#### 1. General Description

The LP116WH7 is a Color Active Matrix Liquid Crystal Display with an integral LED backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. This TFT-LCD has 11.6 inches diagonally measured active display area with HD resolution (1366 horizontal by 768 vertical pixel array). Each pixel is divided into Red, Green and Blue subpixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus, presenting a palette of more than 262,144 colors. The LP116WH7 has been designed to apply the interface method that enables low power, high speed, low EMI. The LP116WH7 is intended to support applications where thin thickness, low power are critical factors and graphic displays are important. In combination with the vertical arrangement of the subpixels, the LP116WH7 characteristics provide an excellent flat display for office automation products such as Notebook PC.

#### **General Features**

Active Screen Size	11.6 inches diagonal		
Outline Dimension	268.0(H, Typ.) × 168.0(V, Typ.) × 3.0(D, Max.) [mm]		
Pixel Pitch	0.18735 mm X 0.18735 mm		
Pixel Format	1366 horiz. by 768 vert. Pixels RGB strip arrangement		
Color Depth	6bit, 262,144 colors		
Luminance, White	220 cd/m²(Typ.)		
Power Consumption	Total 2.80W (Typ.) Logic : 0.85W (Typ. @ Mosaic), B/L : 1.95W (Typ.)		
Weight	200g (Max.)		
Display Operating Mode	Normally black		
Surface Treatment	Hard Coating(3H), Anti-Glare treatment of the front polarizer		
RoHS Compliance	Yes		
BFR / PVC / As Free	Yes for all		

### 2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

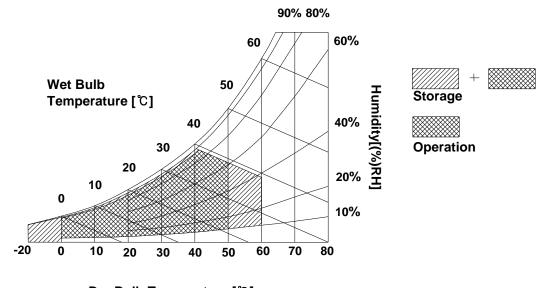

Table 1. ABSOLUTE MAXIMUM RATINGS

Dovomotor	Symbol	Val	ues	Linita	Notes
Parameter	Symbol	Min	Max	Units	Notes
Power Input Voltage	VCC	-0.3	4.0	V <sub>DC</sub>	at 25 ± 2°C
Operating Temperature	Тор	0	50	°C	1
Storage Temperature	Нѕт	-20	60	°C	1
Operating Ambient Humidity	Нор	10	90	%RH	1
Storage Humidity	Нѕт	10	90	%RH	1

Note: 1. Temperature and relative humidity range are shown in the figure below.

Wet bulb temperature should be 39°C Max, and no condensation of water.

Note: 2. Storage Condition is guaranteed under packing condition.

Dry Bulb Temperature [℃]

### 3. Electrical Specifications

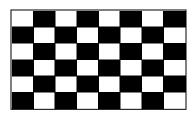

### 3-1. LCD Electrical Characteristics

Table 2. LCD ELECTRICAL CHARACTERISTICS

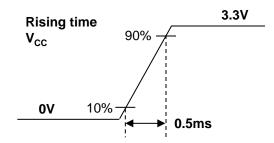

Parameter	Symbol		Values	Unit	Notes		
Parameter	Symbol	Min	Тур	Max	Oilit	Notes	
Power Supply Input Voltage	Vcc	3.0	3.3	3.6	V	1	
Permissive Power Supply Inpu	Vccrp	-	-	100	$mV_{p-p}$		
Power Supply Input Current	Mosaic	Icc	-	270	300	mA	2
Power Consumption		Pcc	-	0.85	1.0	W	2
Power Supply Inrush Current	Icc_p	-	-	1.5	Α	3	
Differential Impedance		ZLVDS	90	100	110	Ω	

#### Note)

- 1. The measuring position is the connector of LCM and the test conditions are under 25  $^{\circ}$ C, fv = 60Hz
- 2. The specified  $I_{CC}$  current and power consumption are under the  $V_{CC}$  = 3.3V , 25  $^{\circ}$ C, fv = 60Hz condition and Mosaic pattern.

