AU OPTRONICS CORPORATION

## 1. Handling Precautions

- 1) Since front polarizer is easily damaged, pay attention not to scratch it.
- 2) Be sure to turn off power supply when inserting or disconnecting from input connector.
- 3) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- 4) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- 5) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface.
- 6) Since CMOS LSI is used in this module, take care of static electricity and insure human earth when handling.
- 7) Do not open nor modify the Module Assembly.
- 8) Do not press the reflector sheet at the back of the module to any directions.
- 9) At the insertion or removal of the Signal Interface Connector, be sure not to rotate nor tilt the Interface Connector of the TFT Module.
- 11)After installation of the TFT Module into an enclosure (Notebook PC Bezel, for example), do not twist nor bend the TFT Module even momentary. At designing the enclosure, it should be taken into consideration that no bending/twisting forces are applied to the TFT Module from outside. Otherwise the TFT Module may be damaged.
- 12) Small amount of materials having no flammability grade is used in the LCD module. The LCD module should be supplied by power complied with requirements of Limited Power Source (IEC60950 or UL1950), or be applied exemption.
- 13) Disconnecting power supply before handling LCD modules, it can prevent electric shock, DO NOT TOUCH the electrode parts, cables, connectors and LED circuit part of TFT module that a LED light bar build in as a light source of back light unit. It can prevent electrostic breakdown.

# 2. General Description

B133EW07 V2 is a Color Active Matrix Liquid Crystal Display composed of a TFT LCD panel, a driver circuit, and LED backlight system. The screen format is intended to support the WXGA (1280(H) x 800(V)) screen and 262k colors (RGB 6-bits data driver) without LED backlight driving circuit. All input signals are LVDS interface compatible.

B133EW07 V2 is designed for a display unit of notebook style personal computer and industrial machine.

## 2.1 General Specification

The following items are characteristics summary on the table at 25  $^{\circ}\mathrm{C}$  condition:

| Items   | Unit    | t Specifications     |  |        |      |  |
|---|---------|----------------------|--|--------|------|--|
| Screen Diagonal   | [mm]    | 337.8 ,13.3W"(13.28) |  |        |      |  |

Note 1: 5 points position (Ref: Active area)

Note 2: 13 points position (Ref: Active area)

Note 3: The luminance uniformity of 5 or 13 points is defined by dividing the maximum luminance values by the minimum test point luminance

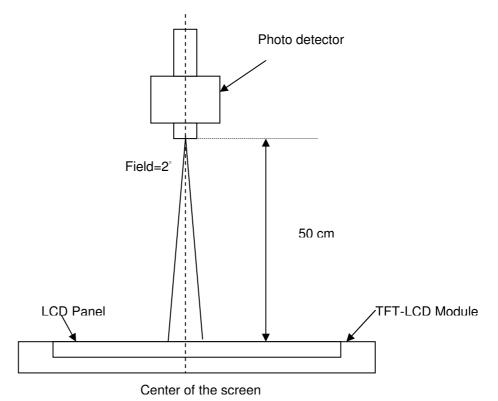

| 2     |     | Maximum Brightness of five points     |
|-------|-----|---------------------------------------|
| δ w5  | = ' | Minimum Brightness of five points     |
| 2     |     | Maximum Brightness of thirteen points |
| δ w13 | =   | Minimum Brightness of thirteen points |

### Note 4: Measurement method

The LCD module should be stabilized at given temperature for 30 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting

Backlight for 30 minutes in a stable, windless and dark room, and it should be measured in the center of screen.

**Note 5**: Definition of Average Luminance of White (Y<sub>L</sub>):

Measure the luminance of gray level 63 at 5 points  $\cdot$   $Y_L = [L(1) + L(2) + L(3) + L(4) + L(5)] / 5$ L (x) is corresponding to the luminance of the point X at Figure in Note (1).

Note 6: Definition of contrast ratio:

Contrast ratio is calculated with the following formula.

