1. General Description

The LP150E07(A2) is a Color Active Matrix Liquid Crystal Display with an integral Cold Cathode Fluorescent Lamp (CCFL) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. This TFT-LCD has 15.0 inches diagonally measured active display area with SXGA+ resolution(1050 vertical by 1400 horizontal pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 6-bit gray scale signal for each dot, thus, presenting a palette of more than 262,144 colors.

The LP150E07(A2) has been designed to apply the interface method that enables low power, high speed, low EMI.

The LP150E07(A2) is intended to support applications where thin thickness, low power are critical factors and graphic displays are important. In combination with the vertical arrangement of the sub-pixels, the LP150E07(A2) characteristics provide an excellent flat display for office automation products such as Notebook PC.

General Features

Active Screen Size	15 0 inches/29, 1cm) diagonal
Active Screen Size	15.0 inches(38. 1cm) diagonal
Outline Dimension	317.3(H) × 241.5(V) × 6.0(D) mm (Max.)
Pixel Pitch	0.2175 mm × 0.2175 mm
Pixel Format	1400 horiz. By 1050 vert. Pixels RGB strip arrangement
Color Depth	6-bit, 262,144 colors
Luminance, White	200cd/m ² (Tpy.), 170 cd/m ² (Min.), 5p average
Power Consumption	7.33 W
Weight	575g (Max.) w/ inverter and bracket
Display Operating Mode	Transmissive mode, normally white
Surface Treatment	Hard coating(3H) Anti-glare treatment of the front polarizer

Ver. 1.2 Oct. 6. 2003 4 / 27

2. Absolute Maximum Ratings

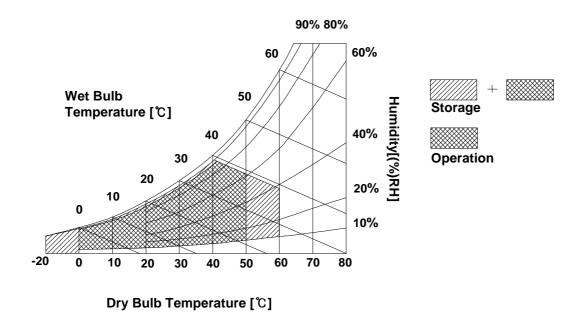

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Table 1. ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Val	ues	Units	Notes	
Farameter	Syllibol	Min	Max	Offics		
Power Input Voltage	VCC	-0.3	4.0	Vdc	at 25 ± 5°C	
Operating Temperature	Тор	0	50	°C	1	
Storage Temperature	Тѕт	-20	60	°C	1	
Operating Ambient Humidity	Нор	10	90	%RH	1	
Storage Humidity	Нѕт	10	90	%RH	1	

Note: 1. Temperature and relative humidity range are shown in the figure below.

Wet bulb temperature should be 39°C Max, and no condensation of water.

3. Electrical Specifications

3-1. Electrical Characteristics

The LP150E07(A2) requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input which powers the CCFL, is typically generated by an inverter. The inverter is an external unit to the LCD.

Table 2. ELECTRICAL CHARACTERISTICS

Dovometer	Coursels at	Values			Linit	Notes	
Parameter	Symbol	Min	Тур	Max	Unit	Notes	
MODULE :							
Power Supply Input Voltage	VCC	3.0	3.3	3.6	V_{DC}

Output Power Consumption	P _{out}	3.65	4.28	4.91	W	6	
Open Lamp Voltage	V_{OPEN}	1400	-	1800	V_{RMS}	8	
Efficiency	η	75	-	-	%	9	
Striking Time	T _S	0.6	-	1.4	sec	8	

Note)

- 1. The specified current and power consumption are under the Vcc = 3.3V, $25^{\circ}C$, fv = 60Hz condition whereas mosaic(checker) pattern is displayed and fv is the frame frequency.
- 2. This impedance value is needed to proper display and measured form LVDS Tx to the mating connector.
- 3. The typical operating current is for the typical surface luminance (L_{WH}) in optical characteristics.

Note)

- 4. Define the brightness of the lamp after being lighted for 5 minutes as 100%, Ts is the time required for the brightness of the center of the lamp to be not less than 95%.
- 5. The life time is determined as the time at which brightness of lamp is 50% compare to that of initial value at the typical lamp current.
- 6. $V_{IN} = 14.4V(Typ),00_H$
- 7. SMData=00_H
- 8. No load, SMData=00_H
- 9. $V_{IN} = 9V(Min),00_H$

3-2. Interface Connections

This LCD employs two interface connections, a 30 pin connector is used for the module electronics interface and the other connector is used for the integral backlight system.

The electronics interface connector is a model FIXB30SRL-HF11 manufactured by JAE.

Table 3. MODULE CONNECTOR PIN CONFIGURATION (CN1)

3-5. Color Input Data Reference

The brightness of each primary color (red,green and blue) is based on the 6-bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

Table 7. COLOR DATA REFERENCE

								Input Color Data

T ₆	0	-	10	(ms)
T ₇	400	-	-	(ms)
T ₈	10	-	-	(ms)

Note)

- 1. Please avoid floating state of interface signal at invalid period.
- 2. When the interface signal is invalid, be sure to pull down the power supply for LCD VCC to 0V.
- 3. Lamp power must be turn on after power supply for LCD and interface signal are valid.

4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 30 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and Θ equal to 0° .

FIG. 1 presents additional information concerning the measurement equipment and method.

Table 9. OPTICAL CHARACTERISTICS

 $Ta=25^{\circ}C,\ VCC=3.3V,\ f_{V}=60Hz,\ f_{CLK}=65MHz,\ \textbf{lout=6.3mA}(SMB-DAT=00H)$

Doromotor	Cumbal		Values		Linita	Notes

x axis, left (Φ=180°)	Θl	60	- -		degree	
y axis, up (Φ=90°)	Θu	45	-	-	degree	
' ý axis, down · · · · · · · · · · · · · · · · · · ·	Θd	45	-	-	degree	

Note)

1. Contrast Ratio(CR) is defined mathematically as

Contrast Ratio =

Surface Luminance with all black pixels

2. Surface luminance is the average of 5 point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 1.

$$L_{WH} = Average(L_1, L_2, \dots L_5)$$

3. The variation in surface luminance , The panel total variation (δ_{WHITE}) is determined by measuring L_N at each test position 1 through 13 and then defined as followed numerical formula. For more information see FIG 2.

$$\delta_{\text{WHITE}} = \frac{\text{Maximum}(\textbf{L}_{1}, \textbf{L}_{2}, \ \dots \ \textbf{L}_{13}) \text{ - Minimum}(\textbf{L}_{1}, \textbf{L}_{2}, \ \dots \ \textbf{L}_{13})}{\text{Maximum}(\textbf{L}_{1}, \textbf{L}_{2}, \ \dots \ \textbf{L}_{13})} \times 100$$

- 4. Response time is the time required for the display to transition from white to black (rise time, Tr_R) and from black to white(Decay Time, Tr_D). For additional information see FIG 3.
- 5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.
- 6. Gray scale specification

a) Package quantity in one box : 10 pcs b) Box Size : 372mm × 317mm × 308mm

9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.
 Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage : $V=\pm\ 200mV(Over\ and\ under\ shoot\ voltage)$
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.

9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.

 It is recommended that they be stored in the container in which they were shipped.

9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