3. The  $V_{\text{CC}}$  rising time is same as the minimum of T1 at Power on sequence.

Ver. 1.0 Jul. 13, 2015 6 / 39

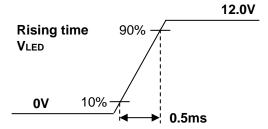

### 3-2. LED Backlight Electrical Characteristics

Table 3. LED B/L ELECTRICAL CHARACTERISTICS

Parameter		Cumbal		Values		Unit	Notes
		Symbol	Min	Тур	Max		
LED Power Input Vo	oltage	VLED	5.0	12.0	21.0	V	1
LED Power Input Co	ırrent	ILED	-	160	170	mA	2
LED Power Consum	ption	PLED	-	1.95	2.0	W	2
LED Power Inrush 0	ILED_P	-	-	1.5	Α	3	
PWM Duty Ratio		5	-	100	%	4	
PWM Jitter			0	-	0.2	%	5
PWM Frequency		Fрwм	200	-	2000	Hz	6
PWM	High Level Voltage	V <sub>PWM_H</sub>	2.5	-	3.6	V	
PVVIVI	Low Level Voltage	V <sub>PWM_L</sub>	0	-	0.3	V	
LED EN	High Voltage	VLED_EN_H	2.5	-	3.6	V	
LED_EN	Low Voltage	VLED_EN_L	0	-	0.3	V	
Life Time			15,000	-	-	Hrs	7

#### Note)

- 1. The measuring position is the connector of LCM and the test conditions are under 25 °C.
- 2. The current and power consumption with LED Driver are under the  $V_{LED}$  = 12.0V , 25°C, PWM Duty 100% and White pattern with the normal frame frequency operated(60Hz).
- 3. The  $V_{\text{LED}}$  rising time is same as the minimum of T13 at Power on sequence.

- 4. The operation of LED Driver below minimum dimming ratio may cause flickering or reliability issue.
- 5. If Jitter of PWM is bigger than maximum, it may induce flickering.
- 6. This Spec. is not effective at 100% dimming ratio as an exception because it has DC level equivalent to 0Hz. In spite of acceptable range as defined, the PWM Frequency should be fixed and stable for more consistent brightness control at any specific level desired.
- 7. The life time is determined as the time at which brightness of LCD is 50% compare to that of minimum value specified in table 7. under general user condition.

