MDBU Marketing Division / AU Optronics corporation

These specification sheets are the proprietary product of AUO and include materials protected under copyright of AUO. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of AUO.

The device listed in these technical literature sheets was designed and manufactured for use in OA equipment.

In case of using the device for applications such as control and safety equipment for transportation (aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.

Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment (trunk lines), nuclear power control equipment and medical or other equipment for life support.

AUO assumes no responsibility for any damage resulting from the use of the device, which does not comply with the instructions, and the precautions specified in these technical literature sheets.

Contact and consult with a AUO sales representative for any questions about this device.

1. Application

This specification applies to a color TFT-LCD module, QD15TL0701.

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel; driver ICs, control circuit and power supply circuit and a backlight unit. Graphics and texts can be displayed on a $1280 \times 3 \times 800$ dots panel with 262,144 colors by using LVDS (<u>Low Voltage Differential Signaling</u>) to interface and supplying +3.3V DC supply voltage for TFT-LCD panel driving and supply voltage for backlight.

The TFT-LCD panel used for this module has very high aperture ratio. A low-reflection and higher-color-saturation type color filter is also used for this panel. Therefore, high-brightness and high-contrast image, which is suitable for the multimedia use, can be obtained by using this module.

Optimum viewing direction is 6 o'clock.

[Features]

- 1) High aperture panel; high-brightness or low power consumption.
- 2) Brilliant and high contrast image.
- 3) Small footprint and thin shape.
- 4) Light weight.
- 5) Wide Screen 15.4" WXGA
- 6) RoHs compliant

3. General Specifications

Parameter	Specifications	Unit
Display size	390.1 (15.4") Diagonal	mm
Active area	331.2×207.0	mm
Pixel format	1280 (H)×800 (V)	Pixel
	(1 pixel = R+G+B dots)	
Pixel pitch	0.2588(H) × 0.2588 (V)	mm
Pixel configuration	R, G, B vertical stripe	
Display mode	Normally white	
Unit outline dimensions (typ.)*1	344.0(W)×222.0 (H)×6.5(T)max.	mm
Mass	585 max.	g
Surface treatment	Non Glare + Hard Coating 3H	

^{*1.}Note: excluding backlight cables. Outline dimensions are shown in this specification.

4. Input Terminals

4-1. TFT-LCD panel driving

CN1 (1 channel, LVDS signals – NSC/Ti standard and +3.3V DC power supply)
Using connector: FI-XB30Sx-HFxx/FI-X30Sx-HFxx/equivalent (JAE)

Interface Cable Pin Assignments

PIN NO	. SYMBOL	FUNCTION
1	vss	Ground
2	VDD	Power Supply, 3.3 V (typical)
3	VDD	Power Supply, 3.3 V (typical)
4	V EEDID	DDC 3.3V power
5	NC	Reserved for supplier test point
6	CIk EEDID	DDC Clock
7	DATA EEDID	DDC Data
8	Rin0-	- LVDS differential data input (R0-R5, G0) (odd pixels)
9	Rin0+	+ LVDS differential data input (R0-R5, G0) (odd pixels)
10	vss	Ground
11	Rin1-	- LVDS differential data input (G1-G5, B0-B1) (odd pixels)
12	Rin1+	+ LVDS differential data input (G1-G5, B0-B1) (odd pixels)
13	vss	Ground
14	Rin2-	- LVDS differential data input (B2-B5, HS, VS, DE) (odd pixels)
15	Rin2+	+ LVDS differential data input (B2-B5, HS, VS, DE) (odd pixels)
16	vss	Ground
17	CIkIN-	- LVDS differential clock input (odd pixels)
18	CIkIN+	+ LVDS differential clock input (odd pixels)
19	vss	Ground

