The block diagram illustrates the system architecture for the LCD module. On the left, three input lines are shown: 'LVDS odd input', 'LVDS even input', and '+5V'. These inputs connect to a vertical 'CN1' (connector) block. From 'CN1', three lines branch out: two to the 'LVDS Rx & Timing Controller' block and one to the 'Power Circuit Block'. The 'LVDS Rx & Timing Controller' block is connected to the 'Row Driver' block, which in turn drives the 'TFT-LCD' display. The 'TFT-LCD' is specified as '1280xRGBx1024pixels'. The 'Power Circuit Block' receives '+5V' and provides power to the 'LVDS Rx & Timing Controller' and the 'Column Driver' block. The 'Column Driver' block drives the 'TFT-LCD' display. At the bottom, 'DC POWER' is input to an 'INVERTER' block, which outputs '4 CCFL' (Cold Cathode Fluorescent Lamp) power to the backlight of the 'TFT-LCD'.

5.3 Driving Backlight

The backlight system is an edge – lighting type with a single CCFL (Cold Cathode Fluorescent Lamp). The characteristics of a single lamp are shown in the following tables.

				1460 (0)		

Note 5-1: Lamp current is measured with a high frequency current meter as show below.

Note 5-2: $W = I_L \times V_L \times 4$

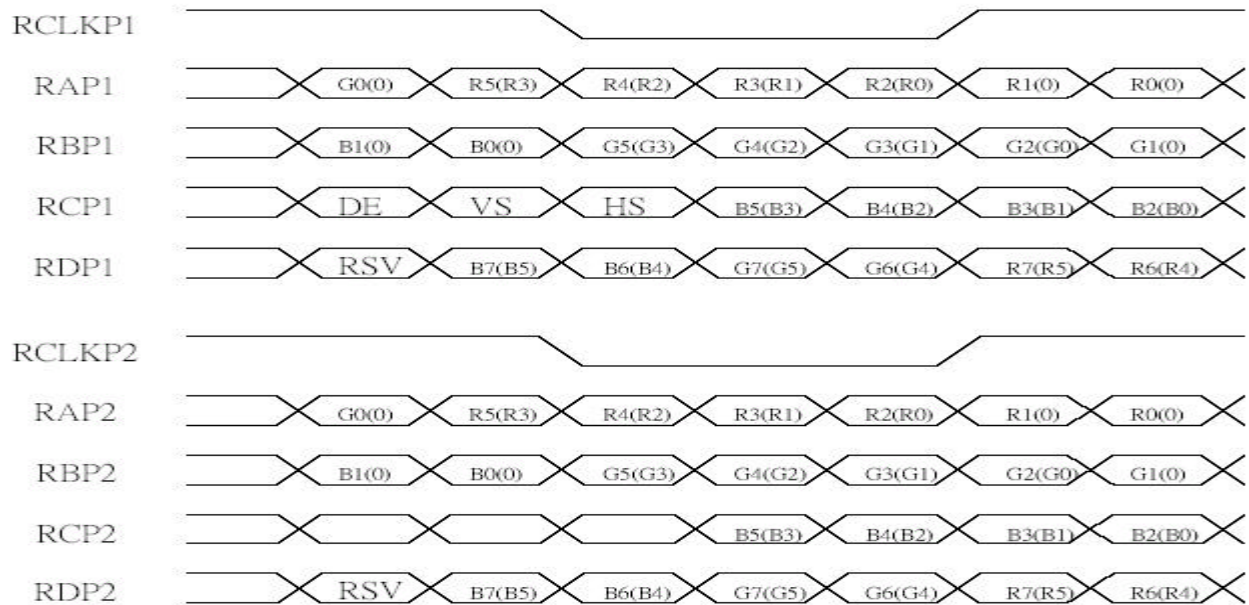

Note 5-3: Lamp frequency may produce interference with horizontal synchronous frequency and this may cause line flow on the display. Therefore lamp frequency shall be detached from the horizontal synchronous frequency and its harmonics as far as possible in order to avoid interference.

Note 5-4: Brightness is decreased to the 50% of the initial value.

Note 5-5: Above this value should be applied to the lamp for more than 1 second to startup, otherwise the lamp may be not to turn on.

9. HANDLING CAUTIONS

- 9.1 Module assembly working environment should in the clean room.
- 9.2 The polarizer is easy damaged, handle it carefully and do not press or scratch the surface by sharp material.
- 9.3 Panel has polarizer protective film in the surface please remove the protection film of polarizer slowly to prevent the electrostatic discharge.
- 9.4 It is not permitted the pressure or impulse on the module, it may cause LCD panel or Backlight damaged.