Ver. 1.0 Jul. 13, 2015 7 / 39

# 3-4-3. eDP Main Link Signal

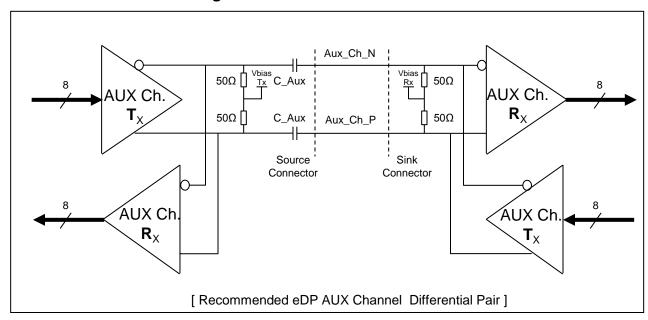

Parameter	Symbol	Min	Тур	Max	Unit	Notes
Unit Interval for high bit rate (2.7Gbps / lane)	UI_HBR	-	370	-	ps	
Unit Interval for reduced bit rate (1.62Gbps / lane)	UI_RBR	-	617	-	ps	
Link Clock Down Chronding	Amplitude	0	-	0.5	%	
Link Clock Down Spreading	Frequency	30		33	kHz	
Differential peak-to-peak voltage	V	350	-	-	mV	For HBR(2.7Gbps)
at Source side connector	V <sub>TX-DIFFp-p</sub>	400	-	-	IIIV	For RBR(1.62Gbps)
EYE width	_	0.58	-	-	UI	For HBR(2.7Gbps)
at Source side connector	T <sub>TX-EYE-CONN</sub>	0.75	-	-	UI	For RBR(1.62Gbps)
Differential peak-to-peak voltage	.,	150	-	-	\/	For HBR(2.7Gbps)
at Sink side connector	V <sub>RX-DIFFp-p</sub>	136	-	-	mV	For RBR(1.62Gbps)
EYE width	_	0.51	-	-	UI	For HBR(2.7Gbps)
at Sink side connector	T <sub>RX-EYE-CONN</sub>	0.46	-	-	UI	For RBR(1.62Gbps)
Rx DC common mode voltage	V <sub>RX CM</sub>	0	-	1.0	V	
AC Coupling Capacitor	C <sub>SOURCE_ML</sub>	75		200	nF	Source side

#### Note)

- 1. Termination resistor is typically integrated into the transmitter and receiver implementations.
- 2. AC Coupling Capacitor is not placed at the sink side.
- 3. In cabled embedded system, it is recommended the system designer ensure that EYE width and voltage are met at the sink side connector pins.

# 3-4-4. eDP AUX Channel Signal

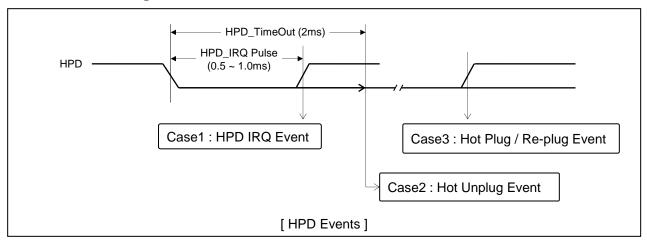

Parameter	Symbol	Min	Тур	Max	Unit	Notes
AUX Unit Interval	UI	0.4	-	0.6	us	
AUX Jitter at Tx IC Package Pins	<b>T</b>	-	-	0.04	UI	Equal to 24ns
AUX Jitter at Rx IC Package Pins	T <sub>jitter</sub>	-	-	0.05	UI	Equal to 30ns
AUX Peak-to-peak voltage at Connector Pins of Receiving		0.39	-	1.38	V	
AUX Peak-to-peak voltage at Connector Pins of Transmitting	V <sub>AUX-DIFFp-p</sub>	0.36	-	1.36	V	
AUX EYE width at Connector Pins of Tx and Rx		0.98	-	-	UI	
AUX DC common mode voltage	V <sub>AUX-CM</sub>	0	-	1.0	V	
AUX AC Coupling Capacitor	C <sub>SOURCE-AUX</sub>	75		200	nF	Source side

#### Note)

- 1. Termination resistor is typically integrated into the transmitter and receiver implementations.
- 2. AC Coupling Capacitor is not placed at the sink side.
- 3.  $V_{AUX-DIFFp-p} = 2^* \mid V_{AUXP} V_{AUXN} \mid$

### 3-4-5. eDP HPD Signal

Parameter	Symbol	Min	Тур	Max	Unit	Notes
HPD Voltage		2.25	-	3.6	V	Sink side Driving
Hot Plug Detection Threshold	HPD	2.0	-	-	V	Course side Detection
Hot Unplug Detection Threshold		-	-	0.8	V	Source side Detecting
HPD_IRQ Pulse Width	HPD_IRQ	0.5	-	1.0	ms	
HPD_TimeOut		2.0	-	-	ms	HPD Unplug Event

#### Note)

- 1. HPD IRQ: Sink device wants to notify the Source device that Sink's status has changed so it toggles HPD line, forcing the Source device to read its Link / Sink Receiver DPCD field via the AUX-CH
- 2. HPD Unplug: The Sink device is no longer attached to the Source device and the Source device may then disable its Main Link as a power saving mode
- 3. Plug / Re-plug: The Sink device is now attached to the Source device, forcing the Source device to read its Receiver capabilities and Link / Sink status Receiver DPCD fields via the AUX-CH

