1. Handling Precautions

- 1) Since front polarizer is easily damaged, pay attention not to scratch it.
- 2) Be sure to turn off power supply when inserting or disconnecting from input connector.
- 3) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- 4) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- 5) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface.
- 6) Since CMOS LSI is used in this module, take care of static electricity and insure human earth when handling.
- 7) Do not open nor modify the Module Assembly.
- 8) Do not press the reflector sheet at the back of the module to any directions.
- 9) In case if a Module has to be put back into the packing container slot after once it was taken out from the container, do not press the center of the CCFL Reflector edge. Instead, press at the far ends of the CCFL Reflector edge softly. Otherwise the TFT Module may be damaged.
- 10) At the insertion or removal of the Signal Interface Connector, be sure not to rotate nor tilt the Interface Connector of the TFT Module.
- 11) After installation of the TFT Module into an enclosure (Notebook PC Bezel, for example), do not twist nor bend the TFT Module even momentary. At designing the enclosure, it should be taken into consideration that no bending/twisting forces are applied to the TFT Module from outside. Otherwise the TFT Module may be damaged.
- 12) Cold cathode fluorescent lamp (CCFL) in LCD contains a small amount of mercury. Please follow local ordinances or regulations for disposal.
- 13) Small amount of materials having no flammability grade is used in the LCD module. The LCD module should be supplied by power complied with requirements of Limited Power Source (IEC60950 or UL1950), or be applied exemption.
- 14) The LCD module is designed so that the CCFL in it is supplied by Limited Current Circuit (IEC60950 or UL1950). Do not connect the CCFL in Hazardous Voltage Circuit.

AU OPTRONICS CORPORATION

2. General Description

B156XW01 V1 is a Color Active Matrix Liquid Crystal Display composed of a TFT LCD panel, a driver circuit, and backlight system. The screen format is intended to support the HD (1366(H) x 768(V)) screen and 262k colors (RGB 6-bits data driver) without backlight inverter. All input signals are LVDS interface compatible.

B156XW01 V1 is designed for a display unit of notebook style personal computer and industrial machine.

2.1 General Specification

| Items | Unit | | Speci | fications | | | |
|-----------------------------|---------------------------|-------------------|--------------|-----------|-------|--|--|
| Screen Diagonal | [mm] | 394.9 (15.6W'') | | | | | |

Note 1: 5 points position (Ref: Active area)

Note 2: 13 points position (Ref: Active area)

Note 3: The luminance uniformity of 5 or 13 points is defined by dividing the maximum luminance values by the minimum test point luminance

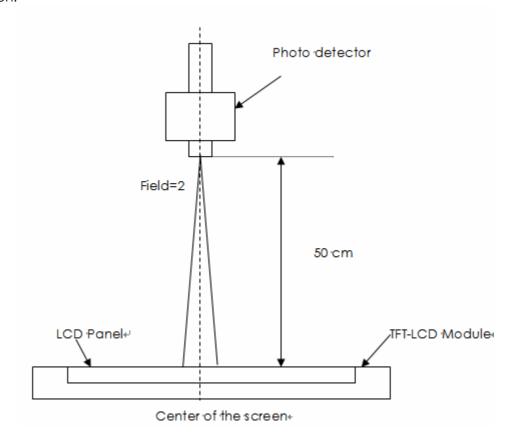

| S | = - | Maximum Brightness of five points |
|--------------|-----|---------------------------------------|
| δw5 | | Minimum Brightness of five points |
| c | _ | Maximum Brightness of thirteen points |
| δ w13 | _ | Minimum Brightness of thirteen points |

AU OPTRONICS CORPORATION

Note 4: Measurement method

The LCD module should be stabilized at given temperature for 30 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting Backlight for 30 minutes in a stable, windless and dark room, and it should be measured in the center of screen.

Note 5: Definition of Average Luminance of White (Y_L):

Measure the luminance of gray level 63 at 5 points \cdot $Y_L = [L (1) + L (2) + L (3) + L (4) + L (5)] / 5 L (x) is corresponding to the luminance of the point X at Figure in Note (1).$

Note 6: Definition of contrast ratio:

Contrast ratio is calculated with the following formula.

