#### 1. General Description

ED060XH7 is a reflective electrophoretic E Ink® technology display module based on active matrix TFT substrate featuring capacitive touch panel with front light . It has 6" active area with 758 x 1024 pixels, the display is capable to display images at 2-16 gray levels (1-4 bits) depending on the display controller and the associated waveform file it used.

#### 2. Features

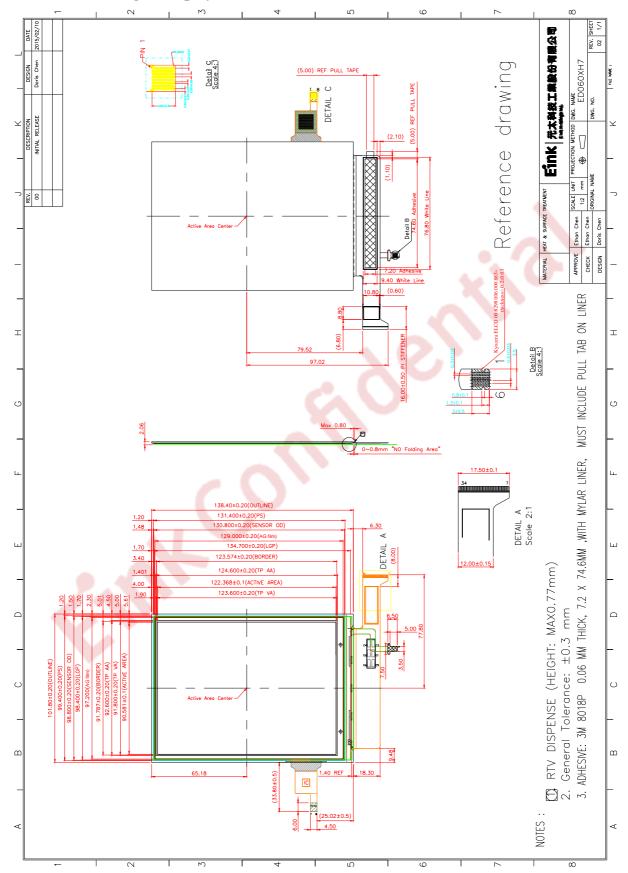

- Carta High contrast reflective/electrophoretic technology
- > 758 x 1024 dots resolution
- ➤ High reflectance
- > Ultra wide viewing angle
- Ultra low power consumption
- > Pure reflective mode
- ➤ Bi-stable
- Commercial temperature range
- Landscape, portrait mode
- Capacitive touch with film type
- > Front light module

3. Mechanical Specifications

Parameter	Specifications	Unit	Remark
Screen Size	6.0 (3:4 diagonal)	Inch	
Display Resolution	758 (H)×1024(V)	Pixel	
Active Area	90.581 (H)×122.368 (V)	mm

Storage temperature			-25	-	70	$^{\circ}\!\mathbb{C}$

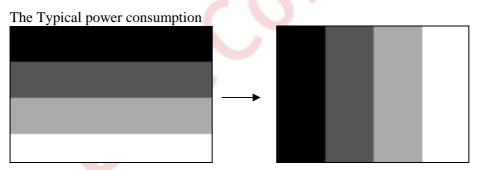

- The maximum power consumption is measured using 85Hz waveform with following pattern transition: from pattern of repeated 1 consecutive black scan lines followed by 1 consecutive white scan line to that of repeated 1 consecutive white scan lines followed by 1 consecutive black scan lines. (Note 7-1)
- The Typical power consumption is measured using 85Hz waveform with following pattern transition: from horizontal 4 gray scale pattern to vertical 4 gray scale pattern. (Note 7-2)
- The standby power is the consumed power when the panel controller is in standby mode.
- The listed electrical/optical characteristics are only guaranteed under the controller & waveform provided by E Ink.
- Vcom is recommended to be set in the range of assigned value  $\pm$  0.1V.
- The maximum I<sub>COM</sub> inrush current is about 600 mA