### 3-5. Signal Timing Specifications

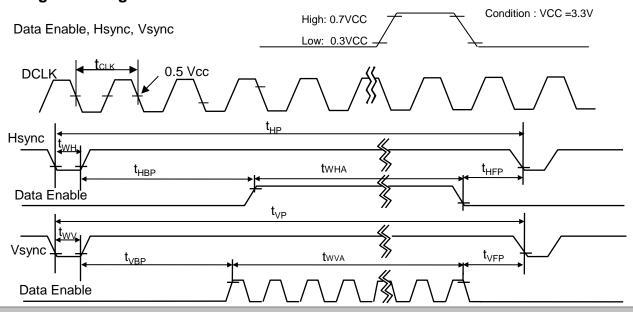

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications and specifications of eDP Tx/Rx for its proper operation.

**ITEM Symbol** Min Typ Unit Note Max **DCLK** 76.3 Frequency MHz  $f_{CLK}$ 1612 Period 1608 1610  $t_{HP}$ 32 32 32 Hsync Width  $t_{WH}$  $t_{CLK}$ Width-Active 1366  $t_{WHA}$ Period 788 790 794  $t_{VP}$ Vsync Width 5 5 5  $t_{WV}$  $t_{HP}$ Width-Active 768  $t_{WVA}$ 162 164 166 Horizontal back porch  $t_{HBP}$  $t_{CLK}$ 48 48 48 Horizontal front porch Data  $t_{HFP}$ Enable 12 14 16 Vertical back porch  $t_{VBP}$  $t_{HP}$ 3 3 5 Vertical front porch t<sub>V/FP</sub>

**Table 4. TIMING TABLE** 

**Notice.** all reliabilities are specified for timing specification based on refresh rate of 60Hz. However, LP116WH7 has a good actual performance even at lower refresh rate (e.g. 40Hz or 50Hz) for power saving Mode, whereas LP116WH7 is secured only for function under lower refresh rate. 60Hz at Normal mode, 50Hz, 40Hz at Power save mode. Don't care Flicker level (Power save mode).

# 3-6. Signal Timing Waveforms

# 3-7. Color Input Data Reference

The brightness of each primary color (red, green and blue) is based on the 6-bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

Table 5. COLOR DATA REFERENCE

									Inp	ut Co	olor E	ata							
	Color			RE	ΞD					GRI	EEN					BL	UE

- Note) 1. Do not insert the mating cable when system turn on.
  - 2. Valid Data have to meet "3-3. eDP Signal Timing Specifications"
  - 3. Video Signal, LED\_EN and PWM need to be on pull-down condition on invalid status.
  - 4. LGD recommend the rising sequence of VLED after the Vcc and valid status of Video Signal turn on.

### 4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 20 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\Theta$  equal to  $0^{\circ}$ .

FIG. 1 presents additional information concerning the measurement equipment and method.

Optical Stage(x,y)

	y axis, down (Φ=270°)	Θd	80	-	-			
Gray Scale							6	

#### Note)

1. It should be measured in the center of screen(1 Point). Contrast Ratio(CR) is defined mathematically as

2. Surface luminance is the average of 5 point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 2.

$$L_{WH}$$
 = Average(1,2, ... 5 Point)

3. The variation in surface luminance, The panel total variation ( $\delta$  WHITE) is determined by measuring N at each test position 1 through 13 and then defined as following numerical formula. For more information see FIG 2.

$$\delta \text{ WHITE (5P)} = \frac{\text{Maximum (1,2, ... 5 Point)}}{\text{Minimum (1,2, ... 5 Point)}} \qquad \delta \text{ WHITE (13P)} = \frac{\text{Maximum (1,2, ... 13 Point)}}{\text{Minimum (1,2, ... 13 Point)}}$$