Contrast ratio (CR)= $\frac{\text{Brightness on the "White" state}}{\text{Brightness on the "Black" state}}$

AU OPTRONICS CORPORATION

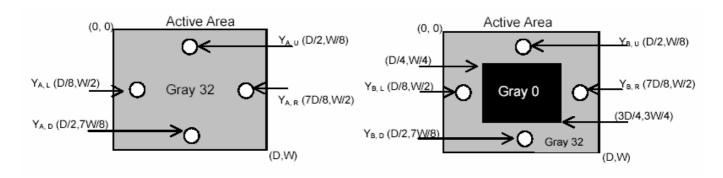

Note 7: Definition of Cross Talk (CT)

$$CT = | Y_B - Y_A | / Y_A \times 100 (\%)$$

Where

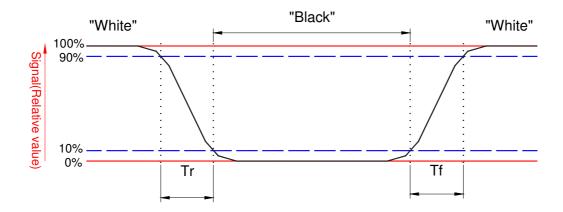

Y_A = Luminance of measured location without gray level 0 pattern (cd/m₂)

 Y_B = Luminance of measured location with gray level 0 pattern (cd/m₂)

Note 8: Definition of response time:

The output signals of BM-7 or equivalent are measured when the input signals are changed from "Black" to "White" (falling time) and from "White" to "Black" (rising time), respectively. The response time interval between the 10% and 90% of amplitudes. Refer to figure as below.

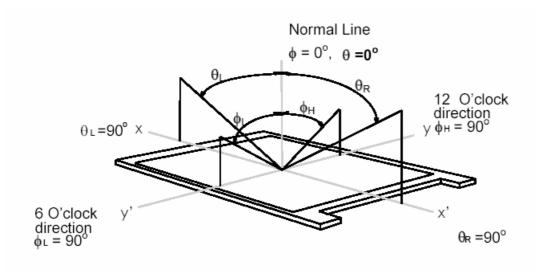

AU OPTRONICS CORPORATION

Note 9. Definition of viewing angle

Viewing angle is the measurement of contrast ratio \geq 10, at the screen center, over a 180° horizontal and 180° vertical range (off-normal viewing angles). The 180° viewing angle range is broken down as follows; 90° (θ) horizontal left and right and 90° (Φ) vertical, high (up) and low (down). The measurement direction is typically perpendicular to the display surface with the screen rotated about its center to develop the desired measurement viewing angle.

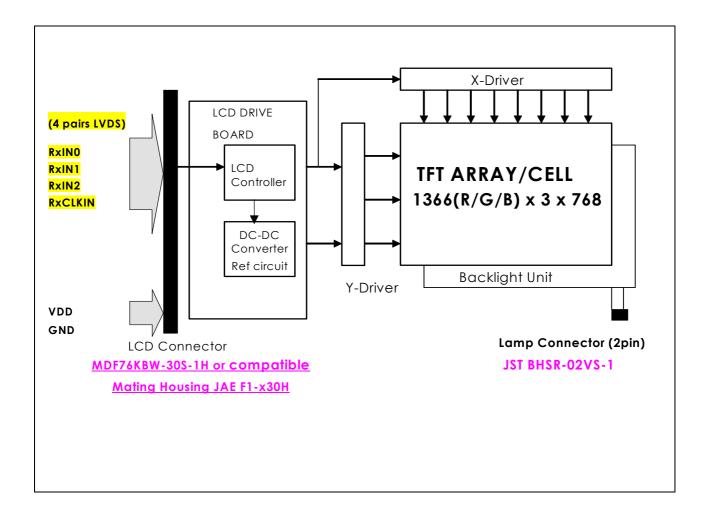

AU OPTRONICS CORPORATION

3. Functional Block Diagram

The following diagram shows the functional block of the 15.6 inches wide Color TFT/LCD Module:

AU OPTRONICS CORPORATION

4. Absolute Maximum Ratings

An absolute maximum rating of the module is as following:

4.1 Absolute Ratings of TFT LCD Module

| Item | Symbol | Min | Max | Unit | Conditions |
|-----------------|--------|------|------|--------|------------|
| Logic/LCD Drive | Vin | -0.3 | +4.0 | [Volt] | Note 1,2 |

4.2 Absolute Ratings of Backlight Unit

| Item | Symbol | Min | Max | Unit | Conditions |
|--------------|--------|-----|-----|----------|------------|
| CCFL Current | ICCFL | - | 7.0 | [mA] rms | Note 1,2 |

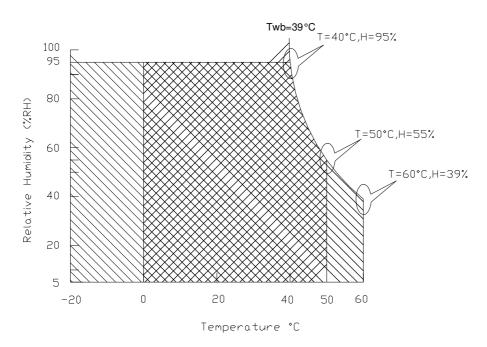

4.3 Absolute Ratings of Environment

| Item | Symbol | Min | Max | Unit | Conditions | | |
|---------------------|--------|-----|-----|-------|------------|--|--|
| Operating | TOP | 0 | +50 | [°C] | Note 3 | | |
| Operation Humidity | HOP | 5 | 95 | [%RH] | Note 3 | | |
| Storage Temperature | TST | -20 | +60 | [°C] | Note 3 | | |
| Storage Humidity | HST | 5 | 95 | [%RH] | Note 3 | | |

Note 1: At Ta (25℃)

Note 2: Permanent damage to the device may occur if exceed maximum values

Note 3: For quality performance, please refer to AUO IIS (Incoming Inspection Standard).

5. Electrical characteristics

5.1 TFT LCD Module

5.1.1 Power Specification

Input power specifications are as follows;

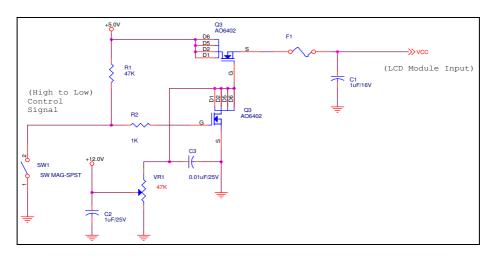

The power specification are measured under 25°C and frame frenquency under 60Hz

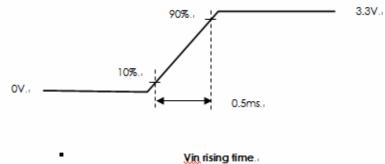

| Symble | Parameter | Min | Тур | Max | Units | Note |
|--------|--------------------------------|-----|-----|------|--------|----------|
| VDD | Logic/LCD Drive Voltage | 3.0 | 3.3 | 3.6 | [Volt] | |
| PDD | VDD Power | _ | - | 1.5 | [Watt] | Note 1/2 |
| IDD | IDD Current | - | 350 | 450 | [mA] | Note 1/2 |
| IRush | Inrush Current | ı | - | 1500 | [mA] | Note 3 |
| VDDrp | Allowable | _ | _ | 100 | [mV] | |
| | Logic/LCD Drive Ripple Voltage | | | | р-р | |

Note 1: Maximum Measurement Condition: Black Pattern

Note 2: Typical Measurement Condition: Mosaic Pattern

Note 3: Measure Condition

5.1.2 Signal Electrical Characteristics

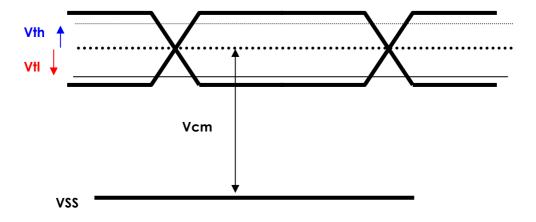

Input signals shall be low or High-impedance state when VDD is off.

It is recommended to refer the specifications of THC63LVDF84A (Thine Electronics Inc.) in detail.

