### 1. General Description

The LP156WF6 is a Color Active Matrix Liquid Crystal Display with an integral LED backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. This TFT-LCD has 15.6 inches diagonally measured active display area with FHD resolution (1920 horizontal by 1080 vertical pixel array). Each pixel is divided into Red, Green and Blue subpixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 6-bit gray scale signal for each dot, thus, presenting a palette of more than 262,144 colors. The LP156WF6 has been designed to apply the interface method that enables low power, high speed, low EMI. The LP156WF6 is intended to support applications where thin thickness, low power are critical factors and graphic displays are important. In combination with the vertical arrangement of the subpixels, the LP156WF6 characteristics provide an excellent flat display for office automation products such as Notebook PC.

#### **General Features**

Active Screen Size	15.6 inches diagonal
Outline Dimension	359.5(H, Typ.) × 223.80(V, Typ.) × 3.2(D, Max.) [mm](with Bracket & PCB Board)
Pixel Pitch	0.17925 mm X 0.17925 mm
Pixel Format	1920 horiz. By 1080 vert. Pixels RGB strip arrangement
Color Depth	6-bit, 262,144 colors
Luminance, White	300 cd/m <sup>2</sup> (Typ.)
Power Consumption	Total 5.4W (Typ.) Logic: 1.1W (Typ. @ Mosaic), B/L: 4.3W (Typ.)
Weight	350g (Max.) / 340g(Typ.)
Display Operating Mode	Normally Black
Surface Treatment	Anti-glare treatment of the front Polarizer
RoHS Compliance	Yes
BFR / PVC / As Free	Yes for all

### 2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Table 1. ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Val	ues	Units	Notes

Operating Ambient Humidity	Нор	10	90	%RH	1	
Storage Humidity	Нѕт	10	90	%RH	1	

Note: 1. Temperature and relative humidity range are shown in the figure below.

Wet bulb temperature should be 39°C Max, and no condensation of water.

Note: 2. Storage Condition is guaranteed under packing condition.

Differential Impedance	Э	ZLVDS	90	100	110	Ω	

#### Note)

- 1. The measuring position is the connector of LCM and the test conditions are under 25 °C, fv = 60Hz
- 2. The specified  $I_{CC}$  current and power consumption are under the  $V_{CC}$  = 3.3V , 25  $^{\circ}$ C, fv = 60Hz condition and Mosaic pattern.

3. The  $\ensuremath{V_{\text{CC}}}$  rising time is same as the minimum of T1 at Power on sequence.

LED_EN	Low Voltage	VLED_EN_L	0	-	0.3	V	
Life Time			15,000	-	-	Hrs	7

#### Note)

- 1. The measuring position is the connector of LCM and the test conditions are under 25 °C.
- 2. The current and power consumption with LED Driver are under the  $V_{LED} = 12.0 \text{V}$ ,  $25^{\circ}\text{C}$ , PWM Duty 100% and White pattern with the normal frame frequency operated(60Hz).
- 3. The  $V_{LED}$  rising time is same as the minimum of T13 at Power on sequence.

- 4. The operation of LED Driver below minimum dimming ratio may cause flickering or reliability issue.
- 5. If Jitter of PWM is bigger than maximum, it may induce flickering.
- 6. This Spec. is not effective at 100% dimming ratio as an exception because it has DC level equivalent to 0Hz. In spite of acceptable range as defined, the PWM Frequency should be fixed and stable for more consistent brightness control at any specific level desired.
- 7. The life time is determined as the time at which brightness of LCD is 50% compare to that of minimum value specified in table 7. under general user condition.

#### Note)

- 1. Termination resistor is typically integrated into the transmitter and receiver implementations.
- 2. AC Coupling Capacitor is not placed at the sink side.
- 3. In cabled embedded system, it is recommended the system designer ensure that EYE width and voltage are met at the sink side connector pins.

### 3-3-4. eDP AUX Channel Signal

#### Note)

- 1. Termination resistor is typically integrated into the transmitter and receiver implementations.
- 2. AC Coupling Capacitor is not placed at the sink side.
- 3.  $V_{AUX-DIFFp-p} = 2^* \mid V_{AUXP} V_{AUXN} \mid$

### 3-3-5. eDP HPD Signal

Parameter	Symbol	Min	Тур	Max	Unit	Notes
HPD Voltage		2.25	-	3.6	V	Sink side Driving
Hot Plug Detection Threshold	HPD	2.0	-	-	V	Course side Detecting

HPD_IRQ Pulse Width	HPD_IRQ	0.5	-	1.0	ms	
HPD_TimeOut		2.0	-	-	ms	HPD Unplug Event

#### Note)

- HPD IRQ: Sink device wants to notify the Source device that Sink's status has changed so it toggles HPD line, forcing the Source device to read its Link / Sink Receiver DPCD field via the AUX-CH
- 2. HPD Unplug: The Sink device is no longer attached to the Source device and the Source device may then disable its Main Link as a power saving mode
- 3. Plug / Re-plug: The Sink device is now attached to the Source device, forcing the Source device to read its Receiver capabilities and Link / Sink status Receiver DPCD fields via the AUX-CH

### 3-4. Signal Timing Specifications

This is the signal timing required at the input of the User connector. All of the interface signal timing should be satisfied with the following specifications and specifications of eDP Tx/Rx for its proper operation.