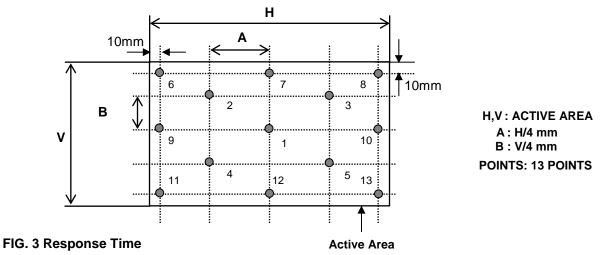

- 4. Response time is the time required for the display to transition from black to white (rise time, Tr) and from white to black (falling time, Tf). For additional information see FIG 3.
- 5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.
- 6. Gray scale specification

Gray Level	Luminance [%] (Typ)
LO	0.17
L7	0.95
L15	6.40

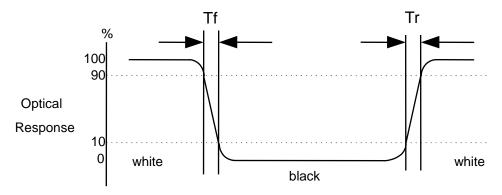

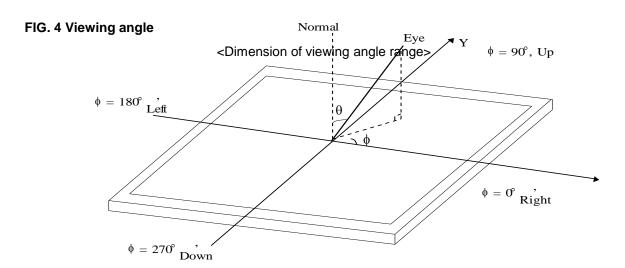

#### FIG. 2 Luminance

<Measuring point for Average Luminance & measuring point for Luminance variation>

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

#### 5. Mechanical Characteristics

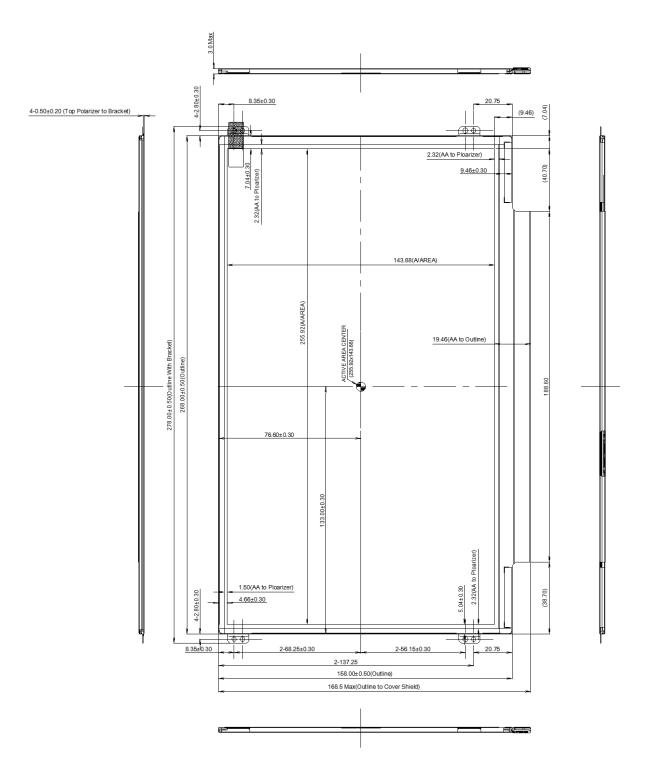

The contents provide general mechanical characteristics for the model LP116WH7. In addition the figures in the next page are detailed mechanical drawing of the LCD.