#### Note 7-1

#### Note7-2

#### 7-3) Recommended driving condition for Front light

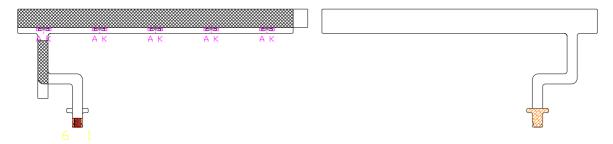

GND = 0 V,  $Ta = 25^{\circ}C$ 

Parameter	Symbol	Min	TYP	MAX	Unit	Remark

## OUTPUT LATCH CONTROL SIGNALS

#### **CLOCK & DATA TIMING**

ED060XH7

Note: First gate line on timing

After 5CKV, gate line is on.

MODE1

Gout1

SPV

# 7-5 ) Controller Timing

This timing mode is depicted on Figure 1 and Figure 2 and it refers to timing of Source Driver Output Enable (SDOE) and Gate Driver Clock (GDCK). Note, that in this mode LGON follows GDCK timing.

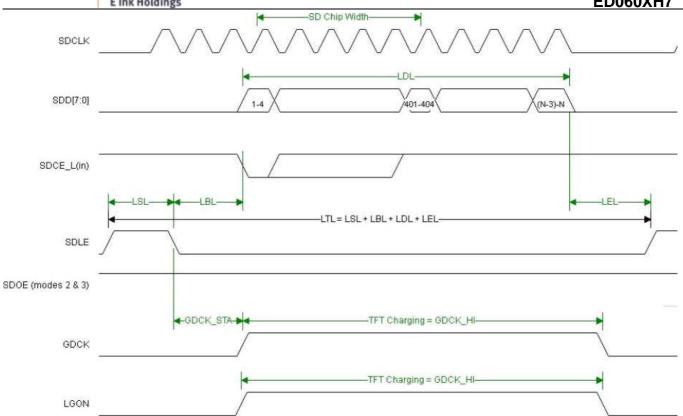

Figure 1 Line Timing in Mode 3

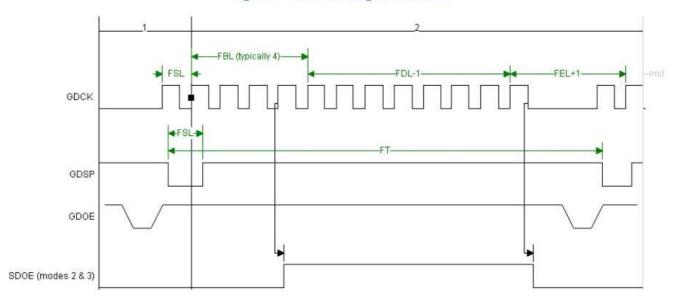

Figure 2 Frame Timing in Mode 3

#### **Table Timing Parameters Table**

Mode	3			Resolution			
SDCK [MHz]	20		1024x758				
Pixels Per SDCK	4						
Line	LSL	LBL	LDL	LEL	GDCK_STA	LGONL	
Parameters[SDCK]	6	6	256	38	4	262	
Line	-	-	-	•	-	-	
Parameters[us]	0.3	0.3	12.8	1.9	0.2	13.10	
Frame	FSL	FBL	FDL	FEL	-	FR [Hz]	
Parameters [lines]	2	4	758	5	-	84.99	
Frame					-	-	
Parameters [us]	30.60	61.20	11597.4	76.50	-	-	

Note 1: For parameters definition, see Section 6. Active Matrix Electronic Paper Display Timings

Note 2: For Isis Controller GDCK\_STA and LGONL are not settable parameters; GDCK\_STA = LBL, LGONL = LDL+0.5

Note 3: For Freescale SoC GDOE Low pulse represent FSL and GDSP pulses with the first period of FBL

#### Note 4:

SDCLK = XCL

 $SDD[7:0] = D0 \sim D7$ 

 $SDCE_L(in) = XSTL$ 

GDCK = CKV

GDSP = SPV

GDOE = Mode 1

SDOE = XOE

7-6). Refresh Rate

The module ED060XH7 is applied at a maximum screen refresh rate of 85Hz.