Note 7: Definition of Cross Talk (CT)

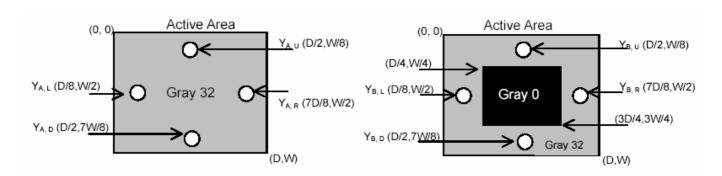

$$CT = |Y_B - Y_A| / Y_A \times 100 (\%)$$

Where

Y<sub>A</sub> = Luminance of measured location without gray level 0 pattern (cd/m<sub>2</sub>)

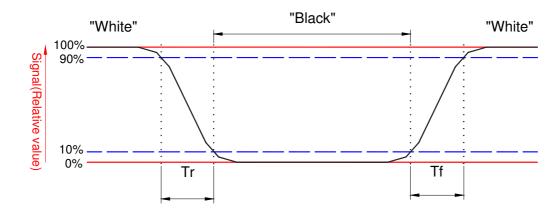

Y<sub>B</sub> = Luminance of measured location with gray level 0 pattern (cd/m<sub>2</sub>)

Note 8: Definition of response time:

The output signals of BM-7 or equivalent are measured when the input signals are changed from "Black" to "White" (falling time) and from "White" to "Black" (rising time), respectively. The response time interval between the 10% and 90% of amplitudes. Refer to figure as below.

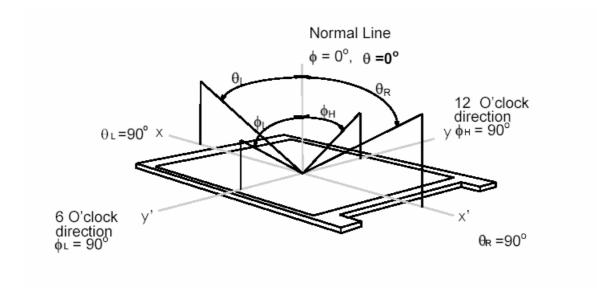

### AU OPTRONICS CORPORATION

### Note 9. Definition of viewing angle

Viewing angle is the measurement of contrast ratio  $\geq$  10, at the screen center, over a 180° horizontal and 180° vertical range (off-normal viewing angles). The 180° viewing angle range is broken down as follows; 90° ( $\theta$ ) horizontal left and right and 90° ( $\Phi$ ) vertical, high (up) and low (down). The measurement direction is typically perpendicular to the display surface with the screen rotated about its center to develop the desired measurement viewing angle.

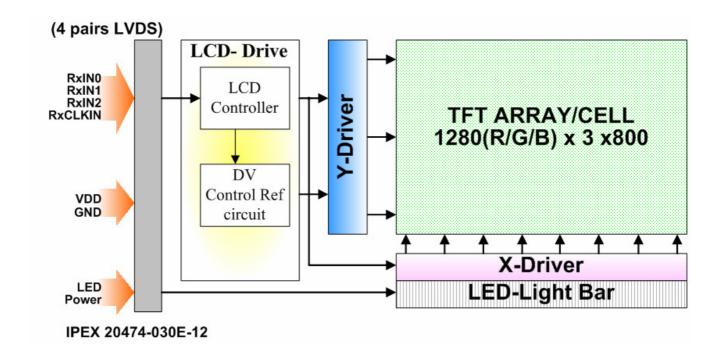

## 3. Functional Block Diagram

The following diagram

ws the functional block of the 13.3 inches wide Color TFT/LCD 30 Pin (One CH/connector Module)

### 4. Absolute Maximum Ratings

An absolute maximum rating of the module is as following:

## 4.1 Absolute Ratings of TFT LCD Module

| Item                    | Symbol | Min  | Max  | Unit   | Conditions |
|-------------------------|--------|------|------|--------|------------|
| Logic/LCD Drive Voltage | Vin    | -0.3 | +4.0 | [Volt] | Note 1,2   |

### 4.2 Absolute Ratings of Environment

Note 1: Maximum Measurement Condition: Black Pattern at 3.3V driving voltage. (P<sub>max</sub>=V<sub>3.3</sub> x I<sub>black</sub>)

Note 2: Measure Condition

Vin rising time

## **5.1.2 Signal Electrical Characteristics**

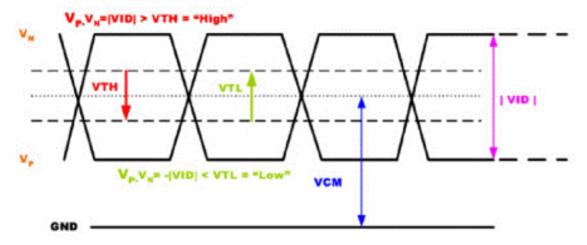

Input signals shall be low or High-impedance state when VDD is off.