Signal electrical characteristics are as follows;

| Parameter | Condition | Min | Max | Unit |
|-----------|---|-------|-------|------|
| Vth | Differential Input High Threshold (Vcm=+1.2V) | - | 100 | [mV] |
| VtI | Differential Input Low Threshold (Vcm=+1.2V) | -100 | - | [mV] |
| Vcm | Differential Input Common Mode Voltage | 1.125 | 1.375 | [V] |

Note: LVDS Signal Waveform

5.2 Backlight Unit

CCFL Parameter guideline for CCFL Inverter selection (Ref. Remark 1)

| Parameter | Min | Тур | Max | Units | Condition |
|----------------------------------|--------|------|------|------------|-----------------------|
| CCFL current(ICCFL) | 2.0 | 6.0 | 7.0 | [mA] rms | (Ta=25°C) |
| | | | | | Note 1, 6 |
| CCFL Frequency(FCCFL) | 45 | 60 | 80 | [KHz] | (Ta=25°C) Note 2,3 |
| CCFL startup Voltage(Vs) | | | 1520 | [Volt] rms | (Ta=0°C) Note 4 |
| CCFL startup Voltage(Vs) | | | 1265 | [Volt] rms | (Ta= 25°C) Note 4 |
| CCFL Voltage (Reference) (VCCFL) | - | 720 | 800 | [Volt] rms | (Ta=25°C) Note 5 |
| CCFL Power consumption (PCCFL) | - | 4.40 | 4.80 | [Watt] | (Ta=25°C) Note 5 |
| CCFL Life-Time | 12,000 | - | _ | Hour | (Ta=25°C) |
| | 12,000 | | | | Note 7 |

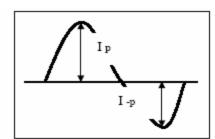

To optimun TFT LCD performance, the LAMP inverter PWM Frequesncy define as:210 +/-5 Hz

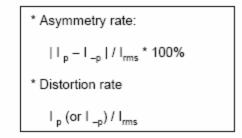

Remark 1: Typ are AUO recommended Design Points.

- 1-1 All of characteristics listed are measured under the condition using the AUO Test inverter.
- 1-2 In case of using an inverter other than listed, it is recommended to check the inverter carefully. Sometimes, interfering noise stripes appear on the screen, and substandard luminance or flicker at low power may happen.
- 1-3 In designing an inverter, it is suggested to check safety circuit very carefully. Impedance of CCFL, for instance, becomes more than 1 [M ohm] when CCFL is damaged.
- 1-4 Generally, CCFL has some amount of delay time after applying starting voltage. It is recommended to keep on applying starting voltage for 1 [Sec] until discharge.
- 1-5 CCFL discharge frequency must be carefully chosen so as not to produce interfering noise stripes on the screen.
- 1-6 Reducing CCFL current increases CCFL discharge voltage and generally increases CCFL discharge frequency. So all the parameters of an inverter should be carefully designed so as not to produce too much leakage current from high-voltage output of the inverter.

- Note 1: It should be employed the inverter which has "Duty Dimming", if ICCFL is less than 4mA.
- Note 2: CCFL discharge frequency should be carefully determined to avoid interference between inverter and TFT LCD.
- Note 3: The frequency range will not affect to lamp life and reliability characteristics.
- Note 4: The output voltage of inverter should be able to give out a power after ballast capacitor, the generating capacity has to be larger than a lamp startup voltage, otherwise backlight may has blinking for a moment after turns on or can not be turned on.
- Note 5: Calculator value for reference (ICCFL×VCCFL=PCCFL)
- Note 6: Requirements for a system inverter design, which is intended to have a better display performance, a better power efficiency and a more reliable lamp, are following. It shall help increase the lamp lifetime and reduce leakage current.
 - a. The asymmetry rate of the inverter waveform should be less than 10%.
 - b. The distortion rate of the waveform should be within $\sqrt{2} \pm 10\%$.
 - * Inverter output waveform had better be more similar to ideal sine wave.

Note 7: It is an edge-type BLU with single CCFL, the life-time define as the brightness decay to 50% of original value and under normal operation.

