1. Operating Precautions

- 1) Since front polarizer is easily damaged, please be cautious and not to scratch it.
- 2) Be sure to turn off power supply when inserting or disconnecting from input connector.
- Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- 4) When the panel surface is soiled, wipe it with absorbent cotton or soft cloth.
- 5) Since the panel is made of glass, it may be broken or cracked if dropped or bumped on hard surface.
- 6) Since CMOS LSI is used in this module, take care of static electricity and insure human earth when handling.
- 7) Do not open nor modify the module assembly.
- 8) Do not press the reflector sheet at the back of the module to any direction.
- 9) In case if a module has to be put back into the packing container slot after it was taken out from the container, do not press the center of the LED Reflector edge. Instead, press at the far ends of the LED Reflector edge softly. Otherwise the TFT Module may be damaged.
- 10) At the insertion or removal of the Signal Interface Connector, be sure not to rotate nor tilt the Interface Connector of the TFT Module.
- 11) TFT-LCD Module is not allowed to be twisted & bent even force is added on module in a very short time. Please design your display product well to avoid external force applying to module by end-user directly.
- 12) Small amount of materials without flammability grade are used in the TFT-LCD module. The TFT-LCD module should be supplied by power complied with requirements of Limited Power Source (IEC60950-1 or UL60950-1), or be applied exemption.
- 13) Severe temperature condition may result in different luminance, response time.
- 14) Continuous operating TFT-LCD Module under high temperature environment may accelerate LED light bar exhaustion and reduce luminance dramatically.
- 15) The data on this specification sheet is applicable when TFT-LCD module is placed in landscape position.
- 16) Continuous displaying fixed pattern may induce image sticking. It's recommended to use screen saver or moving content periodically if fixed pattern is displayed on the screen.

2. General Description

G156XTN02.0 is a Color Active Matrix Liquid Crystal Display composed of a TFT-LCD display, a driver circuit, and LED backlight system. The screen format is intended to support 16:9 HD, 1366(H) x768(V) screen and 262k colors (RGB 6-bits data driver) with LED backlight driving circuit. All input signals are eDP (Embedded DisplayPort) interface compatible. G156XTN02.0 is designed for a display unit of notebook style personal computer and industrial machine.

2.1 Display Characteristics

The following items are characteristics summary on the table under 25°C condition:

Note 1: 5 points position (Ref: Active area)

Note 2: 13 points position (Ref: Active area)

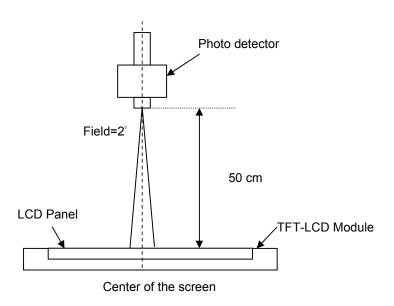

Note 3: The luminance uniformity of 5 or 13 points is defined by dividing the maximum luminance values by the minimum test point luminance

| | Maximum Brightness of five points |
|-------------------|---------------------------------------|
| δ _{W5} = | Minimum Brightness of five points |
| 2 - 2 | Maximum Brightness of thirteen points |
| $\delta_{W13} =$ | Minimum Brightness of thirteen points |

AU OPTRONICS CORPORATION

Note 4: Measurement method

The LCD module should be stabilized at given temperature for 30 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting Backlight for 30 minutes in a stable, windless and dark room, and it should be measured in the center of screen.

Note 5: Definition of Average Luminance of White (Y_L):

Measure the luminance of gray level 63 at 5 points $Y_L = [L(1) + L(2) + L(3) + L(4) + L(5)] / 5$ L (x) is corresponding to the luminance of the point X at Figure in Note (1).

Note 6: Definition of contrast ratio (CR): Contrast ratio is calculated with the following formula.

Contrast ratio (CR)= $\frac{\text{Brightness on the "White" state}}{\text{Brightness on the "Black" state}}$

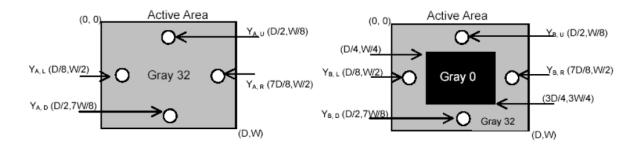

Note 7: Definition of Cross Talk (CT)

$$CT = |Y_B - Y_A| / Y_A \times 100 (\%)$$

Where

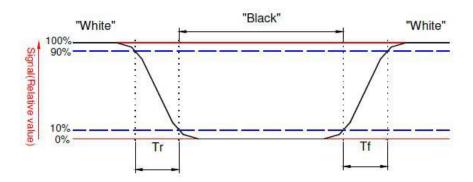

Y_A = Luminance of measured location without gray level 0 pattern (cd/m2)

Y_B = Luminance of measured location with gray level 0 pattern (cd/m2)

Note 8: Definition of response time:

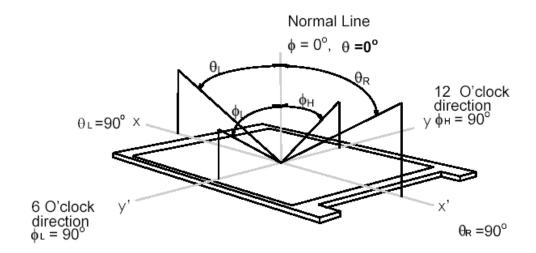

The output signals of BM-7 or equivalent are measured when the input signals are changed from "Black" to "White" (falling time) and from "White" to "Black" (rising time), respectively. The response time interval between the 10% and 90% of amplitudes. Refer to figure as below.

