## Specification of TFT-LCD module

<b>NA19020-C961</b>
---------------------

Approval
<p>Date :</p> <p>By :</p>

This Product is designed, developed and manufactured as contemplated for general use, including without limitation, general office use, personal use, household use, and ordinary industrial use, but is not designed, developed and manufactured as contemplated for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could lead directly to death, personal injury, severe physical damage or other loss (hereinafter "High Safety Required Use"), including without limitation, nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system. Fujitsu shall not be liable against the Customer and/or any third party for any claims or damages arising in connection with the High Safety Required Use of the Product without permission.

Specification No. : Tech Bes LCD-00199

## 1. APPLICATION

This specification is applied to the 19-inch SXGA supported TFT-LCD module.

## 2. PRODUCT NAME AND MODEL NUMBER

2-1 Product Name : LCD Module

2-2 Model Number : NA19020-C961

## 3. OVERVIEW

This LCD module has a TFT active matrix type liquid crystal panel 1280x1024 pixels, and diagonal size of 48cm(19-inch). This LCD has a LVDS dual interface and can display 16,777,216 colors.

The power supply of this LCD module is +5V DC voltage.

This module has the characteristics for applying TCO'99.

## 4. CONFIGURATION

This LCD module consists of a color TFT-LCD panel that is mounted with TFT driver ICs and a cold-cathode fluorescent tube back-light.

The inverter for the back-light is not included.

Figure 4-1 shows a block diagram of this LCD module.

**Note 6) Definition of Optimum Viewing Angle**

**Figure 9-6 Definition of Viewing Angle**

**Note 7) Definition of Brightness Uniformity**

Brightness uniformity is defined by the following formula.

Brightness (I1 ~ I9) are measured at the following 9 points ( ~ ) on the display area that is shown in Figure 9-7.

$$\text{Brightness Uniformity ( L )} = \frac{|\text{Min. In }|}{|\text{Max. In }|} \times 100 (\%) , n = 1 \text{ to } 9$$

Note) Each measurement point ( ~ ) defines the center spot of view of Brightness Meter.  
The tolerance of measurement position is ± 3mm.

**Figure 9-7 Measurement Points**

	Blue	255	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	1	1	1	1	1	1	1	1

Note.1) Definition of gray scale:Color (n)..."n" indicates gray scale level.

Larger number means brighter level.

Note.2) Data; 1:High, 0:Low

Note 3) Color data consist of 8 bit red, green and blue data of odd and even number pixel data.  
Total data number is 48 signals. This module is able to display 16,777,216 colors because each red, green and blue data is controlled independently.

#### 10-4 Input Signal Timing

Table 10-4 and Figure 10-1 shows the Input Signal Timing at LVDS transmitter.

Table 10-4 Timing Characteristics

(Ta=0~50°C, Vcc=5±0.25V)

Item		Symbol	Min.	Typ.	Max.	Unit	Remark
DCLK signal (Clock)	Period	Tc	16.7	18.5	25.0	ns	
	Frequency	1/Tc	40	54	60	MHz	
	Duty	Tch/Tc	45	50	55	%	
	High time	TclkH	5.0	—	—	ns	
	Low time	TclkL	5.0	—	—	ns	
DCLK-Data Timing	Setup time	Tset	3	—	—	ns	
	Hold time	Thold	5	—	—	ns	
ENAB signal	Horizontal Period	Th	5500/Tc+450	844	887 *1	DCLK	
	Hor. Period (1)	Th	14.0	15.6	—	μs	*4
	Hor. Period (2)	Th	10.6	15.6	—	μs	*4
	Hor. Display period	Thd	640	640	640	DCLK	*2
	Vertical Period	Tv	1028 *1	1066	1088 *1	Th	16.67ms
	Ver. Frequency	1/Tv	50	60	69	Hz	
	Ver. Display period	Tvd	1024	1024	1024	Th	*2
Data-ENAB timing		Tdn	—	0	—	DCLK	*3

\*1) •horizontal display position is specified by the rise of ENAB.

The data latched at falling edge of DCLK after rise of ENAB is displayed at the left edge of the display area.

•Vertical display position is specified by the rise of ENAB after low level continuation over 2048 DCLK.

The data latched at the rise of ENAB is displayed at the top line of the display area.

