1. Handling Precautions

- 1) Since front polarizer is easily damaged, please be cautious and not to scratch it.
- 2) Be sure to turn off power supply when inserting or disconnecting from input connector.
- Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- 4) When the panel surface is soiled, wipe it with absorbent cotton or soft cloth.
- 5) Since the panel is made of glass, it may be broken or cracked if dropped or bumped on hard surface.
- 6) Since CMOS LSI is used in this module, take care of static electricity and insure human earth when handling.
- 7) Do not open nor modify the module assembly.
- 8) Do not press the reflector sheet at the back of the module to any direction.
- 9) In case if a module has to be put back into the packing container slot after it was taken out from the container, do not press the center of the CCFL Reflector edge. Instead, press at the far ends of the CFL Reflector edge softly. Otherwise the TFT Module may be damaged.
- 10) At the insertion or removal of the Signal Interface Connector, be sure not to rotate nor tilt the Interface Connector of the TFT Module.
- 11) After installation of the TFT Module into an enclosure (Notebook PC Bezel, for example), do not twist nor bend the TFT Module even momentary. At designing the enclosure, it should be taken into consideration that no bending/twisting forces are applied to the TFT Module from outside. Otherwise the TFT Module may be damaged.
- 12)Cold cathode fluorescent lamp in LCD contains a small amount of mercury. Please follow local ordinances or regulations for disposal.
- 13) Small amount of materials having no flammability grade is used in the LCD module. The LCD module should be supplied by power complied with requirements of Limited Power Source (IEC60950 or UL1950), or be applied exemption.
- 14) The LCD module is designed so that the CFL in it is supplied by Limited Current Circuit (IEC60950 or UL1950). Do not connect the CFL in Hazardous Voltage Circuit.

2. General Description

G065VN01 V0 is a Color Active Matrix Liquid Crystal Display composed of a TFT-LCD display, a driver circuit, and a backlight system. The screen format is intended to support VGA (640(H) x 480(V)) screen and 16.2M (RGB 8-bits) or 262k colors (RGB 6-bits). All input signals are LVDS interface compatible. Inverter card of backlight is not included.

G065VN01 V0 is designed for industrial display applications.

2.1 Display Characteristics

The following items are characteristics summary on the table under 25 $^{\circ}\mathrm{C}$ condition:

Items	Unit	Specifications
Screen Diagonal	[inch]	6.5

Note 3: Definition of 13 points position

Note 4: The luminance uniformity of 5 and 13 points is defined by dividing the minimum luminance values by the maximum test point luminance

2	Minimum Brightness of five points
δ _{W5} =	Maximum Brightness of five points
2	Minimum Brightness of thirteen points
$\delta_{W13} =$	Maximum Brightness of thirteen points

Note 5: Definition of contrast ratio (CR):

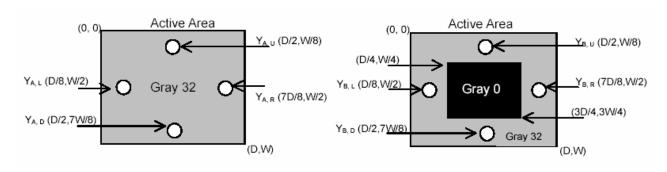

Note 6: Definition of cross talk (CT)

 $CT = | YB - YA | / YA \times 100 (\%)$

Where

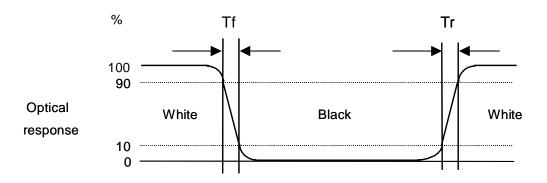

YA = Luminance of measured location without gray level 0 pattern (cd/m2)

YB = Luminance of measured location with gray level 0 pattern (cd/m2)

Note 7: Definition of response time:

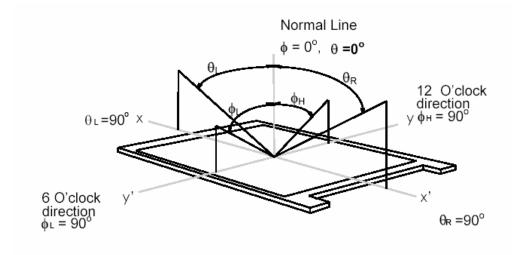

The output signals of photo detector are measured when the input signals are changed from "White" to "Black" (falling time) and from "Black" to "White" (rising time), respectively. The response time interval is between 10% and 90% of amplitudes. Please refer to the figure as below.