AU OPTRONICS CORPORATION

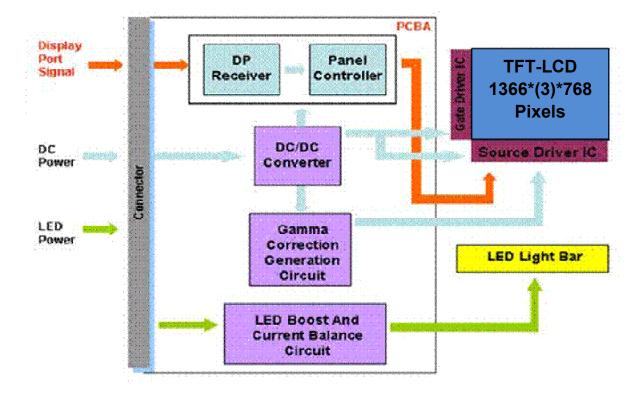

Note 9: Definition of viewing angle

Viewing angle is the measurement of contrast ratio \geq 10, at the screen center, over a 180° horizontal and 180° vertical range (off-normal viewing angles). The 180° viewing angle range is broken down as below: 90° (θ) horizontal left and right, and 90° (Φ) vertical high (up) and low (down). The measurement direction is typically perpendicular to the display surface with the screen rotated to its center to develop the desired measurement viewing angle.

6.3 Interface Timing

6.3.1 Timing Characteristics

Basically, interface timings should match the 1366x768 /60Hz manufacturing guide line timing.

| Parai | meter | Symbol | Min. | Тур. | Max. | Unit |

Display Port panel power sequence timing parameter:

| Timing | Description | Dond bu | Limits | | | Notes |
|-----------|----------------------------------------------------------------|----------|--------|------|-------|-----------------------------------------------------------------------------------------|
| parameter | Description | Reqd. by | Min. | Тур. | Max. | Notes |
| T1 | power rail rise time, 10% to 90% | source | 0.5ms | | 10ms | |
| Т2 | delay from LCDVDD to black video generation | sink | 0ms | | 200ms | prevents display noise until valid video data is received from the source |
| Т3 | delay from LCDVDD to HPD high | sink | 0ms | | 200ms | sink AUX_CH must be operational upon HPD high. |
| Т4 | delay from HPD high to link training initialization | source | | | | allows for source to read link capability and initialize. |
| Т5 | link training duration | source | | | | dependant on source link to read training protocol. |
| Т6 | link idle | source | | | | Min accounts for required BS-Idle pattern. Max allows for source frame synchronization. |
| Т7 | delay from valid video data from source to video on display | sink | 0ms | | 50ms | max allows sink validate video data and timing. |
| Т8 | delay from valid video data from source to backlight enable | source | | | | source must assure display video is stable. |
| Т9 | delay from backlight disable to end of valid video data | source | | | | source must assure backlight is no longer illuminated. |
| T10 | delay from end of valid video data from source to power off | source | 0ms | | 500ms | |
| T11 | power rail fall time, 905 to 10% | source | | | 10ms | |
| T12 | power off time | source | 150ms | | | |

Note1: The sink must include the ability to generate black video autonomously. The sink must automatically enable black video under the following conditions:

-upon LCDVDD power on (with in T2 max)-when the "Novideostream_Flag" (VB-ID Bit 3) is received from the source (at the end of T9).

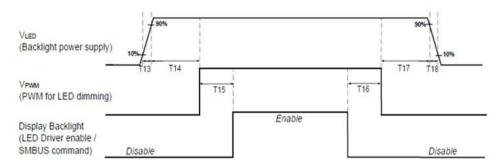

-when no main link data, or invalid video data, is received from the source. Black video must be displayed within 64ms (typ) from the start of either condition. Video data can be deemed invalid based on MSA and timing information, for example.

Note 2: The sink may implement the ability to disable the black video function, as described in Note 1, above, for system development and debugging purpose.

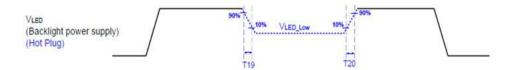

Note 3: The sink must support AUX CH polling by the source immediately following LCDVDD power on without causing damage to the sink device (the source can re-try if the sink is not ready). The sink must be able to respond to an AUX_CH transaction with the time specified within T3 max.