\*2) •If the “High” level period of ENAB is less than 640 DCLK or the number of ENAB in a frame period (Tv) is less than 1024, black color is displayed at the rest of the display area.

\*3) •If ENAB does not synchronize with the effective display data, the display position does not fit to the display area.

\*4) •Hor. Period (2) shows the operating range where internal circuit can work correctly.

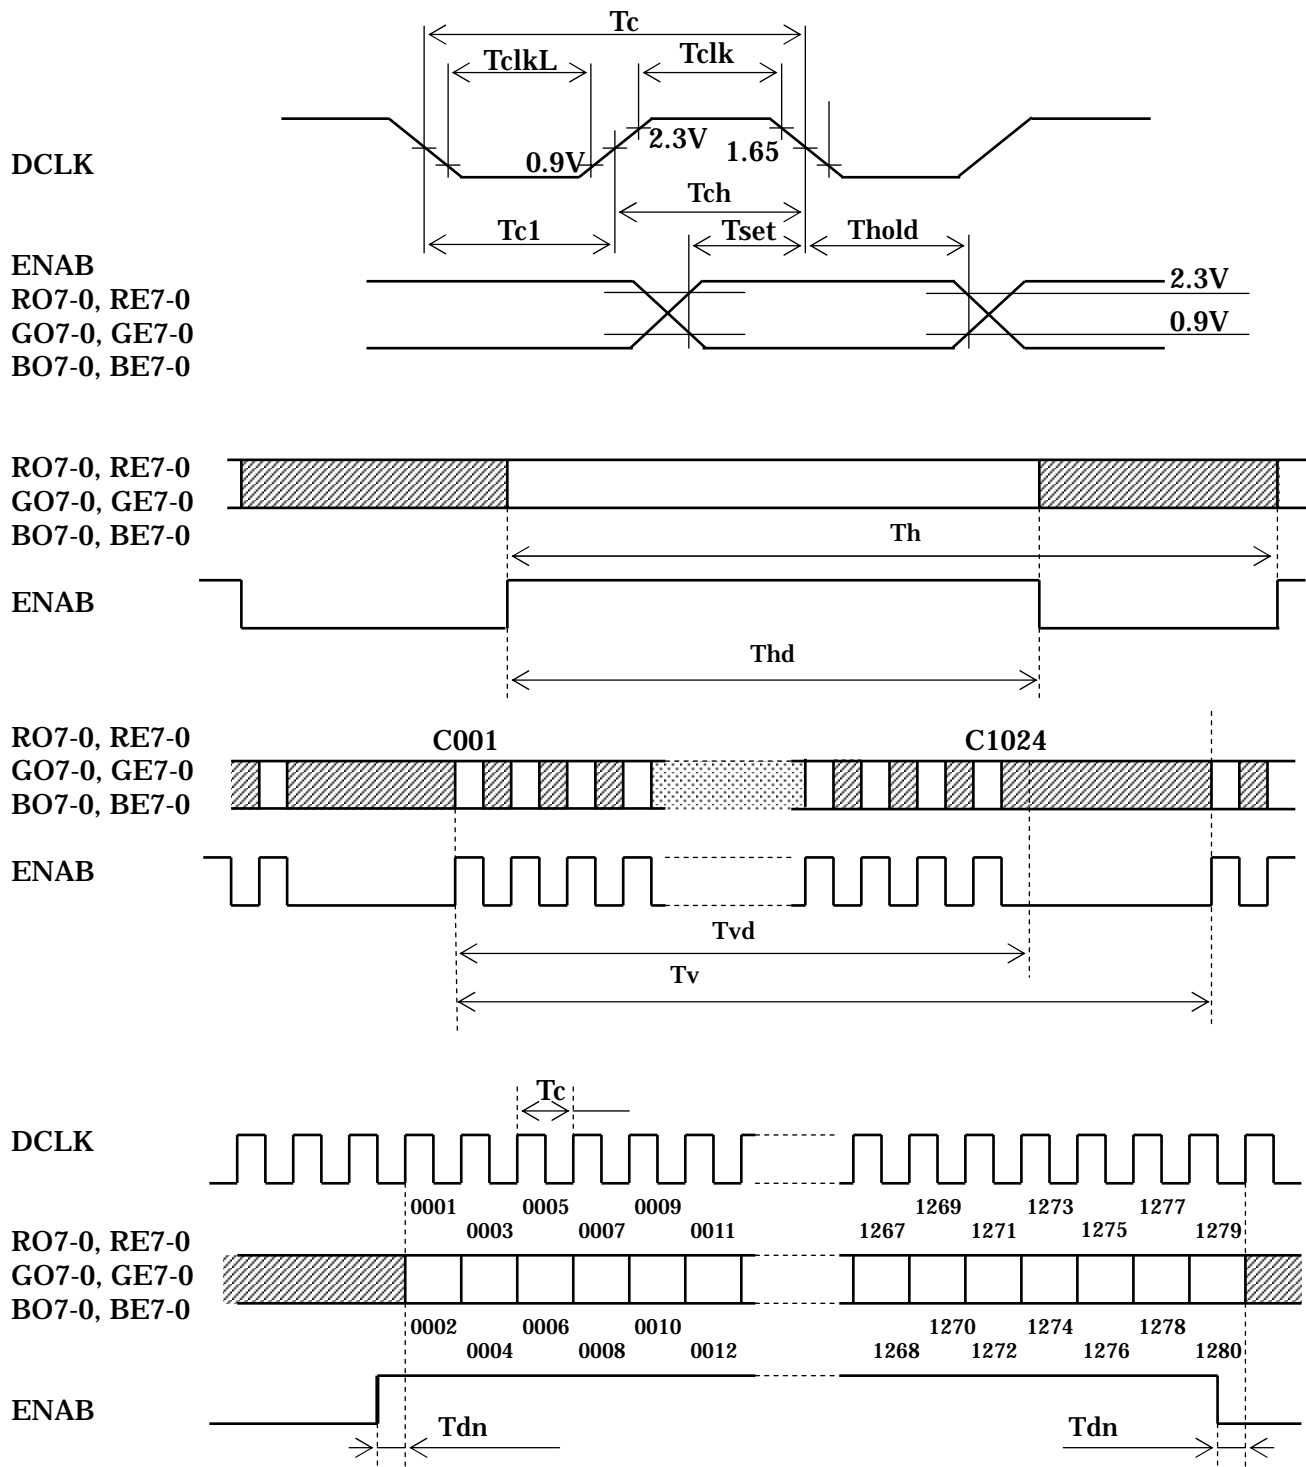

·When ENAB signal is out of Hor. Period (1), the display quality may deteriorate.

### 10-5 Correspondence between Data and Display Position

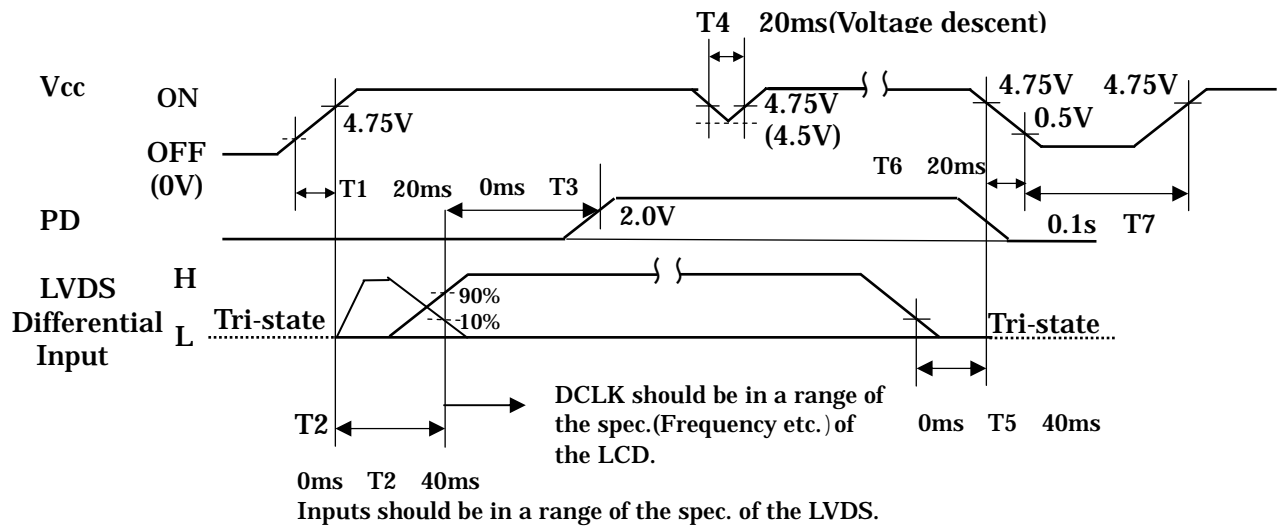

Figure 10-2 shows the Correspondence between Data and Display Position.