Signal electrical characteristics are as follows;

| Parameter       | Condition  | Min  | Max  | Unit |
|-----------------|--|------|------|------|
| V <sub>TH</sub> | Differential Input High<br>Threshold (Vcm=+1.2V) |      | +100 | [mV] |
| V <sub>TL</sub> | Differential Input Low<br>Threshold (Vcm=+1.2V)  | -100 | -    | [mV] |
| V <sub>CM</sub> | Differential Input<br>Common Mode Voltage        | 0.8  | 2.0  | [V]  |

Note: Output signals from any system shall be low or High-impedance state when VDD is off.

# 6.3 Integration Interface and Pin Assignment

### **6.3.1 Connector Description**

Physical interface is described as for the connector on module.

These connectors are capable of accommodating the following signals and will be following components.

| Connector Name / Designation | For Signal Connector             |
|------------------------------|----------------------------------|
| Manufacturer                 | IPEX or compatible               |
| Type / Part Number           | IPEX 20474-030E-12 or compatible |
| Mating Housing/Part Number   | IPEX 20472-030E-12 or compatible |

### 6.3.2 Pin Assignment

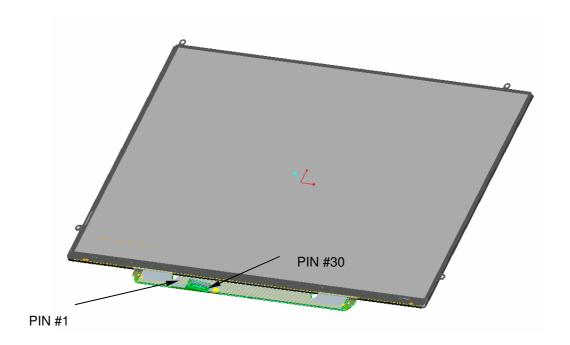

LVDS is a differential signal technology for LCD interface and high speed data transfer device.

| Pin | Symbol               | Description              |  |  |
|-----|----------------------|--------------------------|--|--|
| 1   | GND                  | Ground                   |  |  |
| 2   | Vcc                  | Power Supply (+3.3V)     |  |  |
| 3   | V <sub>analog</sub>  | Power Supply (+3.3V)     |  |  |
| 4   | $ m V_{EDID}$        | DDC Power +3.3V          |  |  |
| 5   | Vsync                | Vsync                    |  |  |
| 6   | Clk <sub>EDID</sub>  | DDC Clock                |  |  |

|               | Vertical Active Period        | $T_{ m VD}$        | 800  | 800   | 800  | $T_{\mathrm{H}}$ | Display Period              |

Note: (1) When the WXGA+ controller sets DE Mode, and  $H_{sync}$  and  $V_{sync}$  are required. The duration of DE (DTMG) signal must be longer than 1 clock period ( $T_C$ ) at every horizontal sync period;

- (2) Horizontal Period = One Line Scanning Time;
- (3) The vertical period T<sub>V</sub> is related to the frame frequency f<sub>V</sub>, *i.e.*, 60 Hz.

## 6.4.2 Timing diagram

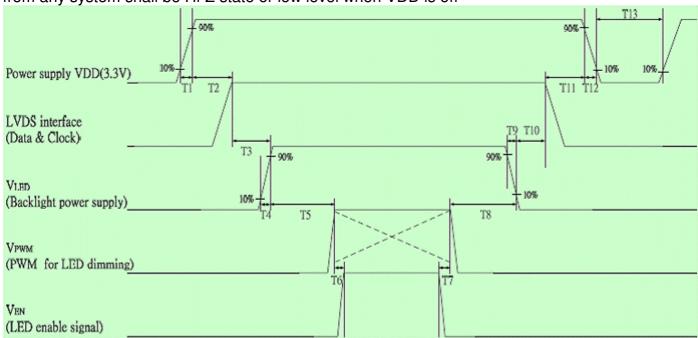

AU OPTRONICS CORPORATION

### 6.4.3 Power ON/OFF Sequence

VDD power on/off sequence is as follows. Interface signals are also shown in the chart. Signals from any system shall be Hi-Z state or low level when VDD is off