	Min	Max
Refresh Rate	-	85Hz

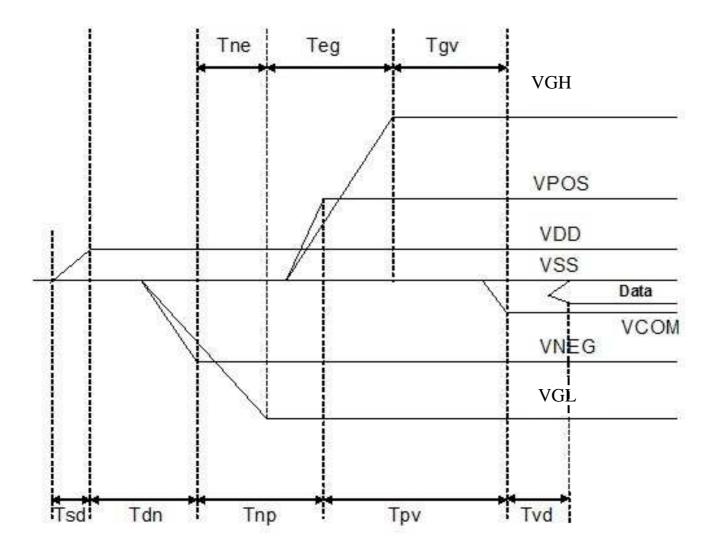

#### **8.Power Sequence**

Power Rails must be sequenced in the following order:

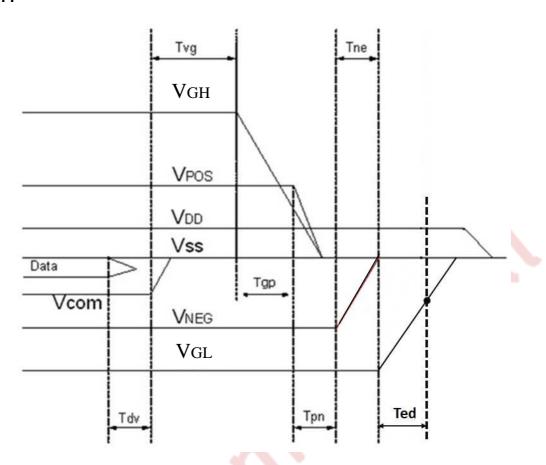

- 1. VSS → VDD → VNEG → VPOS (Source driver) → VCOM
- 2. VSS → VDD → VGL → VGH (Gate driver)

# **POWER ON**

	Min	Max
Tsd	30us	-
Tdn	100us	-
Tnp	1000us	-
Tpv	100us	-
Tvd	100us	-
Tne	0us	•
Teg	1000us	
Tgv	100us	-

#### **POWER OFF**

_	Min	Max
Tdv	$100\mu\mathrm{s}$	-
Tvg	$0 \mu\mathrm{s}$	-
Tgp	0 μ s	-
Tpn	$0 \mu\mathrm{s}$	-
Tne	0 μ s	-
Ted	0.5 s	Discharged point @ -7.4 Volt

Note8-1: Supply voltages decay through pull-down resistors

Note8-2: Begin to turn off VGL power after VNEG and VPOS are completely or almost discharged to GND state.

Note8-3: VGL must remain negative of Vcom during decay period

#### 9. Optical characteristics

#### 9-1) Specifications

Measurements are made by PR655 with MS-75 or equivalent SepctaScan Colorimeter with that the illumination is at an angle 45° from the perpendicular at the center of sample surface, and the detector is perpendicular unless otherwise specified.

