General Description

* Description

LTM213U6-L01 is a color active matrix TFT (Thin Film Transistor) liquid crystal display (LCD) that uses amorphous silicon TFTs as switching devices. This model is composed of a TFT LCD panel, a driver circuit and a back-light system. The resolution of a 21.3" contains 1600 x 1200 pixels and can display up to 16.7millions colors with wide viewing angles of 89° or higher in all directions.(Vertical viewing angle: 178°, Horizontal viewing angle: 178°)

* Features

- High contrast ratio, high aperture structure
- SPVA(Super Patterned Vertical Alignment) Mode
- Wide viewing angle (±178°)
- High speed response
- UXGA(1600 x1200)
- Replaceable 2 triple CCFTs (Cold Cathode Fluorescent Tube)
- Low Power consumption
- DE only mode
- Narrow bezel and compact design
- Pb-free configuration added

* Applications

Workstation & desktop monitors

Display terminals for AV application products

Monitors for industrial machine and medical appliances

* If the module is used to other applications besides the above, please contact SEC in advance.

* General information

| Items | Specification | Unit | Note |
|-------------------|-------------------------------|--------|------|
| Display area | 432(H) x 324(V) | mm | |
| Driver element | a-Si TFT active matrix | | |
| Display colors | 16.7M (true 8-bit) | colors | |
| Number of pixels | 1600 x 1200 | pixel | |
| Pixel arrangement | RGB vertical stripe | | |
| Pixel pitch | 0.270(H) x 0.270(W) | mm | |
| Display mode | Normally Black | | |
| Surface treatment | Haze 44%, Hard - coating (3H) | | |

| Module | Horizontal(H) | - | (456.0) | - | mm |
| size | Vertical(V) | - | (349.5) | - | mm |
| Size | Depth(D) | - | - | (23.0) | mm |
| Weight | | - | - | (3,550) | g |

1. Absolute Maximum Ratings

1.1 Absolute ratings of environment

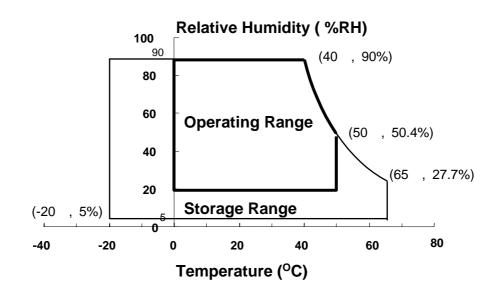

| Item | Symbol | Min. | Max. | Unit | Note |
|---|--------|------|------|------|---------|
| Storage temperature | Tstg | -20 | 65 | | (1) |
| Operating temperature (Glass surface temperature) | Topr | 0 | 50 | | (1) |
| Shock (non - operating) | Snop | - | 50 | G | (2),(4) |
| Vibration (non - operating) | Vnop | - | 1.5 | G | (3),(4) |

Note (1) Temperature and relative humidity range are shown in the figure below.

90 % RH Max. ($40 \, ^{\circ}\text{C} \geq \text{Ta}$)

Maximum wet-bulb temperature at 39 °C or less. (Ta > 40 °C) No condensation.

- (2) 11ms, sine wave, one time for $\pm X$, $\pm Y$, $\pm Z$ axis
- (3) 10-300 Hz, Sweep rate 10min, 30min for X,Y,Z axis
- (4) At vibration and shock test, the fixture which holds the module to be tested has to be hard and rigid enough so that the module would not be twisted or bent by the fixture.