29	NC	No connect
30	NC	No connect

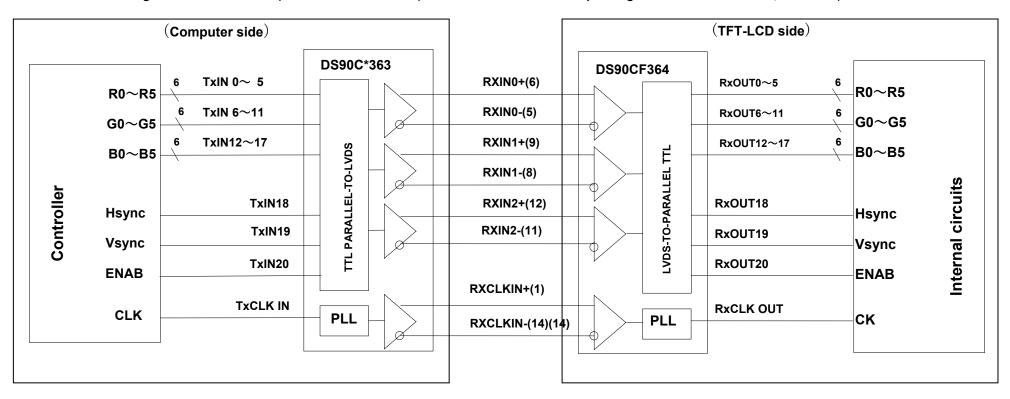

[Note 1] Relation between LVDS signals and actual data shows below section (4-2).

[Note 2] The shielding case is connected with signal GND.

4-2 Interface block diagram

Using receiver: DS90CF364(National semiconductor)

Corresponding Transmitter: DS90C363,DS90C383(National semiconductor)

4-3. Backlight driving

CN2: BHSR-02VS-1(JST)

Mating connector: SM02B-BHSS-1-TB (JST) or 87210-0200

Pin No.	Symbol	Function
1	V_{HIGH}	Power supply for lamp
		(High voltage side)
2	V_{LOW}	Power supply for lamp
		(Low voltage side)

5. Absolute Maximum Ratings

5-1 LCD module

Parameter	Symbol	Condition	Ratings	Unit	Remark
Input voltage	VI	Ta=25℃	$-0.3 \sim \text{VDD+0.3}$	V	[Note1]
+3.3V supply voltage	VDD	Ta=25℃	0 ~ + 4	V	
Storage temperature	Tstg	_	$-25 \sim +60$	${\mathcal C}$	[Note2]
Operating temperature	Тора	_	0 ~ +50	${\mathcal C}$	
(Ambient)	_				

[Note1] LVDS signals

[Note2] Humidity: 95%RH Max. at Ta≤40°C.

Maximum wet-bulb temperature at 39°C or less at Ta>40°C.

No condensation.

6. Electrical Characteristics

6-1.TFT-LCD panel driving

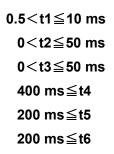

Ta=25℃

	1 202 paner anning							
Parameter			Symbol	Min.	Тур.	Max.	Unit	Remark
VDD	Supply voltag	е	VDD	+3.0	+3.3	+3.6	V	[Note2]

							input	
Rush current		I _{RUSH}			1.5	Α	Rise time	
								470uS

[Note1] V_{CM} : Common mode voltage of LVDS driver.

[Note2]

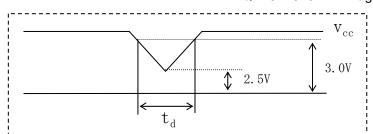

On-off conditions for supply voltage

Vcc-dip conditions

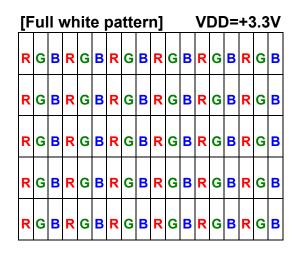

1) 2.5 V≦Vcc<3.0 V td≦10 ms

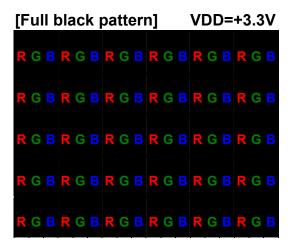

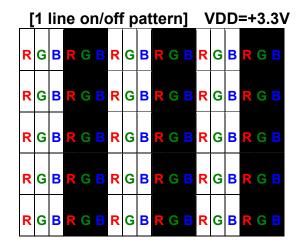

2) Vcc<2.5 V

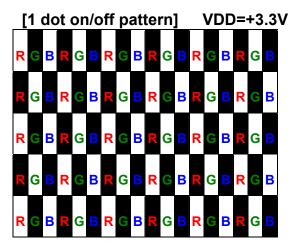

Vcc-dip conditions should also follow the On-off conditions for supply voltage

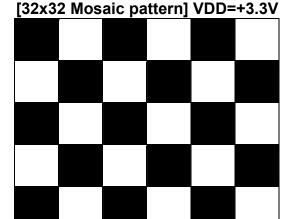

[Note3] Test pattern of current dissipation

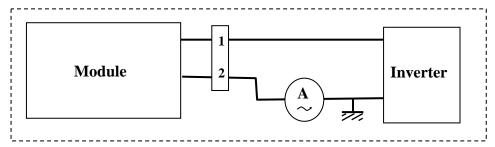

6-2. Backlight driving

The backlight system is an edge-lighting type with single CCFT (Cold Cathode Fluorescent Tube).