Document version 0.1 8/27

Note 8. Definition of viewing angle

Viewing angle is the measurement of contrast ratio \geq 10, at the screen center, over a 180 ° horizontal and 180 ° vertical range (off-normal viewing angles). The 180 ° viewing angle range is broken down as below: 90 ° (θ) horizontal left and right, and 90 ° (Φ) vertical high (up) and low (down). The measurement direction is typically perpendicular to the display surface with the screen rotated to its center to develop the desired measurement viewing angle.

5.2.1 Parameter guideline for CCFL

Following characteristics are measured under a stable condition using an inverter at 25 °C (Room Temperature):

Symbol	Parameter	Min.	Тур.	Max.	Unit	Remark
IRCFL	CCFL operation range	3.5	5	7	[mA] rms	(Ta=25°C) Note 1, 2
FCFL	CCFL Frequency	50	60	70	[KHz]	(Ta=25°C) Note 3
ViCFL (-10°C) (reference)	CCFL Ignition Voltage	-	-	1430	[Volt] rms	(Ta= -10°C)
ViCFL (25°C) (reference)	CCFL Ignition Voltage	-	-	650	[Volt] rms	(Ta=25°C)
		-	365	-	[Volt]	(Ta=25°C) Note 4 IRCFL=5mA
VCFL	CCFL Discharge Voltage		386	-	rms	(Ta=25°C) Note 4 IRCFL=3.8mA
	CCFL Power consumption	-	3.65	-	[\\/o++]	(Ta=25°C) Note 4 IRCFL=5mA
PCFL	(inverter excluded)	-	2.95	-	[Watt]	(Ta=25°C) Note 4 IRCFL=3.8mA
Lamp Life		50,000			Hrs	(Ta=25°C) Note 2 IRCFL = 5mA

Note 1: IRCFL is defined as the return current of an inverter. (In Figure. 1)

(Figure. 1: Measurement of return current)

A stable IRCFL is a current without flicker or biasing waveform provided by inverter that ensures the backlight perform to its specification. The ideal sine waveform should be symmetric in positive and negative polarities and the asymmetry rate of the inverter waveform should be below 10%.

It is recommended to use the inverter with detection circuit to avoid overvoltage, overcurrent, or mismatching waveform. The purpose is to avoid current flow into only one of the lamps when the other one is not in operation.

- Note 2: The life time is defined as having expired when the brightness of the CCFL is reduced by its half. Different inverter designs will result in different input currents, different degrees of leakage, and therefore different impacts on lamp life. Concerning the leakage generated from the LCD panel and the inverter, lamp life is defined as IRCFL equals 5mA and the input current does not exceed 5.5mA
- Note 3: CCFL frequency should be carefully determined to avoid interference between inverter and TFT LCD.
- Note 4: Calculator value for reference (IRCFLxVCFLx2=PCFL).
- Note 5: The display is with dual lamp design, and the CCFL current in above table refers to each lamp

11.1 Sharp Edge Requirements

There will be no sharp edges or comers on the display assembly that could cause injury.

11.2 Materials

11.2.1 Toxicity

There will be no carcinogenic materials used anywhere in the display module. If toxic materials are used, they will be reviewed and approved by the responsible AUO toxicologist.

11.2.2 Flammability

All components including electrical components that do not meet the flammability grade UL94-V1 in the module will complete the flammability rating exception approval process.

The printed circuit board will be made from material rated 94-V1 or better. The actual UL flammability rating will be printed on the printed circuit board.

11.3 Capacitors

If any polarized capacitors are used in the display assembly, provisions will be made to keep them from being inserted backwards.

11.4 National Test Lab Requirement

The display module will satisfy all requirements for compliance to:
