1.0 GENERAL DESCRIPTION

1.1 Introduction

HannStar Display model HSD170MGW1-C00 is a color active matrix thin film transistor (TFT) liquid crystal display (LCD) that uses amorphous silicon TFT as a switching device. This model is composed of a TFT LCD panel, a driving circuit and a back light system. This TFT LCD has a 17.0 inch diagonally measured active display area with XGA resolution (900 vertical by 1440 horizontal pixel array) and can display up to 16.2M (6-bit+FRC)colors.

1.2 Features

- 17.0 WXGA+ for Monitor application
- High Resolution: 1440*900
- 2-ch LVDS interface system
- LCD Timing Controller
- Wide Viewing Angle
- RoHS compatible

1.3 Applications

- Desktop Monitor
- Display terminals for AV applications
- Display terminals for industrial applications

1.4 General information

Item		Specification	Unit
Outline Dimension		389.2 x 254.5 x 11.5 (Typ)	mm
Display area		367.2 (H) x 229.5 (V)	mm
Number of Pixel		1440(H) x 900(V)	pixels
Pixel pitch		0.255(H) x 0.255(V)	mm
Pixel arrangement		RGB Vertical stripe	
Display color		16.2M (6-bit+FRC)	colors
Color Gamut		63% NTSC	
Display mode		Normally white	
Surface treatment		Glare (3H)	
Weight		1365	g
Back-light		2-CCFLs, Top & bottom edge side	
Input signal		2-ch LVDS	
Power Consumption	Logic System	3.0(TYP.)	W
	B/L System	11.76(TYP.)	W

3.2 Measuring Condition

- Measuring surrounding: dark room
- Lamp current I_{BL}: 7.5±0.1mA, lamp freq. F_L=50 KHz, Inverter: TDK TBD315NR-1
- V_{DD}=5.0V, f_V=60Hz
- Ambient temperature: 25±2°C
- 30min. Warm-up time.

3.3 Measuring Equipment

- FPM520 of Westar Electric Corp., which utilized SR-3 for Chromaticity and BM-5A for other optical characteristics.
- Measuring spot size: 20~21mm

Note (1) Definition of Viewing Angle:

Note (2) Definition of Contrast Ratio (CR): measured at the center point of panel
$$CR = \frac{\text{Luminance with all pixels white (L63)}}{\text{Luminance with all pixels black (L0)}}$$

Note (3) Definition of Response Time: Sum of T_R and T_F

6.2 Back-Light Unit

The back- light system is an edge-lighting type with 2 CCFL.

The characteristic of the lamp is shown in the following tables.

Item	Symbol	Min.	Typ.	Max.	Unit	Note
Lamp current	IL	3.0	7.5	8.0	mA(rms)	(1)(6)
Lamp voltage	VL	589.5	655	769.5	V(rms)	(6) I_L=7.5mA
Frequency	fL	40	50	60	KHz	(2)
Operating lamp life time	Hr	40,000	-	-	Hour	(3) I_L=7.5mA
Startup voltage	Vs	1200	-	-	V(rms)	(4)(5) at 25°C
		1400				(4)(5) at 0°C

Note (1) Lamp current is measured with current meter for high frequency as shown below. Specified valued are for single lamp.
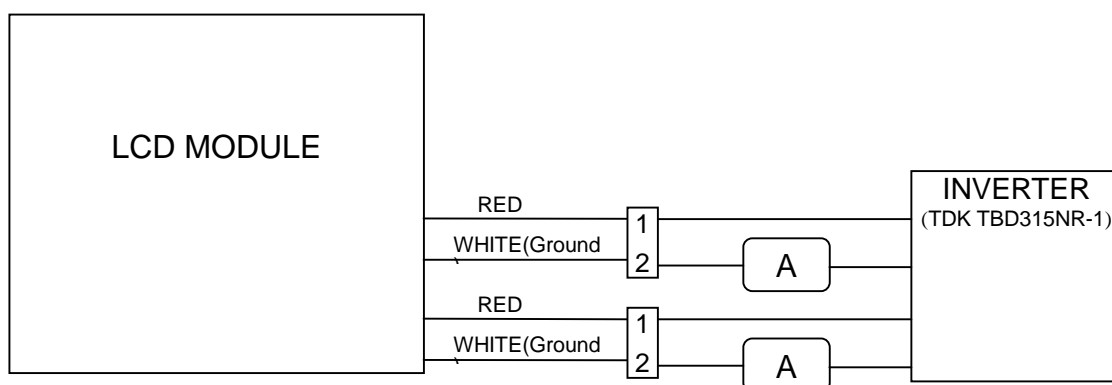

Note (2) Lamp frequency may produce interference with horizontal synchronous frequency and this may cause ripple noise on the display. Therefore lamp frequency shall be kept away from the horizontal synchronous frequency and its harmonics as far as possible in order to avoid interference.