1.2 ELECTRICAL ABSOLUTE RATINGS

(1) TFT LCD Module

$$(V_{SS} = GND = 0 V)$$

| Item | Symbol | Min. | Max. | Unit | Note |
|----------------------|-----------------|---------|------|------|------|
| Power Supply Voltage | V _{DD} | Vss-0.5 | 6.5 | V | (1) |

Note (1) Within Ta (25 ± 2 °C)

(2) BACK-LIGHT UNIT

$$(Ta = 25 \pm 2^{\circ}C)$$

| Item | Symbol | Min. | Max. | Unit. | Note |
|----------------|--------|-------|-------|-------|---------|
| Lamp Current | IL | (3.0) | (8.0) | mArms | (1),(2) |
| Lamp Frequency | fL | (40) | (80) | kHz | (1) |

- Note (1) Permanent damage to the device may occur if maximum values are exceeded. Functional operation should be restricted to the conditions described under Normal Operating Conditions.
 - (2) Specified values are for a single lamp.
 (Refer to the Note (1) in the page 14 for further information.)

2. Optical Characteristics

The following items are measured under stable conditions. The optical characteristics should be measured in a dark room or equivalent state with the methods shown in Note (1).

Measuring equipment: TOPCON BM-5A, BM-7, PHOTO RESEARCH PR650 Eldim EZ-Contrast

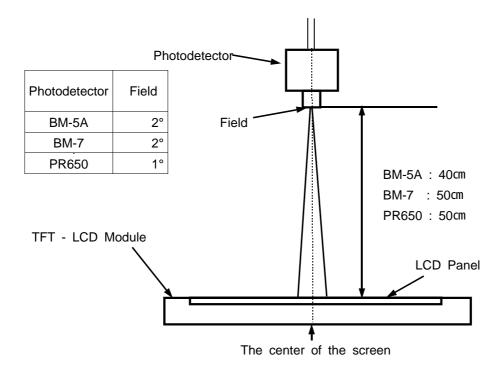

(Inverter Freq. : 50kHz) * Ta = 25 ± 2 °C, VDD=5V, fv= 60Hz, fDCLK=65.125MHz, IL = 7.5mArms

Note (1) Test Equipment Setup

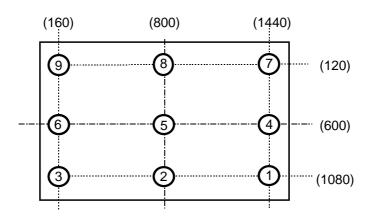

The measurement should be executed in a stable, windless and dark room between 30min and 40min after lighting the back-light at the given temperature for stabilization of the back-light. This should be measured in the center of screen.

Single lamp current : 7.5mA (Refer to the note(1) in the page 14 for more information.) Environment condition : Ta = 25 ± 2 °C

Optical Measuring Equipment Setup

Note (2) Definition of test point

| Doc . No | PI004LTM213U6-L01 | Page | 8/33 |
|----------|-------------------|------|------|
|----------|-------------------|------|------|

Note (3) Definition of Contrast Ratio (C/R)

: Ratio of gray max (Gmax) & gray min (Gmin) at the center point of the panel

$$CR = \frac{G \max}{G \min}$$

Gmax: Luminance with all pixels white Gmin: Luminance with all pixels black

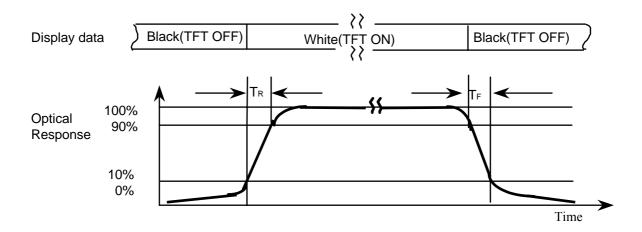

Note (4) Definition of 9 points brightness uniformity

$$Buni = 100*\frac{(B \max - B \min)}{B \max}$$

Bmax : Maximum brightness Bmin : Minimum brightness

Note (5) Definition of Response time

On/Off response time: Sum of Tr, Tf

G to G response time

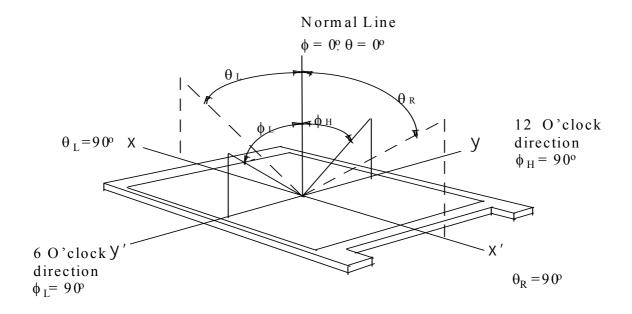

- measuring gray : 31 63, 63 95, 95 127, 127 159, 159 191, 191 223 grays and vice versa
- T_G-G, avg: average response time of ones between above grays
- T_G-_{G, long}: the longest response time of ones between above grays