	Horizontal	268.0 ± 0.5 mm			
Outline Dimension	Vertical	168.0 ± 0.5 mm			
	Thickness	3.0 mm Max.			
Bezel Area	Horizontal	260.65 mm			
Dezei Alea	Vertical	147.80 mm			
Active Display Area	Horizontal	255.92 mm			
Active Display Area	Vertical 143.88 mm				
Weight	200g (Max.)				
Surface Treatment	Hard Coating(3H), Anti-Glare treatment of the front polarize				

<FRONT VIEW>

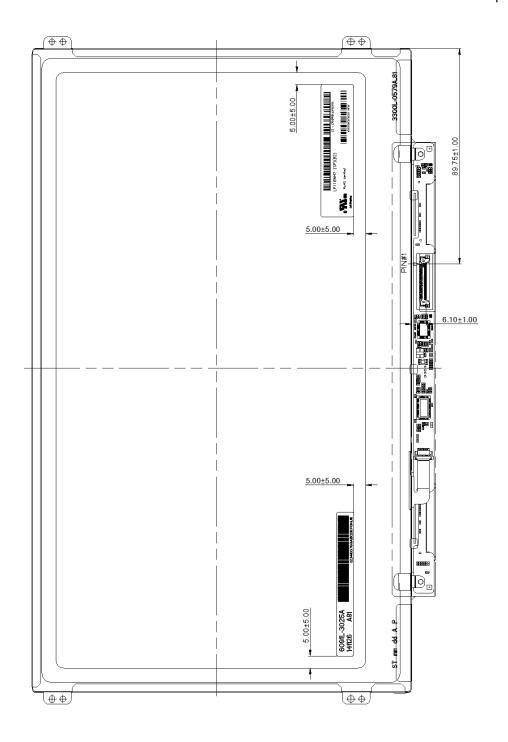

Note) Unit:[mm], General tolerance: ± 0.5mm

<REAR VIEW>

Note) Unit:[mm], General tolerance:  $\pm$  0.5mm Label information refer to the page. 24

# 6. Reliability

#### Environment test condition

No.	Test Item	Conditions
1	High temperature storage test	Ta= 60°C, 240h
2	Low temperature storage test	Ta= -20°C, 240h
3	High temperature operation test	Ta= 50°C, 50%RH, 240h
4	Low temperature operation test	Ta= 0°C, 240h
5	Vibration test (non-operating)	Random, 1.0Grms, 10 ~ 300Hz(PSD 0.0035) 3 axis, 30min/axis
6	Shock test (non-operating)	<ul> <li>No functional or cosmetic defects following a shock to all 6 sides delivering at least 180 G in a half sine pulse no longer than 2 ms to the display module</li> <li>No functional defects following a shock delivering at least 200 g in a half sine pulse no longer than 2 ms to each of 6 sides. Each of the 6 sides will be shock tested with one each display, for a total of 6 displays</li> </ul>
7	Altitude operating storage / shipment	0 ~ 10,000 feet (3,048m) 24Hr 0 ~ 40,000 feet (12,192m) 24Hr

### [ Result Evaluation Criteria ]

- 1. Comparing the initial functional FOS status, there should be no major change which might affect the practical display function when the display reliability test is conducted.
- 2. After conduct reliability tests, LGD guarantees only functional FOS quality.

#### 7. International Standards

#### 7-1. Safety

- a) UL 60950-1, Underwriters Laboratories Inc.
  Information Technology Equipment Safety Part 1 : General Requirements.
- b) CAN/CSA-C22.2 No. 60950-1-07, Canadian Standards Association.
  Information Technology Equipment Safety Part 1 : General Requirements.
- c) EN 60950-1, European Committee for Electro technical Standardization (CENELEC). Information Technology Equipment Safety Part 1 : General Requirements.
- d) IEC 60950-1, The International Electro technical Commission (IEC).
   Information Technology Equipment Safety Part 1: General Requirements

#### 7-2. Environment

a) RoHS, Directive 2011/65/EU of the European Parliament and of the council of 8 June 2011

### 8. Packing

# 8-1. Designation of Lot Mark

LP116WH7 (SP)(B2)

RoHS Verified

a) Lot Mark

#### b) Location of Lot Mark

Serial No. is printed on the label. The label is attached to the backside of the LCD module. This is subject to change without prior notice.