 $T = 25^{\circ}C$ 

Symbol	Parameter Conditions		Min	Тур.	Max	Unit	Note

Note 9-1: Luminance meter: Eye – One Pro Spectrophotometer

#### 9-2) Definition of contrast ratio

The contrast ratio (CR) is the ratio between the reflectance in a full white area (Rl) and the reflectance in a dark area (Rd):

CR = R1/Rd

#### 9-3) Reflection Ratio

The reflection ratio is expressed as:

 $R = Reflectance Factor_{white board} \quad x \quad (L_{center} / L_{white board})$ 

 $L_{center}$  is the luminance measured at center in a white area (R=G=B=1).  $L_{white\ board}$  is the luminance of a standard white board. Both are measured with equivalent illumination source. The viewing angle shall be no more than 2 degrees.

9-4)Optical characteristics are determined after the front light has been 'ON' and stable for approximately 60 minutes in a dark environment at  $25^{\circ}$ C. The values specified are at an approximate distance 50cm from the EPD display surface at a viewing angle of  $\Phi$  and  $\theta$  equal to  $0^{\circ}$ .

The typical luminance value is measured at LED current 20 mA.

**9-5**) The uniformity is defined as

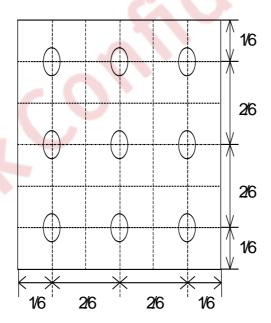

U = The Minimum Brightness of the 9 testing Points

The Maximum Brightness of the 9 testing Points

Ambient illumination : < 1 Lux

Measuring direction: Perpendicular to the surface of module

The test pattern is white

9-6) Definition of contrast ratio for Front light on mode

Luminance when Testing point is White

 $CR = \frac{1}{\text{Luminance when Testing point is Black}}$ 

#### 10.HANDLING, SAFETY AND ENVIRONMENTAL REQUIREMENTS AND REMARK

#### **WARNING**

The display glass may break when it is dropped or bumped on a hard surface. Handle with care. Should the display break, do not touch the electrophoretic material. In case of contact with electrophoretic material, wash with water and soap.

#### **CAUTION**

The display module should not be exposed to harmful gases, such as acid and alkali gases, which corrode electronic components.

Disassembling the display module can cause permanent damage and invalidate the warranty agreements.

IPA solvent can only be applied on active area and the back of a glass. For the rest part, it is not allowed.

# **Mounting Precautions**

- (1) It's recommended that you consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module.
- (2) It's recommended that you attach a transparent protective plate to the surface in order to protect the EPD. Transparent protective plate should have sufficient strength in order to resist external force.
- (3) You should adopt radiation structure to satisfy the temperature specification.
- (4) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the PS at high temperature and the latter causes circuit break by electro-chemical reaction.
- (5) Do not touch, push or rub the exposed PS with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of PS for bare hand or greasy cloth. (Some cosmetics deteriorate the PS)
- (6) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach the PS. Do not use acetone, toluene and alcohol because they cause chemical damage to the PS.
- (7) Wipe off saliva or water drops as soon as possible. Their long time contact with PS causes deformations and color fading.

Data sheet status	
Product	This data sheet contains preliminary product specifications.
specification	

## **Limiting values**

Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

## **Application information**

Where application information is given, it is advisory and does not form part of the specification.

#### **REMARK**

All The specifications listed in this document are guaranteed for module only. Post-assembled operation or component(s) may impact module performance or cause unexpected effect or damage and therefore listed specifications is not warranted after any Post-assembled operation.

11. Reliability test

	TEST	CONDITION	METHOD	REMARK
1	High-Temperature Operation	T = +50℃, RH = 30% for 240 hrs	IEC 60 068-2-2Bp	
2	Low-Temperature Operation	T = 0℃ for 240 hrs	IEC 60 068-2-2Ab	
3	High Temperature, Storage	T = +60°C, RH=26% for 240hrs Test in white pattern	IEC 60 068-2-3CA	
4	Low-Temperature Storage	T = -25℃ for 240 hrs Test in white pattern	IEC 60 068-2-1Ab