Note1: According to EN 61000-4-2, ESD class B: Some performance degradation allowed. Self-recoverable. No data lost, No hardware failures. Mura shall be ignored after high temperature reliability test.

Note2:

- Water condensation is not allowed for each test items.
- Each test is done by new TFT-LCD module. Don't use the same TFT-LCD module repeatedly for reliability
- The reliability test is performed only to examine the TFT-LCD module capability. No function failure occurs. Mura shall be ignored after high temperature reliability test.
- To inspect TFT-LCD module after reliability test, please store it at room temperature and room humidity for 24 hours at least in advance.

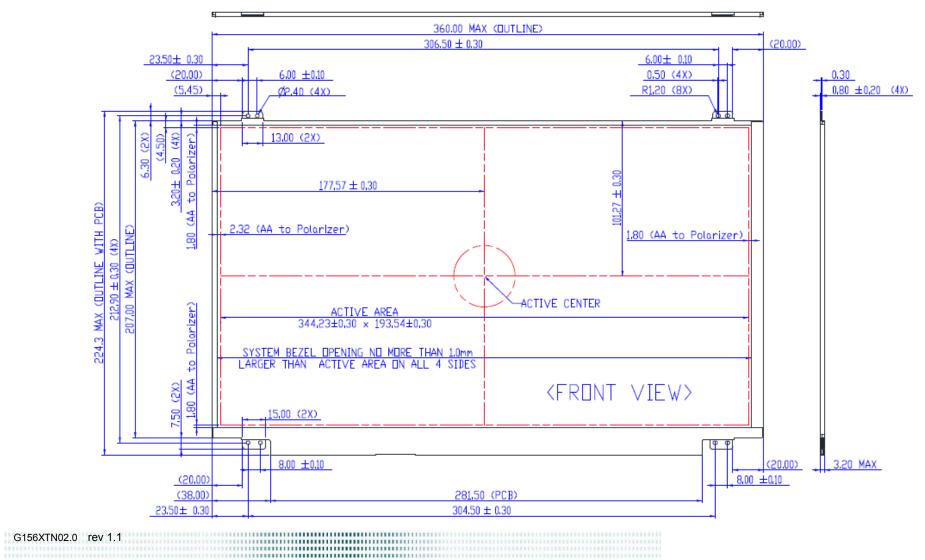

Remark: MTBF (Excluding the LED): 30,000 hours with a confidence level 90%

9.3 Handling guide

This is a thin and slim LCD model, and please be cautious when pulling it out of package or assembling it onto platform. Careless handlings, e.g. twist, bending, pressing, or collision, will result malfunction of LCD models.

(1) Handling method notice

Do not lift and hold the panel with single hand at right or left side from Tray.

Lift and hold the panel up with both hands from tray.

(2) On the table notice

Do not press edge of panel to avoid glass broken.

Do not press the surface of the panel to avoid the glass broken or polarizer scratch.

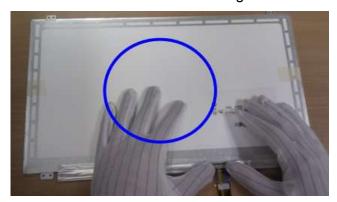

Do not put anything or tool on the panel to avoid the glass broken or polarizer scratch.

(3) Cable assembly notice

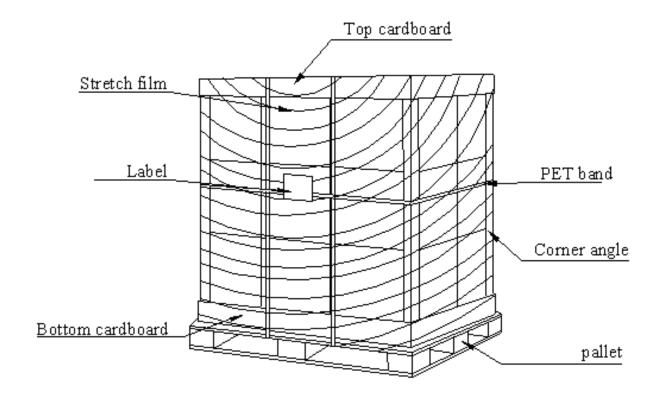

Do not insert the connector with single hand and touching the PCBA.

Insert the connector by pushing right and left edge.

11. Safety

11.1 Sharp Edge Requirements

There will be no sharp edges or comers on the display assembly that could cause injury.

11.2 Materials

11.2.1 Toxicity

There will be no carcinogenic materials used anywhere in the display module. If toxic materials are used, they will be reviewed and approved by the responsible AUO toxicologist.

11.2.2 Flammability

All components including electrical components that do not meet the flammability grade UL94-V1 in the module will complete the flammability rating exception approval process.

The printed circuit board will be made from material rated 94-V1 or better. The actual UL flammability rating will be printed on the printed circuit board.

11.3 Capacitors

If any polarized capacitors are used in the display assembly, provisions will be made to keep them from being inserted backwards.

11.4 National Test Lab Requirement

The display module will satisfy all requirements for compliance to:
