#### 1 GENERAL DESCRIPTION

#### 1.1 OVERVIEW

N141I3 - L02 is a 14.1" TFT Liquid Crystal Display module with single CCFL Backlight unit and 30 pins LVDS interface. This module supports 1280 x 800 WXGA mode and can display 262,144 colors. The optimum viewing angle is at 6 o'clock direction. The inverter module for backlight is not built in.

#### 1.2 FEATURES

- Thin and Light Weight
- WXGA (1280 x 800 pixels) resolution
- DE only mode
- 3.3V LVDS (Low Voltage Differential Signaling) interface with 1 pixel/clock
- RoHS Compliance

#### 1.3 APPLICATION

- TFT LCD Notebook

#### 1.4 GENERAL SPECIFICATIONS

| Item               | Specification          | Unit  | Note |

#### 2 ABSOLUTE MAXIMUM RATINGS

#### 2.1 ABSOLUTE RATINGS OF ENVIRONMENT

| Item                          | Symbol           | Va   | Unit  | Note  |          |  |
|-------------------------------|------------------|------|-------|-------|----------|--|
| item                          | Symbol           | Min. | Max.  | Offic | NOLE     |  |
| Storage Temperature           | T <sub>ST</sub>  | -20  | +60   | ٥C    | (1)      |  |
| Operating Ambient Temperature | T <sub>OP</sub>  | 0    | +50   | ٥C    | (1), (2) |  |
| Shock (Non-Operating)         | S <sub>NOP</sub> | -    | 220/2 | G     | (3), (5) |  |
| Vibration (Non-Operating)     | $V_{NOP}$        | -    | 1.5   | G     | (4), (5) |  |

Note (1) Temperature and relative humidity range is shown in the figure below.

- (a) 90 %RH Max. (Ta 40 °C).
- (b) Wet-bulb temperature should be 39 °C Max. (Ta > 40 °C).
- (c) No condensation.
- Note (2) The ambient temperature means the temperature of panel surface.
- Note (3) 1 time for  $\pm$  X,  $\pm$  Y,  $\pm$  Z. for Condition(220G / 2ms) is half Sine Wave,.

Note (4) 10 ~ 500 Hz, 30 min / Cycle, 1 cycles for each X, Y, Z axis. The fixing condition is shown as below:

Note (5) At testing Vibration and Shock, the fixture in holding the module has to be hard and rigid enough so that the module would not be twisted or bent by the fixture.

### Relative Humidity (%RH)

**Approval**

Note (1) The module should be always operated within above ranges.

#### Note (2) Measurement Conditions:

**Approval** 

Note (3) The specified power supply current is under the conditions at Vcc = 3.3 V,  $Ta = 25 \pm 2 \, ^{\circ}\text{C}$ ,  $f_v = 60 \, \text{Hz}$ , whereas a power dissipation check pattern below is displayed.

Active Area

b. Black Pattern

Active Area

Note (4) The specified power are the sum of LCD panel electronics input power and the inverter input power. Test conditions are as follows.

- (a) Vcc = 3.3 V,  $Ta = 25 \pm 2 \, ^{\circ}\text{C}$ ,  $f_v = 60 \text{ Hz}$ ,
- (b) The pattern used is a black and white 32 x 36 checkerboard, slide #100 from the VESA file "Flat Panel Display Monitor Setup Patterns", FPDMSU.ppt.
- (c) Luminance: 60 nits.

Note (5) The parameters of LVDS signals are defined as the following figures.

Single Ended

Differential

**Approval**

Note (1) Lamp current is measured by utilizing a high frequency current meter as shown below:

- Note (2) The voltage that must be larger than Vs should be applied to the lamp for more than 1 second after startup. Otherwise the lamp may not be turned on.
- Note (3) The lamp frequency may produce interference with horizontal synchronous frequency from the display, and this may cause line flow on the display. In order to avoid interference, the lamp frequency should be detached from the horizontal synchronous frequency and its harmonics as far as possible.
- Note (4)  $P_L = I_L \times V_L$
- Note (5) The lifetime of lamp can be defined as the time in which it continues to operate under the condition  $Ta = 25 \pm 2$  °C and  $I_L = 6$  mArms until one of the following events occurs:
  - (a) When the brightness becomes or lower than 50% of its original value.
  - (b) When the effective ignition length becomes or lower than 80% of its original value. (Effective ignition length is defined as an area that has less than 70% brightness compared to the brightness in the center point.)
- Note (6) The waveform of the voltage output of inverter must be area-symmetric and the design of the inverter must have specifications for the modularized lamp. The performance of the Backlight, such as lifetime or brightness, is greatly influenced by the characteristics of the DC-AC inverter for the lamp. All the parameters of an inverter should be carefully designed to avoid producing too much current leakage from high voltage output of the inverter. When designing or ordering the inverter please make sure that a poor lighting caused by the mismatch of the Backlight and the inverter (miss-lighting, flicker, etc.) never occurs. If the above situation is confirmed, the module should be operated in the same manners when it is installed in your instrument.

The output of the inverter must have symmetrical (negative and positive) voltage waveform and symmetrical current waveform.(Unsymmetrical ratio is less than 10%) Please do not use the inverter

**Approval** 

which has unsymmetrical voltage and unsymmetrical current and spike wave. Lamp frequency may produce interface with horizontal synchronous frequency and as a result this may cause beat on the display. Therefore lamp frequency shall be as away possible from the horizontal synchronous frequency and from its harmonics in order to prevent interference.

Requirements for a system inverter design, which is intended to have a better display performance, a better power efficiency and a more reliable lamp. It shall help increase the lamp lifetime and reduce its leakage current.

- a. The asymmetry rate of the inverter waveform should be 10% below.
- b. The distortion rate of the waveform should be within  $2 \pm 10\%$ .
- c. The ideal sine wave form shall be symmetric in positive and negative polarities.

\* Asymmetry rate:

$$|I_p - I_{-p}| / I_{rms} * 100\%$$

\* Distortion rate

$$I_p$$
 (or  $I_{-p}$ ) /  $I_{rms}$

#### 5.4 COLOR DATA INPUT ASSIGNMENT

The brightness of each primary color (red, green and blue) is based on the 6-bit gray scale data input for the color. The higher the binary input, the brighter the color. The table below provides the assignment of color versus data input.

| -      |               | Data Signal |    |    |    |       |    |    |    |      |    |    |   |    |    |    |    |    |    |
|--------|---------------|-------------|----|----|----|-------|----|----|----|------|----|----|---|----|----|----|----|----|----|
| Color  |               | Red         |    |    |    | Green |    |    |    | Blue |    |    |   |    |    |    |    |    |    |
|        |               | R5          | R4 | R3 | R2 | R1    | R0 | G5 | Ğ4 | G3   | G2 | G1 | G | B5 | B4 | B3 | B2 | B1 | B0 |

#### 6 INTERFACE TIMING

#### 6.1 INPUT SIGNAL TIMING SPECIFICATIONS

The specifications of input signal timing are as the following table and timing diagram.

| Signal | Item                       | Symbol | Min. | Тур. | Max. | Unit | Note |
|--------|----------------------------|--------|------|------|------|------|------|
| DCLK   | Frequency                  | 1/Tc   | 50   | 71   | 80   | MHz  | -    |
|        | Vertical Total Time        | TV     | 810  | 823  | 1028 | TH   | -    |
| DE     | Vertical Addressing Time   | TVD    | 800  | 800  | 800  | TH   | -    |
| DE     | Horizontal Total Time      | TH     | 1360 | 1440 | 1800 | Tc   | -    |
|        | Horizontal Addressing Time | THD    | 1280 | 1280 | 1280 | Tc   | -    |

#### Timing Specifications:

0.5< t1 10 msec

0 < t2 50 msec

0 < t3 50 msec

t4 500 msec

t5 200 msec

t6 200 msec

- Note (1) Please avoid floating state of interface signal at invalid period.
- Note (2) When the interface signal is invalid, be sure to pull down the power supply of LCD Vcc to 0 V.
- Note (3) The Backlight inverter power must be turned on after the power supply for the logic and the interface signal is valid. The Backlight inverter power must be turned off before the power supply for the logic and the interface signal is invalid.
- Note (4) Sometimes some slight noise shows when LCD is turned off (even backlight is already off). To avoid this phenomenon, we suggest that the Vcc falling time is better to follow 5 to 7 300 ms.