The characteristics of the lamp are shown in the following table.

Parameter	Symbol	Min.	Тур.	Max.	Unit	Remark
Lamp current range	ΙL	3.0	6.0	6.5	mArms	[Note1]
Lamp voltage	V _L	657	730	803	Vrms	
Lamp power	PL	_	4.38	_	W	I _L =6.0mA [Note2]
consumption						
Lamp frequency	F∟	54	60	66	kHz	[Note3]
Kick-off voltage	Vs	_	_	1460	Vrms	Ta=25℃
		_	_	1650	Vrms	Ta=0℃ 【Note4】
Lamp life time	LL	15000	_	_	hour	[Note5]

[Note1] Lamp current is measured with current meter for high frequency as shown below.

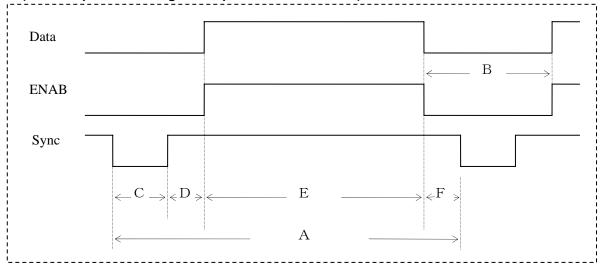

- [Note2] Calculated Value for reference ($I_L \times V_L$)
- [Note3] Lamp frequency may produce interference with horizontal synchronous frequency, and this may cause beat on the display. Therefore lamp frequency shall be detached as much as possible from the horizontal synchronous frequency and from the harmonics of horizontal synchronous to avoid interference.
- [Note4] The voltage above this value should be applied to the lamp for more than 1 second to start-up. Otherwise the lamp may not be turned on.
- [Note5] Lamp life time is defined as the time when either ① or ② occurs in the continuous operation under the condition of Ta = 25° C and IL = 6.0 mArms.
 - ① Brightness becomes 50 % of the original value under standard condition.
 - ② Kick-off voltage at Ta = 0° C exceeds maximum value.
- (Note) The performance of the backlight, for example life time or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp. When you design or order the inverter, please make sure that a poor lighting caused by the mismatch of the backlight and the inverter (miss-lighting, flicker, etc.) never occur. When you confirm it, the module should be operated in the same condition as it is installed in your instrument.

7. Timing characteristics of LCD module input signals

7-1. Timing characteristics

(This is specified at digital outputs of LVDS driver.)

Each basic color can be displayed in 64 gray scales from 6 bit data signals. According to the combination of total 18 bit data signals, the 262,144-color display can be achieved on the screen.

9. EDID data structure

This is the EDID (Extended Display Identification Data) data format to support displays as defined in the

VESA Plug & Display.

Blue		By		0.099	0.129	0.159		
Luminance of white		Y L 2	center	185	200	_	Cd/m	IL = 6.0
[N	[Note5]						2	mArms
								$F_L=55kHz$
White l	Uniformity	δW	5 Points	_	_	1.3		[Note5]

The optical characteristics shall be measured in a dark room or equivalent state with the method shown in Fig.3.

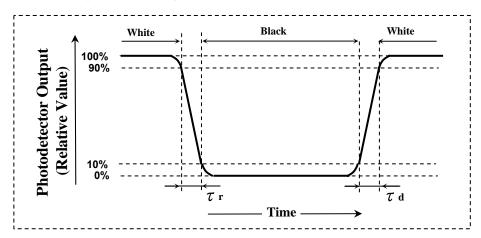

[Note2] Definition of contrast ratio:

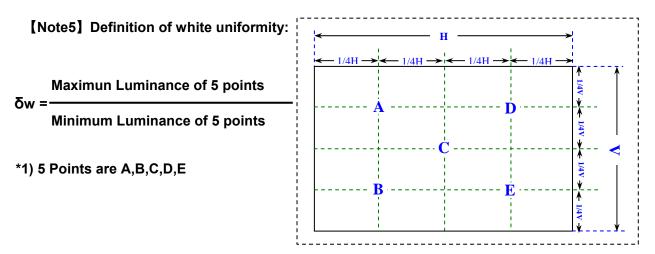

The contrast ratio is defined as the following.