### **Power Sequence Timing**

|           |      | Value |      |       |
|-----------|------|-------|------|-------|
| Parameter | Min. | Тур.  | Max. | Units |
| T1        | 0.5  | -     | 10   |       |
| T2        | 0    | -     | 50   |       |
| Т3        | 200  | -     | -    |       |
| T4        | 0.5  | -     | 10   |       |
| Т5        | 10   | -     | -    |       |
| Т6        | 10   | -     | -    |       |
| Т7        | 0    | -     | -    | ms    |
| Т8        | 10   | -     | -    |       |
| Т9        | 0    | -     | 10   |       |
| T10       | 200  | -     | -    |       |
| T11       | 0.5  | -     | 50   |       |
| T12       | 0    | -     | 10   |       |
| T13       | 400  |       | -    |       |

### 7. Vibration and Shock Test

## 7.1 Vibration Test

**Test Spec:** 

Test method: Non-Operation

Acceleration: 3 G

Frequency: 5 - 150Hz Random

30 Minutes each Axis (X, Y, Z) Sweep:

## 7.2 Shock Test Spec:

**Test Spec:** 

Test method: Non-Operation

Acceleration: 220 G, Half sine wave

Active time: 2 ms

Pulse: X,Y,Z .one time for each side

## 7.3 Reliability Test

| Items                         | Required Condition                            | Note   |
|-------------------------------|---|--------|
| Temperature<br>Humidity Bias  | Ta= 50℃, 90%RH, 240h                          |        |
| High Temperature<br>Operation | Ta= 50℃, 500h                                 |        |
| Low Temperature<br>Operation  | Ta= 0℃, 500h                                  |        |
| High Temperature<br>Storage   | Ta= 65℃, 500h                                 |        |
| Low Temperature<br>Storage    | Ta= -25℃, 500h                                |        |
| Thermal Shock<br>Test         | Ta=-25℃to 65℃, 5min transfer time, 100 cycles |        |
| ESD                           | Contact : ±8 KV                               | Note 1 |
|                               | Air: ±15 KV                                   |        |

Note1: According to EN 61000-4-2, ESD class B: Some performance degradation allowed. No data lost

. Self-recoverable. No hardware failures.

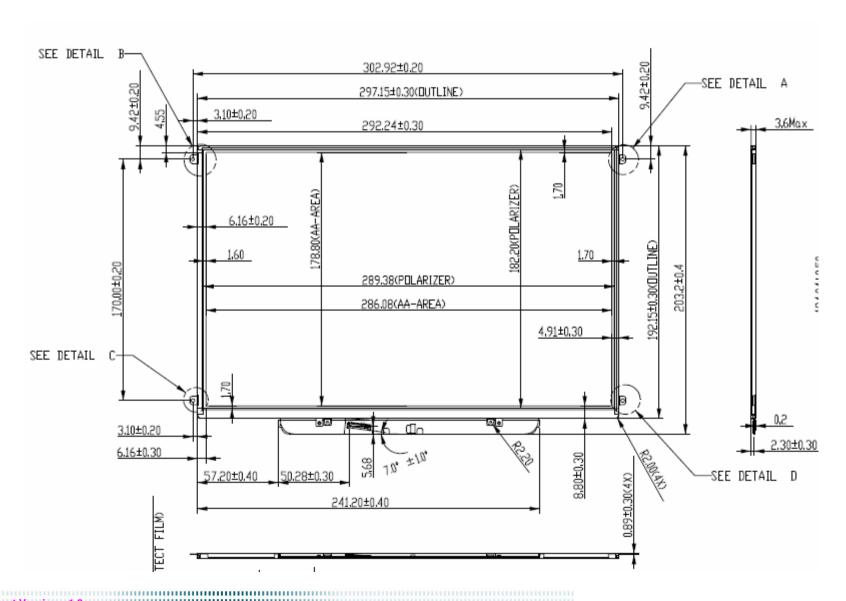

Remark: MTBF (Excluding the LED): 30,000 hours with a confidence level 90%