*Suggest the inverter frequency avoid fL=41~49KHz

Note (3) Lamp life time (Hr) can be defined as the time in which it continues to operate under the condition: Ta=25±3 ^{o}C, typical IL value indicated in the above table until the brightness becomes less than 50%.

Note (4) CCFL inverter should be able to provide a voltage over specified value (Vs) in the above table. Lamp units need at least Vs value shown above to ignition.

Note (5) The voltage over specified value (Vs) should be applied to the lamp more than 1 second after startup. Otherwise, the lamp may not be turned on. The used lamp current is the lamp typical current.

HannStar Display Corp.

Document Title	HSD170MGW1 Formal Specification	Page No.	19 / 29
Document No.		Revision	1.0

Note (6) The output voltage waveform and current waveform of the inverter must be symmetrical (Unsymmetrical ratio is less than 10%). Please do not use the inverter which has unsymmetrical voltage and current waveform, and spike waveform. The inverter design which can provide the best optical performance, power efficiency, and lamp life should under the following conditions.

a. The asymmetry rate of the inverter waveform should be less than 10%.

b. The distortion tae of the waveform should be within $\sqrt{2}\pm10\%$.

c. The inverter output waveform should be better similar to the ideal sine wave.
Asymmetry rate = |Ip-I-p| / Irms x 100%
Distortion rate = Ip (or I-p) / Irms

6.6 Power ON/OFF Sequence
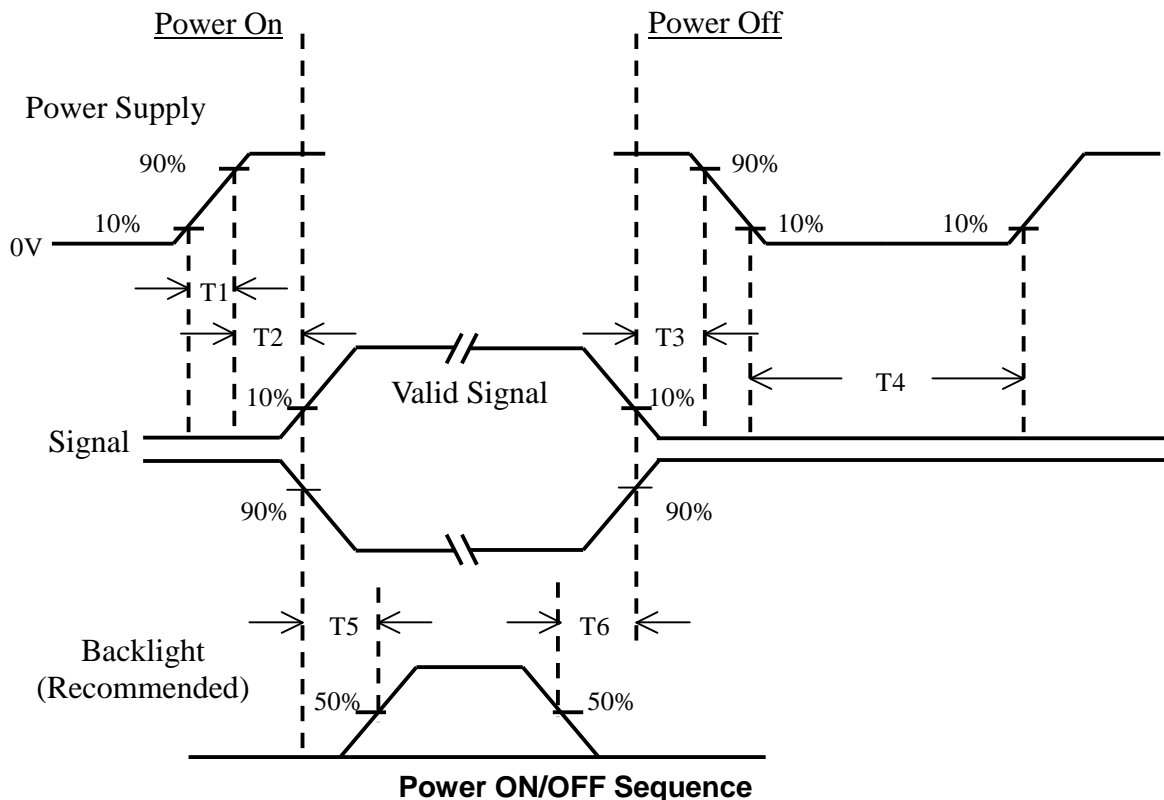

Power ON/OFF Sequence

500 usec < T1 ≤ 10 msec   Back-light:

0 < T2 ≤ 50 msec   200 ms ≤ T5

0 < T3 ≤ 50 msec: 200 msec < T6

200 ms ≤ T4

Note (1) Apply the lamp volatge within the LCD operation range. When the back-light
turns on before the LCD operation or the LCD truns off before the back-light
turns off. the display may momentarily become white.

(2) In case of V_{DD} = off level, please keep the level of input signal on 0 voltage.

(3) T4 should be measured after the module has been fully discharged between
power off and on period.

Document Title	HSD170MGW1 Formal Specification	Page No.	29 / 29
Document No.		Revision	1.0

10.0 GENERAL PRECAUTION

10.1 Use Restriction

This product is not authorized for use in life supporting systems, aircraft navigation control systems, military systems and any other application where performance failure could be life-threatening or otherwise catastrophic.

10.2 Disassembling or Modification

Do not disassemble or modify the module. It may damage sensitive parts inside LCD module, and may cause scratches or dust on the display. HannStar does not warrant the module, if customers disassemble or modify the module.

10.3 Breakage of LCD Panel

10.3.1 If LCD panel is broken and liquid crystal spills out, do not ingest or inhale liquid crystal, and do not contact liquid crystal with skin.

10.3.2 If liquid crystal contacts mouth or eyes, rinse out with water immediately.

10.3.3 If liquid crystal contacts skin or cloths, wash it off immediately with alcohol and rinse thoroughly with water.

10.3.4 Handle carefully with chips of glass that may cause injury, when the glass is broken.

10.4 Electric Shock

10.4.1 Disconnect power supply before handling LCD module.

10.4.2 Do not pull or fold the CCFL cable.

10.4.3 Do not touch the parts inside LCD modules and the fluorescent lamp's connector or cables in order to prevent electric shock.

10.5 Absolute Maximum Ratings and Power Protection Circuit

10.5.1 Do not exceed the absolute maximum rating values, such as the supply voltage variation, input voltage variation, variation in parts' parameters, environmental temperature, etc., otherwise LCD module may be damaged.

10.5.2 Please do not leave LCD module in the environment of high humidity and high temperature for a long time.

10.5.3 It's recommended to employ protection circuit for power supply.

10.6 Operation

10.6.1 Do not touch, push or rub the polarizer with anything harder than HB pencil lead.

10.6.2 Use fingerstalls of soft gloves in order to keep clean display quality, when persons handle the LCD module for incoming inspection or assembly.

10.6.3 When the surface is dusty, please wipe gently with absorbent cotton or other soft material.

HannStar Display Corp.

Document No.		Revision	1.0

10.6.4 Wipe off saliva or water drops as soon as possible. If saliva or water drops contact with polarizer for a long time, they may causes deformation or color fading.

10.6.5 When cleaning the adhesives, please use absorbent cotton wetted with a little petroleum benzine or other adequate solvent.

10.7 Mechanism

Please mount LCD module by using mouting holes arranged in four corners tightly.

10.8 Static Electricity

10.8.1 Protection film must remove very slowly from the surface of LCD module to prevent from electrostatic occurrence.

10.8.2 Because LCD module use CMOS-IC on circuit board and TFT-LCD panel, it is very weak to electrostatic discharge. Please be careful with electrostatic discharge.

Persons who handle the module should be grounded through adequate methods.

10.9 Strong Light Exposure

The module shall not be exposed under strong light such as direct sunlight. Otherwise, display characteristics may be changed.

10.10 Disposal

When disposing LCD module, obey the local environmental regulations.