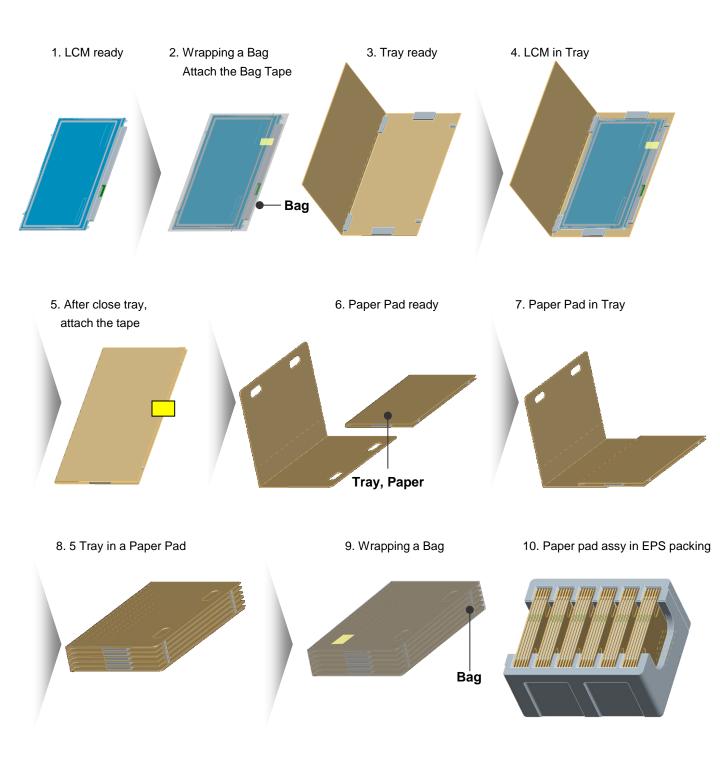

# 8-2. Packing Form

a) Package quantity in one box: 30 ea

b) Box Size : 478 \* 365 \* 244 mm

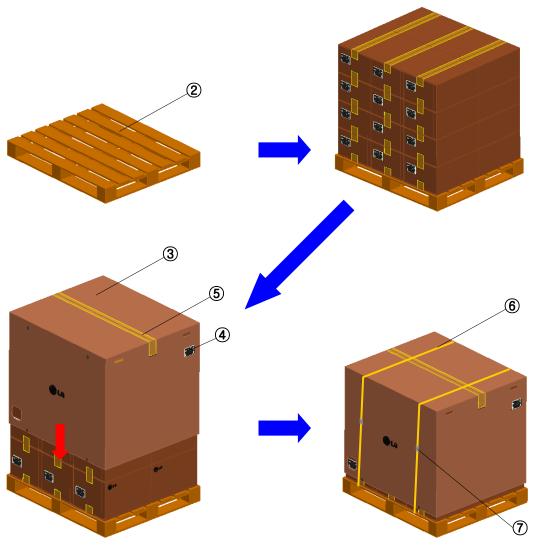

# 8-3. Packing Assembly

# 9-2 Packing Assembly

NO.	DESCRIPTION	MATERIAL
1	Packing AssY	
2	Pallet	Plywood
3	Angle Cover	SW
4	Label	YUPO 100X70
5	TAPE	OPP 70MMX300M
6	Band	PP
7	CLIP	Steel

#### 9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

#### 9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.
  - Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.
- (10) When handling the LCD module, it needs to handle with care not to give mechanical stress to the PCB and Mounting Hole area."

#### 9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :  $V=\pm 200 mV$ (Over and under shoot voltage)
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.

#### 9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

#### 9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

#### 9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.

  It is recommended that they be stored in the container in which they were shipped.