AU OPTRONICS CORPORATION

6. Signal Characteristic

6.1 Pixel Format Image

Following figure shows the relationship of the input signals and LCD pixel format.

| T5 | 200 | - | - | (ms) |
| T6 | 200 | - | - | (ms) |
| Т7 | 0 | - | 10 | (ms) |

AU OPTRONICS CORPORATION

7. Connector Description

Physical interface is described as for the connector on module.

These connectors are capable of accommodating the following signals and will be following components.

7.1 TFT LCD Module

| Connector Name / Designation | For Signal Connector |
|------------------------------|----------------------|
| Manufacturer | HIROSE or compatible |
| Type / Part Number | MDF76KBW-30S-1H |
| Mating Housing/Part Number | |

7.2 Backlight Unit

Physical interface is described as for the connector on module.

These connectors are capable of accommodating the following signals and will be following components.

| Connector Name / Designation | For Lamp Connector |
|------------------------------|--------------------|
| Manufacturer | JST |
| Type / Part Number | BHSR-02VS-1 |
| Mating Type / Part Number | SM02B-BHSS-1-TB |

7.3 Signal for Lamp connector

| Pin # | Cable color | Signal Name |
|-------|-------------|-------------------|
| 1 | RED | Lamp High Voltage |
| 2 | White | Lamp Low Voltage |

AU OPTRONICS CORPORATION

8. Dynamic Test

8.1 Vibration Test

Test condition:

Acceleration: 1.5 G, sine wave

Frequency: 10 - 500Hz

Sweep: 30 Minutes each Axis (X, Y, Z)

8.2 Shock Test Spec:

Test condition:

• Acceleration: 220 G, Half sine wave

Active time: 2 ms

• Pulse: +/-X,+/-Y,+/-Z, one time for each side

Remark:

1. Ambient condition is $25 \pm 5^{\circ}$ C, Relative humidity: $40\% \sim 70\%$

2. Non-packaged and Non-operation

9. Reliability

| Items Required Condition | | Note |
|-------------------------------|--|--------|
| Temperature Humidity Bias | Ta= 40°C, 90%RH, 300h | |
| High Temperature Operation | Ta= 50°C, Dry, 300h | |
| Low Temperature Operation | Ta= 0°C, 300h | |
| High Temperature Storage | Ta= 60°C, 35%RH, 300h | |
| Low Temperature Storage | Ta= -20°C, 50%RH, 300h | |
| Thermal Shock Test | Ta=-20°C to 60°C, Duration at 30 min, 100 cycles | |
| ESD | Contact: ±8 KV Air: ±15 KV | Note 1 |

Note1: According to EN 61000-4-2, ESD class B: Some performance degradation allowed. No data lost . Self-recoverable. No hardware failures.

