble the module.
- (7) Use a soft dry cloth without chemicals for cleaning, because the surface of polarizer is very soft and easily scratched.
- (8) It is dangerous that moisture come into or contacted the LCD module, because moisture may damage LCD module when it is operating.
- (9) High temperature or humidity may reduce the performance of module. Please store LCD module within the specified storage conditions.
- (10) When ambient temperature is lower than 10°C may reduce the display quality. For example, the response time will become slowly.

10.2 STORAGE PRECAUTIONS

- (1) Do not leave the module in high temperature, and high humidity for a long time. It is highly recommended to store the module with temperature from 0°C to 35°C and relative humidity of less than 70%
- (2) Do not store the TFT – LCD module in direct sunlight
- (3) The module should be stored in dark place. It is prohibited to apply sunlight or fluorescent light in storing

10.3 OPERATION PRECAUTIONS

- (1) The LCD product should be operated under normal condition.
Normal condition is defined as below :
Temperature : 20±15°C
Humidity: 65±20%
Display pattern : continually changing pattern(Not stationary)
- (2) If the product will be used in extreme conditions such as high temperature, high humidity, high altitude, display pattern or operation time etc... It is strongly recommended to contact Innolux for application engineering advice. Otherwise, its reliability and function may not be guaranteed.

10.4 SAFETY PRECAUTIONS

- (1) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, skin or clothes, it has to be washed away thoroughly with soap.
- (2) After the module's end of life, it is not harmful in case of normal operation and storage.

10.5 SAFETY STANDARDS

The LCD module should be certified with safety regulations as follows:

- (1) UL60950-1 or updated standard.
- (2) IEC60950-1 or updated standard.

10.6 OTHER

When fixed patterns are displayed for a long time, remnant image is likely to occur.

Appendix. SYSTEM COVER DESIGN NOTICE

1.	Set Chassis and MNT Module touching Mode
 <p>The diagram illustrates three different methods for connecting the MNT Module to the Chassis:</p> <ul style="list-style-type: none"> Top (Red X): MNT Module connected to Chassis using a spring. Middle (Triangle): MNT Module connected to Chassis using Flat sheetmetal. Bottom (Blue circle): MNT Module connected to Chassis using EMI Shielding Gasket (Tape/Sponge). 	
Definition	<p>a) To prevent from abnormal display & white spot after Mechanical test, it is not recommended to used spring type chassis.</p> <p>b) We suggest the contact mode between Chassis and Module rear cover is Tape/Sponge, sencond is Flat sheetmetal type chassis.</p>
2	Tape/sponge design on system inner surface

Definition	<p>a) To prevent from abnormal display & white spot after Mechanical test, We suggest using Tape/Sponge as medium between chassis and Module rear cover could reduce the occurrence of white spot.</p> <p>b) When using the Tape/Sponge, suggest it be lay over between set chassis and module rear cover. it is not recommended to add tape/sponge in separate location. Since each tape/sponge may act as pressure concentration location.</p>
3	System inner surface examination

	 <p>The top view shows a purple PCB with a red hatched area at the bottom left corner. Below it is a cyan bar labeled "MNT Module". The cross-section shows a cyan "System cover inner surface" with a green "PCB" and an orange "Chassis" on top. Labels include "Burr", "Step", and "System cover inner surface". A red hatched area on the PCB is labeled "禁佈區" (No layout area).</p>
<p>Definition</p>	<p>a). Burr at logo edge, step, protrusion or PCB board will easily cause white spot.</p> <p>b). Keeping flat surface underneath module is recommended.</p> <p>c). The area () on Module PCBA and Light bar connector should keep at least 1mm gap to any structure with System cover inner surface.</p>
<p>4</p>	<p>The overlapping part on System's Chassis and electric wire needs gap structure.</p>
 <p>The A-A Section shows a cross-section of the "Chassis" (orange) and "Module" (grey) with "FFC electric" (black) connecting them. The B-B Section shows a cross-section of the "Chassis" (orange) and "Module" (grey) with "electric wire" (red and blue) connecting them.</p>	 <p>The top view shows the "Chassis" (orange) and "Module" (grey) with "wire" (red and blue) connecting them. A "Light bar connector" is shown at the bottom left, and an "LVDS Connector" is shown at the bottom right. A red hatched area is labeled "A-A".</p>
<p>Definition</p>	<p>The overlapping part on System's Chassis and electric wire (FPC·FFC and wire) needs gap structure to avoid display of white spot by pressing overlapping part cause interference.</p>

5	System cover's ventilation outlet structure
	
Definition	To prevent from abnormal display of light leakage, We suggest to set ventilation outlet structure on side of Module Light bar in system cover inner surface.