| Doc . No | PI004LTM213U6-L01 | Page | 9/33 | |
|----------|-------------------|------|------|---|
| | | | | _ |

Note (6) Definition of Luminance of White: Luminance of white at center point

Note (7) Definition of Color Chromaticity (CIE 1931, CIE1976) Color coordinate of Red, Green, Blue & White at center point

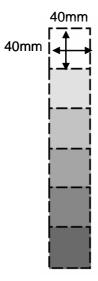

Note (8) Definition of Viewing Angle: Viewing angle range (CR 10, 100)

Note (9) Color Grayscale Linearity

test image: 100% full white pattern with a test pattern as below

test pattern: Squares, 40mm by 40mm in size, filled with 255, 225, 195, 165, 135 and 105 grays steps should be arranged at the center of the screen.

test method

- . 1st gray step: move a square of 255 gray level should be moved into the center of the screen and measure luminance and u' and v' coordinates.
- . next gray step: move a 225 gray square into the center and measure both luminance and coordinates, too.
- . Then, repeat the same procedure for gray steps 195, 165- 135 and 105. test evaluation

$$\Delta u'v' = \sqrt{(u'_A - u'_B)^2 + (v'_A - v'_B)^2}$$

where A, B : 2 gray levels found to have the largest color differences between them

i.e. get the largest u' and v' of each 6 pairs of u' and v' and calculate the u'v'.

3. Electrical Characteristics

3.1 TFT LCD MODULE

 $Ta = 25^{\circ}C$

| | Symbol | Min. | Typ. | Max. | Unit | Note | |
|-------------------------|-------------------------|-------------------|---------|---------|------------|------|---------|
| Voltage of Power Supply | | $V_{ m DD}$ | 4.5 | 5.0 | 5.5 | V | (1) |
| Inter | LVDS | LRU612 | 22M0(LV | DS embe | ded T-con) | | |
| Current of | (a) Black | | - | (1300) | - | mA | |
| Power | (b) White | I_{DD} | - | (1800) | ı | mA | (2),(3) |
| Supply | pply (c) 2Line Vertical | | - | (1800) | (2050) | mA | |
| Vsync Frequency | | f_V | 59 | 60 | 61 | Hz | |
| Hsync Frequency | | \mathbf{f}_{H} | 72 | 74 | 76 | kHz | |
| Main Frequency | | f_{DCLK} | 64.0 | 65.125 | 66.25 | MHz | |
| Rusl | h Current | I_{RUSH} | - | - | 4.0 | A | (4) |

Note (1) The connector for display data & timing signal should be connected.(Vss=0V)

- (2) fv=60Hz, fDCLK =65.125MHz, VDD = 5.0V, DC Current.
- (3) Power dissipation check pattern(LCD Module only)

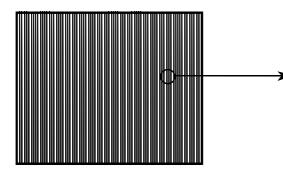

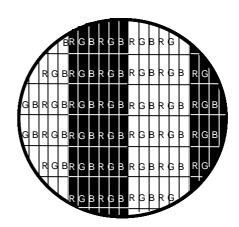

b) White Pattern

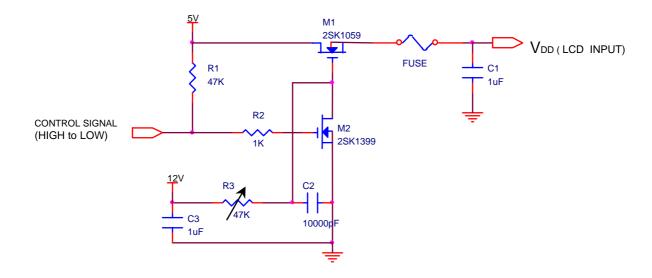

c) 2Line Vertical stripe pattern

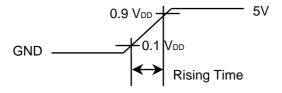

(4) Measurement Conditions

Control Signal: High(+5V) Low(Ground)