	S0001	S0002	S0003	S0004	S0005	S0006	S0007	-----	S3839	S3840	
C001	RO 0001	GO 0001	BO 0001	RE 0002	GE 0002	BE 0002	RO 0003	GO 0003		GE 1280	BE 1280

Figure 10-2 Correspondence Data and Display Position

### 10-6 Power Supply Sequence

The sequence of input signals and On/Off of the power supply of this LCD module should be in the specification shown in Figure 10-3 to prevent latch-up of the driver ICs and DC driving of the LCD panel.

\*Note : PD input can be set open, if it is not used.

Figure 10-3 Power Supply Sequence

## 11. BACK-LIGHT SPECIFICATIONS

### 11-1 Pin configuration for Back-light

Table 11-1 shows the description and Pin assignment of the connectors (CN-A to D) for the Back-light of this LCD module.

**Table 11-1 Pin Assignment of CN-A to CN-D**

Pin	Signal				Function	Cable color
	CN-A	CN-B	CN-C	CN-D		
1	V <sub>L1</sub>	V <sub>L2</sub>	V <sub>L3</sub>	V <sub>L4</sub>	Power supply	Pink
2	—	—	—	—	—	—
3	GND	GND	GND	GND	Ground	White or Blue

Connector : Housing : BHR-03VS-1  
 Contact : SBH-001T-P0.5  
 User's Connector : Post with base: SM02(8.0)B-BHS-1-TB  
 Supplier : Japan Solderless Terminal Trading Company LTD. (J.S.T.)

### 11-2 Life

The life of the back-light is a minimum of 50,000 hours at the following conditions.

#### (1) Working conditions

Ambient temperature: 25 ± 5  
 Tube current (I<sub>L</sub>) : (7mA or less)

#### (2) Definition of life

Brightness becomes 50% or less than the minimum brightness value shown in Table 9-1.  
 The lamp cannot be lit by the minimum value of the breakdown voltage(1760Vrms) shown in Table 8-1.  
 Flashing.

### 11-3 Lamp assembly set (for replacement)

Lamp assembly set(with charge)is prepared for replacing old lamp to new one.  
 This set consists of a upper lamp assembly and a lower lamp assembly.

Type number : FLCL-20  
 Drawing No. : NA19020-5906  
 Minimum order qty. unit : 20 pcs.

## 12-2 Dot defects (Bright spots, Dark spots)

### 12-2-1 Zone

- Inside display dot area (376.32×301.056mm)
- Display dot area means active area.
- One pixel consists of 3 dots (red, green and blue).
- Foreign particle and scratch unharmed to display image, such as the foreign particle under polarizer film but outside of the display area and scratch on metal bezel, backlight module or polarizer film out of the display area, etc., are not counted.

### 12-2-2 Bright spots

#### (1) Bright spots by the defect of TFT.

- Visible under bias of 2% ND filter ..... High bright spot R•G
- Visible under 5% but invisible under 2% ND filter ..... Low bright spot R•G•B
- Invisible under bias of 5% ND filter ..... Not counted

#### (2) Bright spots by the light passing through tears, breaks, etc in color filter.

- Exceed size of a half dot ..... High bright spot
- A half dot or less ..... Not counted

#### (3) Bright spots by the light passing through tears, breaks, etc in chromium mask.

- Exceed 50μm ..... High bright spot
- 50μm or less ..... Not counted

### 12-2-3 Test condition

- Inspector must observe the LCD screen from the normal direction under the illumination by a single 20W fluorescent lamp. The distance between the LCD screen and the inspector should be a height of 50cm above the worktable.  
The vertical illuminance is 300 to 600lux (reference value).
- Bright spot should be counted under entire black screen.
- Dark spot should be counted under entire white screen.
- Input signal timing should be typical value.