**Approval** 

#### Note (1) Definition of Viewing Angle ( $\theta x$ , $\theta y$ ):

Note (2) Definition of Contrast Ratio (CR):

The contrast ratio can be calculated by the following expression.

Contrast Ratio (CR) = L63 / L0

L63: Luminance of gray level 63

L 0: Luminance of gray level 0

CR = CR (5)

CR (X) is corresponding to the Contrast Ratio of the point X at Figure in Note (6).

#### Note (3) Definition of Response Time (T<sub>R</sub>, T<sub>F</sub>):

**Approval** 

Note (4) Definition of Average Luminance of White (LAVE):

Measure the luminance of gray level 63 at 5 points

$$L_{AVE} = [L(1) + L(2) + L(3) + L(4) + L(5)] / 5$$

L (x) is corresponding to the luminance of the point X at Figure in Note (6)

#### Note (5) Measurement Setup:

The LCD module should be stabilized at given temperature for 20 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting Backlight for 20 minutes in a windless room.

**Approval** 

Note (6) Definition of White Variation ( $\delta W$ ):

Measure the luminance of gray level 63 at 5 points

 $\delta W = Maximum [L (1), L (2), L (3), L (4), L (5)] / Minimum [L (1), L (2), L (3), L (4), L (5)]$ 

**Approval** 

#### 8 PRECAUTIONS

#### 8.1 HANDLING PRECAUTIONS

- (1) The module should be assembled into the system firmly by using every mounting hole. Be careful not to twist or bend the module.
- (2) While assembling or installing modules, it can only be in the clean area. The dust and oil may cause electrical short or damage the polarizer.
- (3) Use fingerstalls or soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (4) Do not press or scratch the surface harder than a HB pencil lead on the panel because the polarizer is very soft and easily scratched.
- (5) If the surface of the polarizer is dirty, please clean it by some absorbent cotton or soft cloth. Do not use Ketone type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanently damage the polarizer due to chemical reaction.
- (6) Wipe off water droplets or oil immediately. Staining and discoloration may occur if they left on panel for a long time.
- (7) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contacting with hands, legs or clothes, it must be washed away thoroughly with soap.
- (8) Protect the module from static electricity, it may cause damage to the C-MOS Gate Array IC.
- (9) Do not disassemble the module.
- (10) Do not pull or fold the lamp wire.
- (11) Pins of I/F connector should not be touched directly with bare hands.

#### **8.2 STORAGE PRECAUTIONS**

- (1) High temperature or humidity may reduce the performance of module. Please store LCD module within the specified storage conditions.
- (2) It is dangerous that moisture come into or contacted the LCD module, because the moisture may damage LCD module when it is operating.
- (3) It may reduce the display quality if the ambient temperature is lower than 10 °C. For example, the response time will become slowly, and the starting voltage of lamp will be higher than the room temperature.

#### 8.3 OPERATION PRECAUTIONS

- (1) Do not pull the I/F connector in or out while the module is operating.
- (2) Always follow the correct power on/off sequence when LCD module is connecting and operating. This can prevent the CMOS LSI chips from damage during latch-up.
- (3) The startup voltage of Backlight is approximately 1000 Volts. It may cause electrical shock while assembling with inverter. Do not disassemble the module or insert anything into the Backlight unit.

#### 10 DEFINITION OF LABELS

#### 10.1 CMO MODULE LABEL

The barcode nameplate is pasted on each module as illustration, and its definitions are as following explanation.

(a) Model Name: N141I3 - L02

(b) Revision: Rev. XX, for example: A1, ..., C1, C2 ...etc.

(c) Serial ID: X X X X X X X Y M D X N N N N

- (d) Production Location: MADE IN XXXX. XXXX stands for production location.
- (e) UL/CB logo: "LEOO" especially stands for panel manufactured by CMO Ningbo satisfying UL/CB requirement. "LEOO" is the CMO's UL factory code for Ningbo factory.

Serial ID includes the information as below:

(a) Manufactured Date: Year: 1~9, for 2001~2009

Month: 1~9, A~C, for Jan. ~ Dec.

Day: 1~9, A~Y, for 1st to 31st, exclude I, O and U

(b) Revision Code: cover all the change

(c) Serial No.: Manufacturing sequence of product

**Approval** 

#### 10.2 CMO CARTON LABEL

(a) Production location: Made In XXXX. XXXX stands for production location.