All Signal lines to panel, except for power 5V: Ground

The rising time of supplied voltage is controlled to 470us by R3 and C2 value.

3.2 BACK-LIGHT UNIT

The back-light system is an edge - lighting type with 2 triple CCFTs (Cold Cathode Fluorescent Tube). The characteristics of two triple lamps are shown in the following tables.

 $Ta=25 \pm 2^{\circ}C$

| Ite | em | Symbol | Min. | Тур. | Max. | Unit | Note |
|-----------------|-----------------|--------|-------|-------|-----------------------------|-------|------|
| Lamp Current | | IL | (3.0) | (7.5) | (8.0) | mArms | (1) |
| Lamp Voltage | | V_L | - | (740) | - | Vrms | |
| Lamp F | requency | fL | (40) | - | (60) | kHz | (2) |
| inverter | asymmetry rate | Wasy | - | - | 10 | % | (5) |
| waveform | distortion rate | Wdis | - | - | 2 ±10 | % | |
| Startup Voltage | | Vs | - | - | 0 : (1,800) 25 : (1,440) | Vrms | (3) |

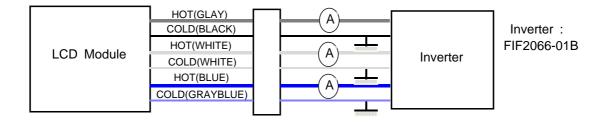

Note) The waveform of the inverter output voltage must be area symmetric and the design of the inverter must have specifications for the modularized lamp.

The performance of the back-light, for example life time or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp. So all the parameters of an inverter should be carefully designed so as not to produce too much leakage current from high-voltage output of the inverter. When you design or order the inverter, please make sure that a poor lighting caused by the mismatch of the back-light and the inverter(miss lighting, flicker, etc.) never occur. When you confirm it, the module should be operated in the same condition as it is installed in your instrument.

Note (1) Lamp current is measured with current meter for high frequency as shown below.

Refer to the block diagram of the back-light unit in the next page for more information.

Specified values are for a single lamp.

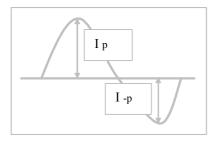

- (2) Lamp frequency may produce interference with horizontal synchronous frequency which may cause line flow on the display. Therefore lamp frequency should be detached from the horizontal synchronous frequency and its harmonics as far as possible in order to avoid interference.
- (3) If an inverter has shutdown function it should keep its output for more than 1 second even if the lamp connector open. Otherwise the lamps may not to be turned on.

| | Doc . No | PI004LTM213U6-L01 | Page | 14/33 |
|--|----------|-------------------|------|-------|
|--|----------|-------------------|------|-------|

- (4) Because the inverter uses high voltage, please disconnect it from the power before assembling or disassembling.
- (5) The output of the inverter must have symmetrical(negative and positive) voltage waveform and current waveform.

Please do not use the inverter which has unsymmetrical voltage and current and spike wave. Designing a system inverter intended to have better display performance, power efficiency and lamp reliability, please follow the requirements the below. They would help increase the lamp lifetime and reduce leakage current.