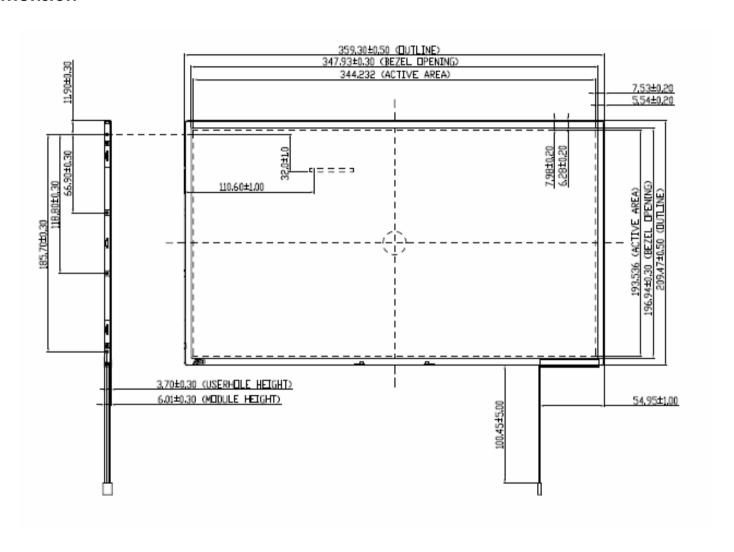

Remark: MTBF (Excluding the CCFL): 30,000 hours with a confidence level 90%

AU OPTRONICS CORPORATION

10. Mechanical Characteristics

10.1 LCM Outline Dimension

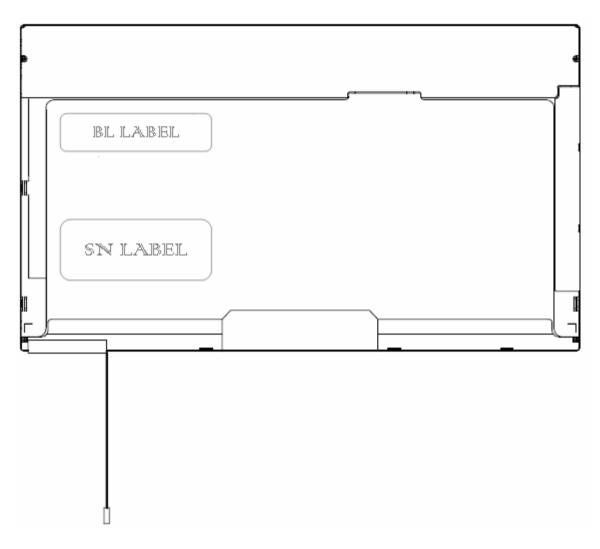

27 of 34

AU OPTRONICS CORPORATION

Note: Prevention IC damage, IC positions not allowed any overlap over these areas.

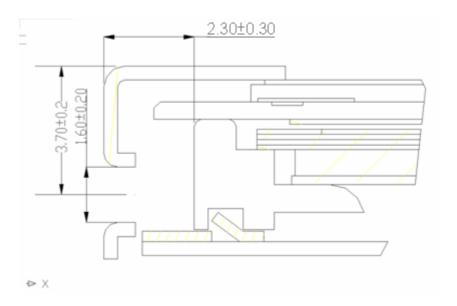

10.2 Screw Hole Depth and Center Position

Screw hole minimum depth, from side surface = 2.30±0.30 mm (Ref. drawing)

Screw hole center location, from front surface = 3.7 ± 0.2 mm (Ref. drawing) Screw Torque: Maximum 2.5 kgf-cm

11. Shipping and Package

11.1 Shipping Label Format

XXXXXXXXXXXXXX-XXXXXX

CT:CAHGB01XXXXXXX

Manufactured 07/52 Model No: B156XW01 V.1 **AU Optronics** MADE IN CHINA (\$03)

H/W: 1A F/W:1

c 🎵 us E204356

TAXXG

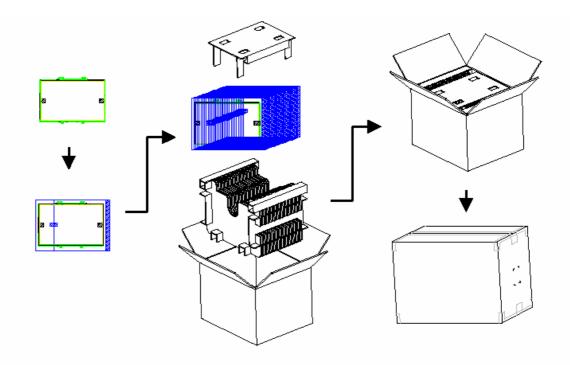

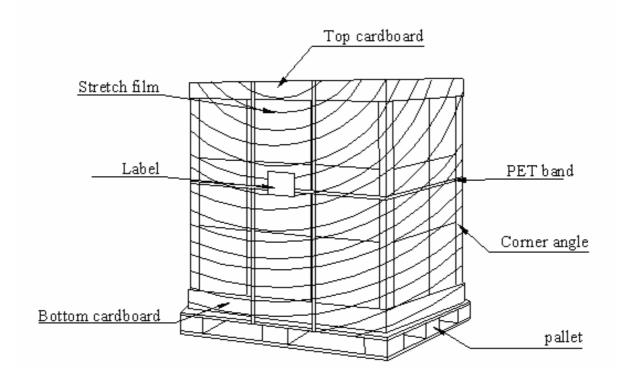

AU OPTRONICS CORPORATION

11.2 Carton package

The outside dimension of carton is 455 (L)mm x 380 (W)mm x 355 (H)mm

11.3 Shipping package of palletizing sequence

12. Appendix: EDID description
