Note (2) If PWM control frequency is applied in the range less than 1KHz, the "waterfall" phenomenon on the screen may be found. To avoid the issue, it's a suggestion that PWM control frequency should follow the criterion as below.

PWM control frequency
$$f_{\text{PWM}}$$
 should be in the range
$$(N+0.33)*f \leq f_{\text{PWM}} \leq (N+0.66)*f$$

$$N: \text{Integer} \ \ (N\geq 3)$$

$$f: \text{Frame rate}$$

Note (3) The specified LED power supply current is under the conditions at "LED_VCCS = Typ.", Ta = 25 \pm 2 °C, f_{PWM} = 200 Hz, Duty=100%.

Note (1) Definition of Viewing Angle (θx , θy):

Normal

Note (2) Definition of Contrast Ratio (CR):

The contrast ratio can be calculated by the following expression.

Contrast Ratio (CR) = L63 / L0

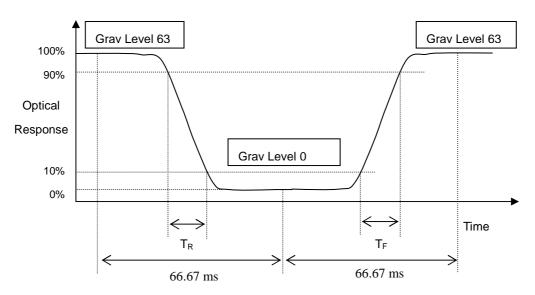

L63: Luminance of gray level 63

L 0: Luminance of gray level 0

CR = CR(1)

CR (X) is corresponding to the Contrast Ratio of the point X at Figure in Note (6).

Note (3) Definition of Response Time (T_R, T_F):

Note (4) Definition of Average Luminance of White (LAVE):

Measure the luminance of White at 5 points

$$L_{AVE} = [L(1) + L(2) + L(3) + L(4) + L(5)] / 5$$

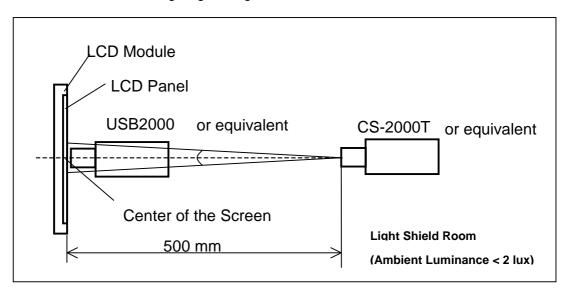

L(x) is corresponding to the luminance of the point X at Figure in Note (6)

Version 3.0 25 April 2013 19 / 35

Note (5) Measurement Setup:

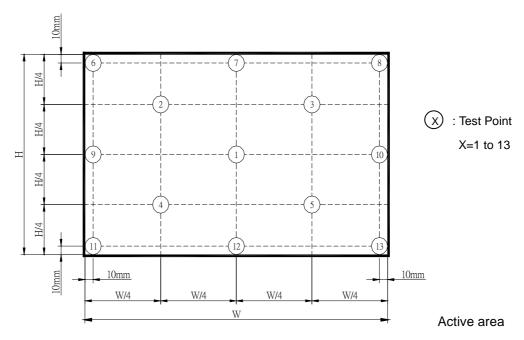

The LCD module should be stabilized at given temperature for 20 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting Backlight for 20 minutes in a windless room.

Note (6) Definition of White Variation (δW):

Measure the luminance of White at 5 points

 $\delta W_{5p} = \{Minimum [L (1)\sim L (5)] / Maximum [L (1)\sim L (5)]\}*100\%$

Note (7) The listed optical specifications refer to the initial value of manufacture, but the condition of the specifications after long-term operation will not be warranted.

8. PRECAUTIONS

8.1 HANDLING PRECAUTIONS

- (1) The module should be assembled into the system firmly by using every mounting hole. Be careful not to twist or bend the module.
- (2) While assembling or installing modules, it can only be in the clean area. The dust and oil may cause electrical short or damage the polarizer.
- (3) Use fingerstalls or soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (4) Do not press or scratch the surface harder than a HB pencil lead on the panel because the polarizer is very soft and easily scratched.
- (5) If the surface of the polarizer is dirty, please clean it by some absorbent cotton or soft cloth. Do not use Ketone type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanently damage the polarizer due to chemical reaction.
- (6) Wipe off water droplets or oil immediately. Staining and discoloration may occur if they left on panel for a long time.
- (7) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contacting with hands, legs or clothes, it must be washed away thoroughly with soap.
- (8) Protect the module from static electricity, it may cause damage to the C-MOS Gate Array IC.
- (9) Do not disassemble the module.
- (10) Do not pull or fold the LED wire.
- (11) Pins of I/F connector should not be touched directly with bare hands.

8.2 STORAGE PRECAUTIONS

- (1) High temperature or humidity may reduce the performance of module. Please store LCD module within the specified storage conditions.
- (2) It is dangerous that moisture come into or contacted the LCD module, because the moisture may damage LCD module when it is operating.
- (3) It may reduce the display quality if the ambient temperature is lower than 10 °C. For example, the response time will become slowly, and the starting voltage of LED will be higher than the room temperature.

8.3 OPERATION PRECAUTIONS

- (1) Do not pull the I/F connector in or out while the module is operating.
- (2) Always follow the correct power on/off sequence when LCD module is connecting and operating. This can prevent the INXS LSI chips from damage during latch-up.
- (3) The startup voltage of Backlight is approximately 1000 Volts. It may cause electrical shock while assembling with converter. Do not disassemble the module or insert anything into the Backlight unit.

	test.
	c). Interference is also forbidden in the act of system front-cover deformation during swing test, hinge test, knock test, or during pooling inspection procedure. d). To remain sufficient gap, design with system rib higher than maximum panel thickness is recommended. Note: Recommend at least 0.1mm gap. If the gap is less than recommendation, please check with INX.
4	Design gap D1 & D2 between system front-cover & PCB Assembly.
	System front-cover LCD Backlight PCB with components
Definition	a). Sufficient gap between system front-cover & PCB assembly is a must for preventing from abnormal display after backpack test, hinge test, twist test or pogo test. b). Interference between panel and system front-cover is forbidden after reliability test. c). Interference is also forbidden in the act of system front-cover deformation during swing test, hinge test, knock test, or during pooling inspection procedure. d). To remain sufficient gap, design with system rib higher than maximum panel thickness is recommended. Note: Recommend for D1 at least 0.1mm gap, D2 at least 2.0mm gap. If the gap is less than recommendation, please check with INX.
5	Interference examination of antenna cable and WebCam wire
	Antenna WebCam Wire WebCam Wire ok NG ok
Definition	a). Antenna cable or WebCam wire overlap with panel outline is forbidden for preventing from abnormal display & white spot after backpack test, hinge test, twist test or pogo test.b). Antenna cable or WebCam wire bypass panel outline is recommended.c). Interference between panel and system rear-cover is forbidden after reliability test.