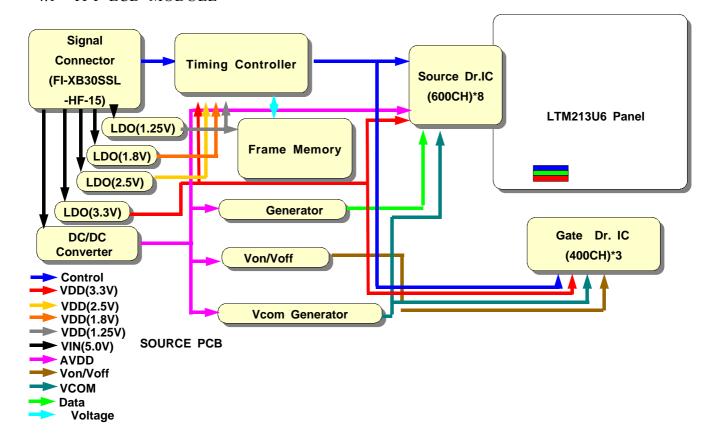

- a. The asymmetry rate of the inverter waveform should be less than 10%.
- b. The distortion rate of the waveform should be within $2 \pm 10\%$.
 - * Inverter output waveform had better be more similar to ideal sine wave.

- * Asymmetry rate: $\mid I_{p} I_{-p} \mid / \mid I_{rms} x \mid 100\%$
- * Distortion rate $I_p \text{ (or } I_{-p}) / I_{rms}$

Note) Definition of Gray

Rn: Red Gray, Gn: Green Gray, Bn: Blue Gray (n = Gray level)

Input Signal: 0 = Low level voltage, 1 = High level voltage

6. Interface Timing

6.1 Timing Parameters (DE only mode)

| SIGNAL | ITEM | SYMBOL | MIN. | TYP. | MAX. | UNIT | NOTE |
|--------------------------------------|----------------|--------|------|--------|-------|--------|---------------------|
| | Frequency | 1/Tc | 64 | 65.125 | 66.25 | MHz | |
| Clock | High Time | Тсн | 4 | - | - | nsec | |
| | Low Time | TCL | 4 | - | - | nsec | (1),(2),(3) |
| Data/DE | Setup Time | TDS | 4 | - | - | nsec | |
| Data/DE | Hold Time | TDH | 4 | - | - | nsec | |
| Data Enable | Setup Time | TES | 4 | - | - | nsec | |
| Frame Frequency | Cycle | Tv | 16.4 | 16.7 | 16.9 | msec | |
| Vertical Active | Display Period | TVD | 1200 | 1200 | 1200 | lines | |
| Display Term | Blank Period | Тув | 29 | - | - | lines | (3) |
| One Line Scanning Time | Cycle | Тн | 850 | 880 | - | clocks | |
| Horizontal Active Display Term | Display Period | Тно | 800 | 800 | 800 | clocks | (3) 2pixel/clock |

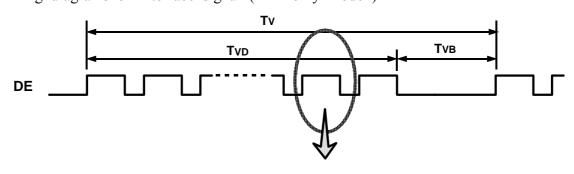

Note (1) Test Point: TTL control signal and CLK at LVDS Tx input terminal in system

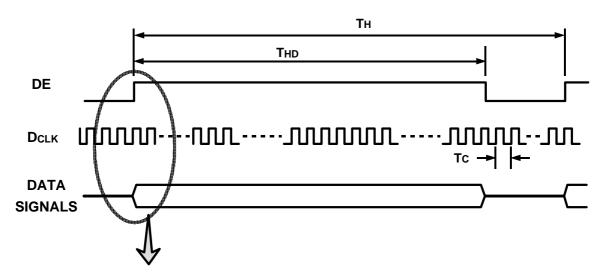

(2) Internal Vcc = 3.3V

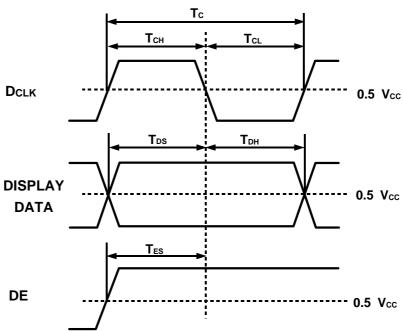

(3) VESA UXGA Coordinated Video Timing (Reduced Blanking)

| Doc . No | PI004LTM213U6-L01 | Page | 24/33 |
|----------|-------------------|------|-------|