[Note3] Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

[Note4] This shall be measured at center of the screen.

The display quality of the color TFT-LCD module shall be in compliance with the Incoming

Inspection Standard.

12. Handling Precautions

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.
- b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- c) Since the front polarizer is easily damaged, pay attention not to scratch it.
- d) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- g) Since CMOS LSI is used in this module, take care of static electricity and injure the human earth when handling.
- h) Observe all other precautionary requirements in handling components.
- i) This module has its circuitry PCBs on the rear side and should be handled carefully in order not to be stressed.
- j) Laminated film is attached to the module surface to prevent it from being scratched. Peel the film off slowly just before the use with strict attention to electrostatic charges. Ionized air shall be blown over during the action. Blow off the 'dust' on the polarizer by using an ionized nitrogen gun, etc..
- K) Mounting screw hole can stand torque 1.3~1.5 Kgf-cm.

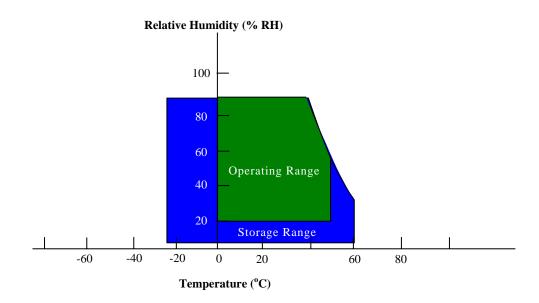

13. Reliability test items

No.	Test item	Conditions
1	High temperature storage test	$Ta = 60 \degree C \qquad 240h$
2	Low temperature storage test	$Ta = -25 ^{\circ}C$ 240h
3	High temperature	Ta = 40 °C; 90%RH 240h, (As remark #3)
	& High humidity operation test	(No condensation)
4	High temperature operation test	$Ta = 50 \degree C \qquad 240h$
		(The panel temp. must be less than 60 $^{\circ}$ C)
5	Low temperature operation test	$Ta = 0 ^{\circ}C \qquad 240h$
6	Vibration test	Frequency : 10 \sim 500 Hz, 1.5Grms
	(non - operating)	Test period: 3hrs (1Hr for each of X, Y, Z)
7	Shock test	Max. Acceleration: 220G
	(Non- operating)	2 ms duration, Half sine wave
		Direction : $\pm X$, $\pm Y$, $\pm Z$; Once for each direction.
8	Altitude test (Operating)	0-10000 feet (3048m) / -20 $^{\circ}$ C / +60 $^{\circ}$ C / 24hr
9	Altitude test (Storage)	0-40000 feet (12192m) / 0 °C/ +55 °C / 24hr

Remark:

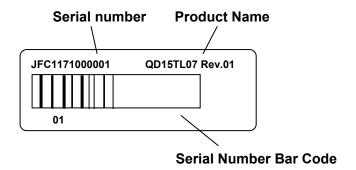

- (1) A failure is defined as the appearance of pixel failured on any color layer or the appearance of horizontal or vertical lines, bars etc.
- (2) Low temperature storage "Panel must return to operating temperature range prior to activation."
- (3) Hi temperature / Humidity test

Max. wet-bulb temperature is less than 39°C ; At glass temperature high than 40°C . Temperature and relative humidity range is shown in the figure below.

14. Others

1) Lot No. Label:

- 2) Adjusting volume has been set optimally before shipment, so do not change any adjusted value. If adjusted value is changed, the specification may not be satisfied.
- 3) Disassembling the module can cause permanent damage and should be strictly avoided.
- 4) Please be careful since image retention may occur when a fixed pattern is displayed for a long time.
- 5) If any problem occurs in relation to the description of this specification, it shall be resolved through discussion with spirit of cooperation.

15. Mechanical Outline Dimension