(Note1) Please do not mistake a single bright spot for a bright spot connection due to Cs(supplemental capacitance) line at the center of each dot.

(Note2) If a pixel is dark partially, it connects into the number of dark spots in accordance with following rule.

- (a)  $A < 1/3$  : Not count. Only one of 4 dark connection is allowed.
  - (b)  $1/3 \leq A < 2/3$  : Considered as 0.5 dot.
  - (c)  $2/3 \leq A$  : Considered as 1 dot.
- (A=Dark spot size/dot size)

### 13. ENVIRONMENTAL SPECIFICATIONS

Table 12-1 shows the environmental specifications.

**Table 12-1 Environmental specifications**

Item	Condition		Remark
Temperature	Operation	0 ~ 55	Temperature on surface of LCD panel (display area.)
	Storage	-20~60°C	
Humidity	Operation	20~85%RH	Maximum wet-bulb temperature should not exceed 29°C. No condensation.
	Storage	5~85%RH	
Vibration	Non-operation	10~500Hz, 1octave/ 20minute, 19.6m/s <sup>2</sup> (2G), 1.5mm max, 1hour each X, Y and Z directions.	For single module without package.
Shock *1	Non-operation	294m/s <sup>2</sup> (30G), 6ms, 1time each ±X, ±Y and ±Z directions.	

\*1) When LCD module is mounted with side mount holes, the shock condition is 196m/s<sup>2</sup>(20G).

NOTE: Table 13-2 and Figure 13-1 show the shock resistance standard when module is packaged.

**Table 12-2 Shock resistance standard when module is packaged**

Dropping location	Dropping height	Count
A~J	60cm	1 time

## 14. INDICATIONS

This module has the following indications.

- (1) Product name : LCD unit
- (2) Model Number : NA19020-C961
- (3) Manufacturing Number : 3 5 0 0 0 0 1

Serial number  
(To be reset every month on 1st.)

Manufacturing month  
(Oct. = X, Nov. =Y, Dec. =Z)

Last digit of manufacturing year.

- (4) Manufacturer Country Name :
- (5) Disposal method of cold-cathode tubes. (See Figure 13-2)
- (6) Caution when changing cold-cathode tubes. (See Figure 13-3)

Figure 13-1 Product Label (Example)

Figure 13-2

Figure 13-3

## 15. PACKAGING

### 15-1 Packing specifications

- (1) 5 LCD modules/1package.
- (2) Weight:approximately 16kg/1package.
- (3) Outline dimensions: 534mm (W)x329mm (D)x 480mm (H)

### 15-2 Packing method

Figure 15-2 shows the packing method.

## 16. PRECAUTIONS

Adhere to the following precautions to use this LCD module properly.

### (1) Fail safe design

LCD module has an inherent chance of failure. Customers must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

### (2) Handling of LCD panel

#### **Do not apply any strong mechanical shock to the LCD panel.**

Since the LCD panel is made of glass, excessive shock may damage the panel or cause a malfunction.

#### **Do not press hard on the LCD panel surface. (Max: 2kg/cm<sup>2</sup>)**

In the LCD panel, the gap between two glass plates is kept perfectly even to maintain display properties and reliability. The hard pressure on the LCD panel may cause the following problems. If the pressure is over 2kg/cm<sup>2</sup>, the problem doesn't return to normal condition.

Ununiformity of color

Disorder of orientation of liquid crystal

Problem returns to normal condition after a while. Problem returns to normal condition by turning the power off and turning on again.

However these operations should be avoided to insure reliability.

#### **Do not scratch the polarizer film on the LCD panel surface.**

- Do not press or rub the display surface with a hard tool, tweezers, etc.
- For handling, use cotton or conductive gloves so that the display surface is not soiled.
- If dust or dirt soils the display surface, clean it as follows with a soft cloth (deerskin, etc.)

[Dust] Wipe off with a soft cloth. (do not rub.)

[Dirt] Apply clear water to a soft cloth and squeeze hard out of water drops, then lightly wipe off the specified parts. Only if the dirt is hardly wiped off, use isopropyl alcohol or ethanol.