6.2 Timing diagrams of interface signal (DE only mode)

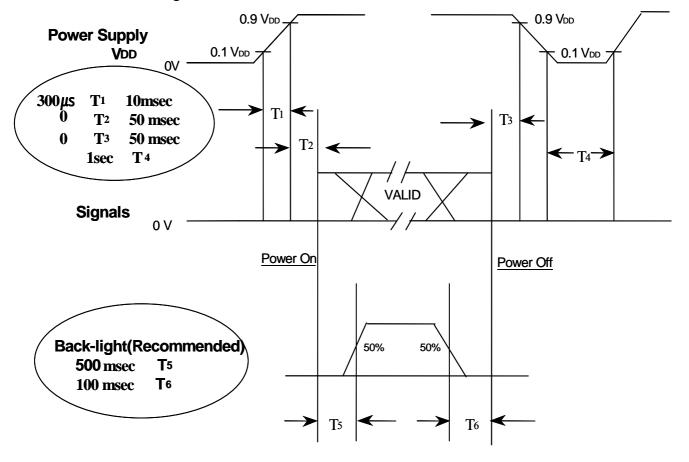

6.3 Power ON/OFF Sequence

To prevent a latch-up or DC operation of the LCD module, the power on/off sequence should be as the diagram below.

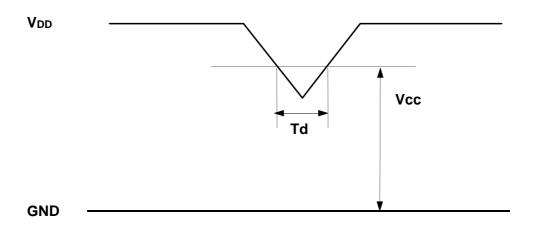

Power ON/OFF Sequence

- Note (1) The supply voltage of the external system for the module input should be the same as the definition of VDD.
 - (2) Apply the lamp voltage within the LCD operation range. When the back-light turns on before the LCD operation or the LCD turns off before the back-light turns off, the display may momentarily become abnormal screen.
 - (3) In case of VDD = off level, please keep the level of input signals low or keep a high impedance.
 - (4) T4 should be measured after the module has been fully discharged between power off and on period.
 - (5) Interface signal should not be kept at high impedance when the power is on.

| _ | Doc . No | PI004LTM213U6-L01 | Page | 26/33 |
|---|----------|-------------------|------|-------|
|---|----------|-------------------|------|-------|

6.4 V_{DD} Power Dip Condition

4.5V V_{DD} 5.5V if V_{DD}(typ) x 20% V_{CC} V_{DD}(typ) x 10%, then, 0<Td 20msec

NOTE

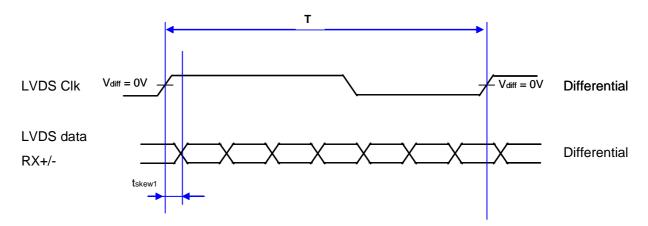

- (1) The above conditions are for the glitch of the input voltage.
- (2) For stable operation of an LCD module power, please follow them. i.e., if typ V_{DD} x 20% Vcc typ V_{DD} x 10%, then Td should be less than 20ms.

