#### 4.0 OPTICAL SPECIFICATION

#### 4.1 Overview

The test of view angle range shall be measured in a dark room (ambient luminance  $\leq$  1lux and temperature =  $25\pm2\,^{\circ}\mathrm{C}$ ) with the equipment of Luminance meter system (Goniometer system and TOPCON BM-5A) and test unit shall be located at an approximate distance 50cm from the LCD surface at a viewing angle of  $\theta$  and  $\Phi$  equal to 0°. We refer to  $\theta \varnothing = 0$  (=03) as the 3 o'clock direction (the "right"),  $\theta \varnothing = 90$  (=012) as the 12 o'clock direction ("upward"),  $\theta \varnothing = 180$  (=09) as the 9 o'clock direction ("left") and  $\theta \varnothing = 270 (=06)$  as the 6 o'clock direction ("bottom"). While scanning  $\theta$  and/or  $\varnothing$ , the center of the measuring spot on the Display surface shall stay fixed. The luminance, color and uniformity should be tested by CA210. The backlight should be operating for 30 minutes prior to measurement. VDD shall be 3.3  $\pm$  0.3V at 25°C. Optimum viewing angle direction is 6 'clock.

- Notes: 1. Viewing angle is the angle at which the contrast ratio is greater than 10. The viewing angles are determined for the horizontal or 3, 9 o'clock direction and the vertical or 6, 12 o'clock direction with respect to the optical axis which is normal to the LCD surface (see FIGURE 1).
  - Contrast measurements shall be made at viewing angle of Θ= 0 and at the center of the LCD surface. Luminance shall be measured with all pixels in the view field set first to white, then to the dark (black) state. (see FIGURE 1) Luminance Contrast Ratio (CR) is defined mathematically.

- 3. The electro-optical response time measurements shall be made as FIGURE 3 by switching the "data" input signal ON and OFF. The times needed for the luminance to change from 10% to 90% is Tr, and 90% to 10% is Td.
- 4. Cross-Talk of one area of the LCD surface by another shall be measured by comparing the luminance (YA) of a 25mm diameter area, with all display pixels set to a gray level, to the luminance (YB) of that same area when any adjacent area is driven dark. (See FIGURE 4).

#### 4.3 Optical measurements

Figure 1. Measurement Set Up

View angel range measurement setup Luminance, uniformity and color measurement setup

Figure 2. White Luminance and Uniformity Measurement Locations (9points)

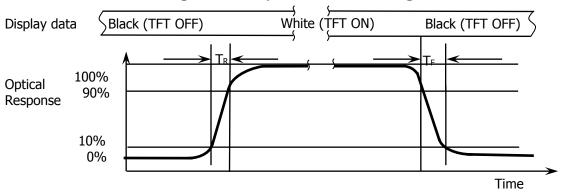

Center Luminance of white is defined as luminance values of center 9points across the LCD surface. Luminance shall be measured with all pixels in the view field set first to white. This measurement shall be taken at the locations shown in FIGURE 2 for a total of the measurements per display.

The White luminance uniformity on LCD surface is then expressed as :  $\Delta Y9 = Minimum Luminance of 9 points / Maximum Luminance of 9 points (see FIGURE 2).$

Figure 3. Response Time Testing

The electro-optical response time measurements shall be made as shown in FIGURE 3 by switching the "data" input signal ON and OFF. The times needed for the luminance to change from 10% to 90% is Tr and 90% to 10% is Td.

Figure 4. Cross Modulation Test Description

Where:

 $Y_A$  = Initial luminance of measured area (cd/m<sup>2</sup>)

Y<sub>B</sub> = Subsequent luminance of measured area (cd/m²)

The location measured will be exactly the same in both patterns

Cross-Talk of one area of the LCD surface by another shall be measured by comparing the luminance (YA) of a 25mm diameter area, with all display pixels set to a gray level, to the luminance (YB) of that same area when any adjacent area is driven dark (Refer to FIGURE 4).

The Reliability test items and its conditions are shown in below.

<Table 10. Reliability test>

No	Test Items Conditions	
1	High temperature storage test	Ta = 80 °C, 240 hrs
2	Low temperature storage test	Ta = -20 °C, 240 hrs
3	High temperature & high humidity operation test	Ta = 60 ℃, 90%RH, 240 hrs
4	High temperature operation test	Ta = 60 °C, 240 hrs
5	Low temperature operation test	Ta = -20 ℃, 240hrs
6	Thermal shock	Ta = -20 $^{\circ}$ C $\leftrightarrow$ 70 $^{\circ}$ C (30min), 100 cycle

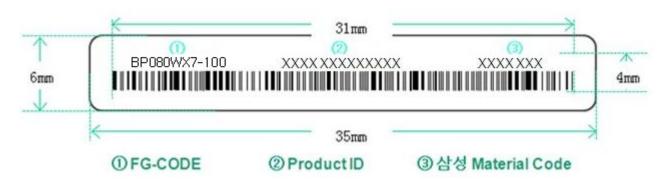

#### 13.0 HANDLING & CAUTIONS

- (1) Cautions when taking out the panel
  - Pick the pouch only, when taking out panel from a shipping package.
- (2) Cautions for handling the module
  - As the electrostatic discharges may break the LCD panel, handle the LCD panel with care. Peel a protection sheet off from the LCD panel surface as slowly as possible.
  - As the surface of the polarizer is very soft and easily scratched, use a soft dry cloth without chemicals for cleaning.
  - Put the panel display side down on a flat horizontal plane.
  - Handle connectors and cables with care.
- (3) Cautions for the atmosphere
  - Dew drop atmosphere should be avoided.
  - Do not store and/or operate the LCD panel in a high temperature and/or humidity atmosphere. Storage in an electro-conductive polymer packing pouch and under relatively low temperature atmosphere is recommended.
- (4) Cautions for the panel characteristics
  - Do not apply fixed pattern data signal to the LCD module at product aging.
  - Applying fixed pattern for a long time may cause image sticking.