Be careful not to splash the water or the solvents on the edge of polarizer and in the LCD unit.

The polarizer possibly exfoliates due to the solvent and water penetrated between the polarizer and the LCD panel.

Do not use unspecified solvent such as ketone (acetone, etc.) and aromatics (xylene, toluene, etc.)

- **Do not allow oil to adhere to the module since excessive oil is hard to clean.**

**This may make some parts of the LCD module distorted and the quality of display may deteriorate.**

**Disassembly or remodeling of the LCD module may result in malfunctions or deterioration of the display quality and reliability.**

If the LCD module is operated when condensation is on the terminals of the LCD panel, the terminals cause electrochemical reaction, and may reach disconnection. Condensation easily occurs especially when the module is moved from cold environment to warm environment.

DATE		DOCUMENT CONTROL SECTION		<div><p>(1) Precautions in regard to operating the LCD module</p><p><b>Adhere to the specified power supply sequence.</b> If not followed, the CMOS-IC may cause a latch-up, or DC voltage may be applied to the liquid crystal, which cause a failure or serious deterioration in display quality.</p><p><b>Do not operate the LCD module when condensation occurs.</b> If the LCD module is operated when condensation is on the terminals of the LCD panel, the terminals cause electrochemical reaction, and may reach disconnection. Condensation easily occurs especially when the module is moved from cold environment to warm environment.</p></div>

**The following troubles occur when the LCD module is not used under recommended temperature.**

- Operation under high temperature(>50 ): Display colors shift to blue.
- Storage under high temperature(>60 ): The polarizer film deteriorates and contrast decreases.
- Operation under low temperature(< 0 ): The response speed decreases considerably.
- Storage under low temperature(<-20 ): The liquid crystal may solidify and become damaged.

**Be sure to input the control signals at the correct timing.**

If control signals (DCLK, ENAB) are not input, or if the timing is out of the specified timing, DC voltage may be applied to the liquid crystal and, as a result, cause image sticking or deterioration of contrast.

#### **(5) Precautions in regards of designing module mounting**

**Excessive force should not be applied to the screen or the rear side of the LCD module.**

Excessive pressure on the screen caused by the installation of the LCD module may deteriorate display quality and reliability.

Brightness uniformity and the reliability of CCFL may decrease if the pressure is applied to the backlight module.

**Avoid twisting and bending the LCD module.**

Excessive twist and bend may damage display quality and reliability.

**Avoid extending the power cable between the LCD module and inverter.**

This may cause the backlight to flicker or not to light.

**Keep the backlight cable apart from the metal enclosure of the LCD module.**

When frequency current for backlight driving leak to the metal enclosure, the desired brightness may not be assured.

**When mounting LCD module with M3 screws (x4), tighten the screws with torque below.**

**User hole : 50N(5kgf) , Side mount hole : 30N(3kgf)**

(6) Storage method

**Do not store the LCD module in an atmosphere of organic solvent or corrosive gas.**  
In an organic solvent atmosphere, the polarizer film discolors and display quality deteriorates.  
In a corrosive gas environment, various parts of the module may corrode or deteriorate.

**Store the LCD module in a Fujitsu package.**  
At storing, Fujitsu packages can be stacked up to 3 boxes.  
The LCD module is in an anti-static bag. Keep the module in that status.

**The LCD module is recommended to be stored in humidity controlled, cool and dark locations.**  
Recommended storage environment  
·Place : Dark (avoid direct sunlight)  
·Temperature : 10 ~ 35  
·Humidity : 50 ~ 60%RH

Note) If the module is left in an environment of 60 and above for a long period of time, optical characteristics may deteriorate.

(7) Disposal Method

**LCD module**  
The components of this LCD module can be grouped into metal, resin, glass and so on. As the backlight contains CCFL which includes mercury, it must be disposed according to the local ordinance or regulations.

**Package**  
All the packages are made of recyclable papers except the anti-ESD bag.

(8) Others

**If the LCD panel is damaged, do not inhale and do not swallow the liquid crystal.**  
If the liquid crystal adhere to the body or cloths, wash it off with soap immediately.  
Follow regular precautions for electronic components.

**Flux residue on the printed circuit board is harmless to the quality and reliability of LCD module.**  
Fujitsu has adopted non-wash technology on module assembly process.