6.5 LVDS Input Characteristics

6.5.1 LVDS Receiver input

| Symbol | Parameter | Conditions | Min | Тур | Max | unit | Note |
|----------------------------|-------------------------------------|---|-------|------|-------|------|------|
| V _{TH} | LVDS input high threshold | $V_{CMLVDS} = 1.25V$ | | | +100 | mV | |
| $\mathbf{V}_{\mathbf{TL}}$ | LVDS input low threshold | | -100 | | | mV | |
| VCMLVDS | LVDS input common mode voltage | | 1.125 | 1.25 | 1.375 | V | |
| I _{IN} | Input current | V _{IN} =2.4V/0V V _{DD} =3.6V | -10 | | +10 | μΑ | |
| tskew | skew between LVDS clock & LVDS data | | -200 | 0 | 200 | psec | (1) |

Note (1) LVDS skew

where tskew: skew between LVDS clock & LVDS data,

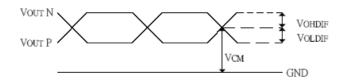

T : 1 period time of LVDS clock

cf) (-/+) of 200psec means LVDS data goes before or after LVDS clock.

8. General Precautions

8.1 Handling

- (a) When the module is assembled, it should be attached to the system firmly using all mounting holes. Be careful not to twist or bend the modules.
- (b) Because the inverter use high voltage, it should be disconnected from power before it is assembled or disassembled.
- (c) Refrain from strong mechanical shock and /or any force to the module. In addition to damage, this may cause improper operation or damage to the module and CCFT back-light.
- (d) Note that polarizers are very fragile and could be easily damaged.

 Do not press or scratch the surface using the harder than a HB pencil lead.
- (e) Wipe off water droplets or oil immediately.

 If you leave the droplets for a long time, staining and discoloration may occur.
- (f) If the surface of the polarizer is dirty, clean it using some absorbent cotton or soft cloth.
- (g) The desirable cleaners are water, IPA(Isopropyl Alcohol) or Hexane.

 Do not use Ketone type materials(ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanent damage to the polarizer due to chemical reaction.
- (h) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, legs or clothes, it must be washed away thoroughly with soap.
- (i) Protect the module from static which may cause damage to the CMOS Gate Array IC.
- (j) Use finger-stalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (k) Do not disassemble the module.
- (1) Do not pull or fold the lamp wire.
- (m) Do not adjust the variable resistor located on the module.
- (n) Protection film for polarizer on the module should be slowly peeled off just before use so that the electrostatic charge can be minimized.
- (o) Pins of I/F connector should not be touched directly with bare hands.

| Doc . No | PI004LTM213U6-L01 | Page | 32/33 |
|----------|-------------------|------|-------|
| | | | |

8.2 Storage

- (a) Do not leave the module in high temperature, high humidity for a long time. It is highly recommended to store the module with temperature from 0 to 35 and relative humidity of less than 70%.
- (b) Do not store the TFT-LCD module in direct sunlight.
- (c) The module should be stored in a dark place.

 It is prohibited to apply sunlight or fluorescent light in storage.

8.3 Operation

- (a) Do not connect or disconnect the module in the "Power On" condition.
- (b) Power supply should always be turned on/off by 6.3 "Power on/off sequence"
- (c) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference should be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.
- (d) The cable between the back-light connector and its inverter power supply should be connected directly with a minimized length. A longer cable between the back-light and the inverter may cause lower luminance of lamp(CCFT) and may require higher startup voltage(Vs).

8.4 Others

- (a) Ultra-violet ray filter is necessary for outdoor operation.
- (b) Avoid condensation of water which may result in improper operation or disconnection of electrode.
- (c) Do not exceed the absolute maximum rating value. (supply voltage variation, input voltage variation, variation in part contents and environmental temperature, and so on)
 Otherwise the module may be damaged.
- (d) If the module keeps displaying the same pattern for a long period of time, the image may be "sticked" to the screen.
 - To avoid image sticking, it is recommended to use a screen saver.
- (e) This module has its circuitry PCB's on the rear side and should be handled carefully in order not to be stressed.
- (f) Please contact SEC in advance when you display the same pattern for a long time.