**ITEM** Min Unit **Symbol** Max Note Typ **DCLK** 138.7 MHz Frequency  $f_{CLK}$ 2072 2080 2088 Period  $t_{HP}$ Hsync Width 32 32 32  $t_{WH}$  $t_{CLK}$ Width-Active 1920  $t_{WHA}$ 1108 1111 1114 Period  $t_{VP}$ 5 Width 5 5 Vsync  $t_{HP}$  $t_{WV}$ Width-Active 1080  $t_{WVA}$ 72 Horizontal back porch 80 88  $t_{HBP}$  $t_{CLK}$ Horizontal front porch 48 48 48 Data  $t_{HFP}$ Enable Vertical back porch 20 23 24  $t_{VBP}$  $t_{HP}$ 3 5 Vertical front porch  $t_{VFP}$ 

**Table 4. TIMING TABLE** 

**Notice.** all reliabilities are specified for timing specification based on refresh rate of 60Hz. However, LP156WF6 has a good actual performance even at lower refresh rate (e.g. 40Hz or 50Hz) for power saving Mode, whereas LP156WF6 is secured only for function under lower refresh rate. 60Hz at Normal mode, 50Hz, 40Hz at Power save mode. Don't care Flicker level (Power save mode).

### 3-6. Color Input Data Reference

The brightness of each primary color (red, green and blue) is based on the 6-bit gray scale data input for the color; the higher the binary input, the brighter the color. The table below provides a reference for color versus data input.

- Note) 1. Do not insert the mating cable when system turn on.
  - 2. Valid Data have to meet "3-3. eDP Signal Timing Specifications"
  - 3. Video Signal, LED\_EN and PWM need to be on pull-down condition on invalid status.
  - 4. LGD recommend the rising sequence of VLED after the Vcc and valid status of Video Signal turn on.

### 4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' and stable for approximately 20 minutes in a dark environment at 25°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of  $\Phi$  and  $\Theta$  equal to  $\Theta$ .

FIG. 1 presents additional information concerning the measurement equipment and method.

#### Note)

1. It should be measured in the center of screen(1 Point). Contrast Ratio(CR) is defined mathematically as

2. Surface luminance is the average of 5 point across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 2.

$$L_{WH}$$
 = Average(1,2, ... 5 Point)

3. The variation in surface luminance, The panel total variation ( $\delta$  WHITE) is determined by measuring N at each test position 1 through 13 and then defined as following numerical formula. For more information see FIG 2.

$$\delta \text{ WHITE (5P) } = \frac{\text{Maximum (1,2, ... 5 Point)}}{\text{Minimum (1,2, ... 5 Point)}} \qquad \delta \text{ WHITE (13P) } = \frac{\text{Maximum (1,2, ... 13 Point)}}{\text{Minimum (1,2, ... 13 Point)}}$$

- 4. Response time is the time required for the display to transition from black to white (rise time, Tr) and from white to black (falling time, Tf). For additional information see FIG 3.
- 5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.

<Measuring point for Average Luminance & measuring point for Luminance variation>

FIG. 3 Response Time

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

### 5. Mechanical Characteristics

The contents provide general mechanical characteristics for the model LP156WF6. In addition the figures in the next page are detailed mechanical drawing of the LCD.

	Horizontal	359.5 ± 0.5 mm			
Outline Dimension	Vertical	223.80 ± 0.5 mm(with Bracket & PCB Board)			
	Thickness	3.2 mm(max.)			
Bezel Area	Horizontal	347.45 ± 0.5 mm			
Bezei Area	Vertical	196.8 ± 0.5 mm			
Active Display Area	Horizontal	344.16 mm			
Active Display Area	Vertical	193.59 mm

6	Shock test (non-operating)	<ul> <li>No functional or cosmetic defects following a shock to all 6 sides delivering at least 180 G in a half sine pulse no longer than 2 ms to the display module</li> <li>No functional defects following a shock delivering at least 200 g in a half sine pulse no longer than 2 ms to each of 6 sides. Each of the 6 sides will be shock tested with one each display, for a total of 6 displays</li> </ul>
7	Altitude operating storage / shipment	0 ~ 10,000 feet (3,048m) 24Hr 0 ~ 40,000 feet (12,192m) 24Hr

### [ Result Evaluation Criteria ]

- 1. Comparing the initial functional FOS status, there should be no major change which might affect the practical display function when the display reliability test is conducted.
- 2. After conduct reliability tests, LGD guarantees only functional FOS quality.

#### 7. International Standards

#### 9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

#### 9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.
  - Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.
- (10) When handling the LCD module, it needs to handle with care not to give mechanical stress to the PCB and Mounting Hole area."

#### 9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :  $V=\pm\ 200mV(Over\ and\ under\ shoot\ voltage)$
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.

Ver. 1.0 Sep. 04, 2014 26 / 40

#### 9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

#### 9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

#### 9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

#### 9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) The protection film is attached to the polarizer with a small amount of glue. If some stress is applied to rub the protection film against the polarizer during the time you peel off the film, the glue is apt to remain on the polarizer.
  - Please carefully peel off the protection film without rubbing it against the polarizer.
- (3) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the polarizer after the protection film is peeled off.
- (4) You can remove the glue easily. When the glue remains on the polarizer surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.

#### 9-7. THE LGD QA RESPONSIBILITY WILL BE AVOIDED IN CASE OF BELOW

- (1) When the customer attaches TSM(Touch Sensor Module) on LCM without Supplier's approval.
- (2) When the customer attaches cover glass on LCM without Supplier's approval.
- (3) When the LCMs were repaired by 3rd party without Supplier's approval.
- (4) When the LCMs were treated like Disassemble and Rework by the Customer and/or Customer's representatives without supplier's approval.