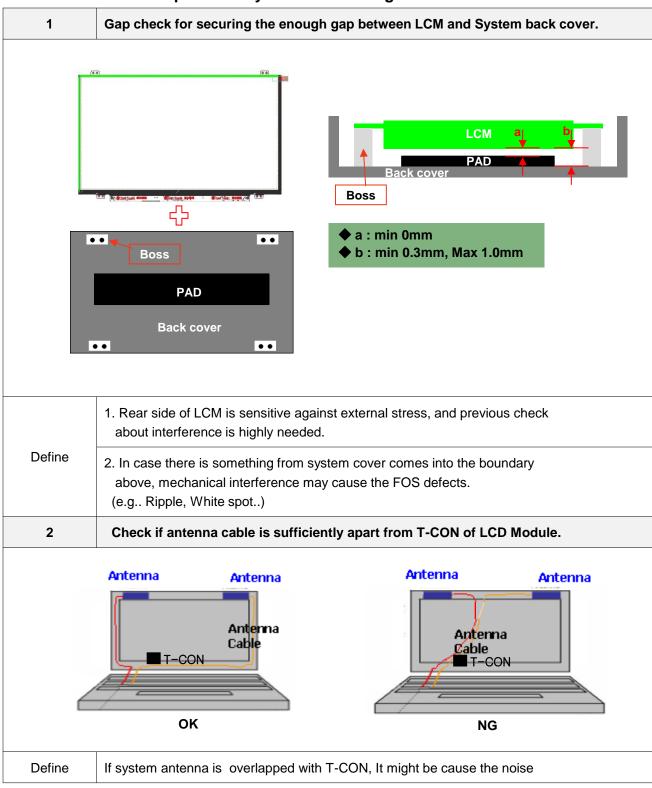

#### 9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.
  - Please carefully peel off the protection film without rubbing it against the polarizer.
- (3) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- (4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

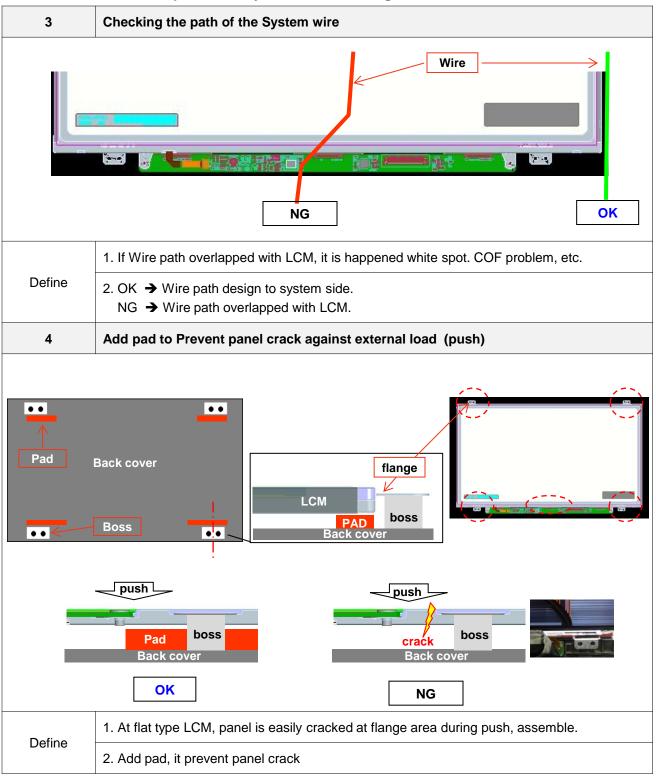

#### 9-7. THE LGD QA RESPONSIBILITY WILL BE AVOIDED IN CASE OF BELOW

- (1) When the customer attaches TSM(Touch Sensor Module) on LCM without Supplier's approval.
- (2) When the customer attaches cover glass on LCM without Supplier's approval.
- (3) When the LCMs were repaired by 3rd party without Supplier's approval.
- (4) When the LCMs were treated like Disassemble and Rework by the Customer and/or Customer's representatives without supplier's approval.
